Part I Tools

1	Introduction: The Statement of Loewner's Theorem	3
2	Some Generalities	11
3	The Herglotz Representation Theorems and the Easy Direction of Loewner's Theorem	17
4	Monotonicity of the Square Root	33
5	Loewner Matrices	43
6	Heinävaara's Integral Formula and the Dobsch–Donoghue Theorem	73
7	$\mathcal{M}_{n+1} \neq \mathcal{M}_n$	85
8	Heinävaara's Second Proof of the Dobsch–Donoghue Theorem	89
9	Convexity, I: The Theorem of Bendat–Kraus–Sherman–Uchiyama ..	95
10	Convexity, II: Concavity and Monotonicity	107
11	Convexity, III: Hansen–Jensen–Pedersen (HJP) Inequality	117
12	Convexity, IV: Bhatia–Hiai–Sano (BHS) Theorem	123
13	Convexity, V: Strongly Operator Convex Functions	135
14	2 × 2 Matrices: The Donoghue and Hansen–Tomiyama Theorems ...	145
15	Quadratic Interpolation: The Foiaş–Lions Theorem	153

Part II Proofs of the Hard Direction

16	Pick Interpolation, I: The Basics	165
17	Pick Interpolation, II: Hilbert Space Proof	175
18	Pick Interpolation, III: Continued Fraction Proof	183

19	Pick Interpolation, IV: Commutant Lifting Proof	189
20	A Proof of Loewner's Theorem as a Degenerate Limit of Pick's Theorem	215
21	Rational Approximation and Orthogonal Polynomials	221
22	Divided Differences and Polynomial Approximation	235
23	Divided Differences and Multipoint Rational Interpolation	247
24	Pick Interpolation, V: Rational Interpolation Proof	263
25	Loewner's Theorem via Rational Interpolation: Loewner's Proof ...	267
26	The Moment Problem and the Bendat–Sherman Proof	273
27	Hilbert Space Methods and the Korányi Proof	283
28	The Krein–Milman Theorem and Hansen's Variant of the Hansen–Pedersen Proof	289
29	Positive Functions and Sparr's Proof	301
30	Ameur's Proof Using Quadratic Interpolation	313
31	One-Point Continued Fractions: The Wigner–von Neumann Proof ..	321
32	Multipoint Continued Fractions: A New Proof	333
33	Hardy Spaces and the Rosenblum–Rovnyak Proof	339
34	Mellin Transforms: Boutet de Monvel's Proof	345
35	Loewner's Theorem for General Open Sets	359
 Part III Applications and Extensions		
36	Operator Means, I: Basics and Examples	373
37	Operator Means, II: Kubo–Ando Theorem	379
38	Lieb Concavity and Lieb–Ruskai Strong Subadditivity Theorems, I: Basics	385
39	Lieb Concavity and Lieb–Ruskai Strong Subadditivity Theorems, II: Effros' Proof	393
40	Lieb Concavity and Lieb–Ruskai Strong Subadditivity Theorems, III: Ando's Proof	395
41	Lieb Concavity and Lieb–Ruskai Strong Subadditivity Theorems, IV: Aujla–Hansen–Uhlmann Proof	397
42	Unitarily Invariant Norms and Rearrangement	399
43	Unitarily Invariant Norm Inequalities	409

A	Boutet de Monvel's Note	415
B	Pictures	423
C	Symbol List	427
	Bibliography	433
	Name Index	447
	Subject Index	453
