Contents

List of Contributors	ix
Preface	xi
Contents of Volumes 1–27	xiii
1. Fundamentals of magnetocaloric effect in magnetic shape memory alloys	1
<i>Volodymyr A. Chernenko, Victor A. L'vov, Eduard Cesari, and Jose M. Barandiaran</i>	
1 Magnetocaloric effect and magnetocaloric materials	2
1.1 Magnetocaloric effect in ferromagnetic solids	2
1.2 Magnetocaloric materials	3
1.3 Magnetocaloric effects exhibited by Heusler-type magnetic shape memory alloys	5
2 Traditional thermodynamic description of magnetocaloric effect	10
3 Alternative theoretical approach for description of magnetocaloric effect in shape memory alloys	12
4 Magnetocaloric effect in metamagnetic shape memory alloy: experiment and theory	19
4.1 Representative experimental data	19
4.2 Modeling the temperature dependence of magnetization	21
4.3 Calculation of field-induced entropy change	24
5 Heat capacity of metamagnetic shape memory alloy	27
5.1 Problem formulation and preliminary analysis of experimental data	27
5.2 Theoretical analysis and computations	29
6 Magnetocaloric effect caused by paramagnetic austenite—ferromagnetic martensite phase transformation	34
Acknowledgments	40
References	40
2. Magnetically ordered compounds of transition elements with nonmetals	47
<i>Yvonne Andersson and Per Nordblad</i>	
1 Introduction	47
2 TX Compounds	48
2.1 X: Group III: B and Al	48
2.2 X: Group IV: Ge, Si	50

2.3	X: Group V: P, As, Sb and Bi	54
2.4	X: Group VI: S, Se and Te	60
3	T₂X compounds	61
3.1	X: Group III; B	61
3.2	X: Group V: P, As, Sb	62
4	T₃X	65
4.1	Mn ₃ X	65
4.2	Fe ₃ X	69
5	(Fe_{1-x}T_x)₂P	72
5.1	T = Cr; (Fe _{1-x} Cr _x) ₂ P	72
5.2	T = Mn; (Fe _{1-x} Mn _x) ₂ P	73
5.3	T = Co; (Fe _{1-x} Co _x) ₂ P	73
5.4	T = Ni; (Fe _{1-x} Ni _x) ₂ P	74
5.5	(Fe _{1-x} Co _x) ₂ As	74
5.6	(Fe _{1-x} Mn _x) ₂ (P _{1-y} X _y)	74
6	Other systems	75
6.1	MnFe _{0.35} Co _{0.65} P (orthorhombic)	75
6.2	IrMnSi	76
6.3	Mn ₃ TX (T = Co, Ir; X = Si, Ge) ordered β-Mn type structures	76
	References	77
3.	Magnetic properties of ternary rare-earth transition-metal compounds	87
	<i>Hong-Shuo Li and J.M.D. Coey</i>	
1	Introduction	87
2	Compounds with structures related to NaZn₁₃	89
3	Compounds with structures related to ThMn₁₂	91
3.1	Crystal structure	91
3.2	Alloys rich in Fe or Co	93
3.3	Alloys rich in Al	128
4	Compounds with structures related to BaCd₁₁	140
4.1	RT ₉ Si ₂	140
4.2	RT ₁₀ SiC _{0.5}	141
5	Compounds with structures related to Th₂Zn₁₇ or Th₂Ni₁₇	144
5.1	R ₂ T ₁₇ C _{3-δ}	144
5.2	R ₂ T ₁₇ N _{3-δ}	147
6	Compounds with structures related to CaCu₅	150
6.1	RT ₄ B	151
6.2	R ₃ Co ₁₁ B ₄ , R ₂ Co ₇ B ₃ and RCo ₃ B ₂	156
6.3	CeTPt ₄ (T = Cu, Ga, Rh, Pd or Pt)	158
7	Compounds with structures related to CeNi₃	158
8	Compounds with ternary structure types	159
8.1	R ₃ Fe ₆₂ B ₁₄	159
8.2	RCO ₁₂ B ₆	159
8.3	R ₂ T ₂₃ B ₃	161
8.4	R ₂ T ₁₄ C	162
8.5	RT ₆ Sn ₆	170

8.6	$R_{1+\epsilon}T_4B_4$	171
8.7	$R_6T_{11}Ga_3$ and $Nd_6Fe_{13}Si$	173
8.8	$R_2T_{12}P_7$ and RCo_8P_5	175
8.9	$RAuNi_4$ and $Ce_{1+x}In_{1-x}Pt_4$	179
9	Conclusions	179
	References	186
	Further reading	196
	Author Index	197
	Subject Index	211
	Material Index	215
