INTRODUCTION	xi
I THE PERCEPTION OF DISTANCE BY SIGHT	I
1. The plan of Berkeley's <i>Essay</i> , 1	
2. What does it mean to say that distance is not immediately seen? 2	
3. Is it true that distance is not immediately seen? 9	
4. How is distance estimated by sight? 16	
II THE CENTRAL DOCTRINES OF THE 'ESSAY'	23
5. Berkeley's conclusions, 23	
6. The <i>New Theory of Vision</i> and 'Immaterialism of the Eye', 26	
7. The numerical difference of the objects of sight and touch, 32	
III THE REMAINDER OF THE 'ESSAY'	39
8. The estimation by sight of the magnitude of objects, 39	
9. <i>Minima sensibilia</i> , 42	
10. The problem of the inverted retinal image, 45	
11. The specific distinction of visual and tactual objects, 52	
12. The objects of geometry. Resumé of Berkeley's contentions, 58	
IV CRITICISM OF BERKELEY'S CONCLUSIONS	61
13. Experimental evidence: its relevance to this inquiry, 61	
14. Is distance immediately seen? 65	
15. What are the immediate objects of touch? 73	
16. Are visible and tangible extension numerically distinct? 81	
V SOUNDS, TASTES AND SMELLS	91
17. Are sounds, tastes and smells in space? 91	
18. Conclusion, 101
