List of Figures	vii
List of Tables	ix
Preface	xi
I Background and Theory	1
1 Fractional integrals	3
1.1 Riemann-Liouville integral	3
1.2 Fractional integrals of other types	14
2 Fractional derivatives	19
2.1 Riemann-Liouville derivative	19
2.2 Some remarks on the Riemann-Liouville derivative	33
2.3 Caputo derivative	36
2.4 Some remarks on the Caputo derivative	45
2.5 Riesz derivative	46
2.6 The fractional Laplacian	54
2.7 Fractional derivatives of other types	64
2.8 Definite conditions for fractional differential equations	71
II Numerical Approximations	85
3 Numerical fractional integration	87
3.1 Numerical methods based on polynomial interpolation	87
3.2 Fractional linear multistep method	92
3.3 Spectral approximations	95
3.4 Diffusive approximation	101
4 Numerical Caputo differentiation	105
4.1 L1, L2, and L2C methods	105
4.2 High-order methods based on polynomial interpolation	119
4.3 Fractional linear multistep method	170
4.4 Spectral approximations	178
4.5 Diffusive approximation	183

5	Numerical Riemann-Liouville differentiation	185
5.1	L1, L2, and L2C methods	185
5.2	Approximation based on spline interpolation	187
5.3	Grünwald-Letnikov type approximations	194
5.4	Fractional backward difference formulae with modifications	203
5.5	Fractional average central difference method	231
5.6	Spectral approximations	236
5.7	Numerical method based on finite-part integrals	236
6	Numerical Riesz differentiation	239
6.1	Indirect approximations to the fractional diffusion operator	241
6.2	Direct approximations to the fractional diffusion operator	253
6.3	Indirect approximations to the fractional convection operator	268
6.4	Direct approximations to the fractional convection operator	278
7	Numerical fractional Laplacian	283
7.1	Approximations based on regularization and interpolation	287
7.2	Approximation based on the weighted trapezoidal rule	291
7.3	Some remarks on the numerical fractional Laplacian	294
	Bibliography	297
	Index	309
