

PART I

Principles of Molecular Oncology

1. The Cancer Genome 2

Yardena Samuels, Alberto Bardelli, Yochai Wolf, and Carlos López-Otin

- Introduction 2
- Cancer Genes and Their Mutations 2
- Identification of Cancer Genes 2
- Somatic Alteration Classes Detected by Cancer Genome Analysis 11
- Pathway-Oriented Models of Cancer Genome Analysis 13
- Networks of Cancer Genome Projects 15
- The Genomic Landscape of Cancers 18
- Integrative Analysis of Cancer Genomics 19
- Immunogenomics 19
- The Cancer Genome and the New Taxonomy of Tumors 21
- Cancer Genomics and Drug Resistance 25
- Perspectives of Cancer Genome Analysis 25
- Acknowledgments 26

2. Molecular Methods in Cancer 32

Larissa V. Furtado, Jay L. Hess, and Bryan L. Betz

- Applications of Molecular Diagnostics in Oncology 32
- The Clinical Molecular Diagnostics Laboratory: Rules and Regulations 36
- Specimen Requirements for Molecular Diagnostics 36
- Molecular Diagnostics Testing Process 37
- Targeted Mutation Analysis Methods 37
- Whole-Genome Analysis Methods 46
- Immunohistochemistry for Tumor Biomarkers 50
- Cell-Free DNA Technologies 51

3. Hallmarks of Cancer: An Organizing Principle for Cancer Medicine. . . . 55

Douglas Hanahan and Robert A. Weinberg

- Introduction 55
- Hallmark Capabilities, In Essence 55
- Two Ubiquitous Characteristics Facilitate the Acquisition of Hallmark Capabilities 68
- The Constituent Cell Types of the Tumor Microenvironment 70
- Therapeutic Targeting of the Hallmarks of Cancer 78
- Conclusion and a Vision for the Future 80
- Acknowledgment 80

4. Oncogenic Viruses	85
<i>Christopher B. Buck, Lee Ratner, and Giovanna Tosato</i>	
Principles of Tumor Virology	85
Papillomaviruses	87
Polyomaviruses	90
Epstein-Barr Virus	92
Kaposi Sarcoma Herpesvirus	94
Animal and Human Retroviruses	95
Hepatitis Viruses	97
Conclusion	101
5. DNA Repair in Normal and Cancer Cells	106
<i>Meredith A. Morgan and Theodore S. Lawrence</i>	
Introduction	106
Factors That Affect Radiation Response	112
Drugs That Affect Radiation Sensitivity	115
6. Microbiome and Cancer	119
<i>Giorgio Trinchieri</i>	
Introduction	119
Cancer as a Disease of the Metaorganism	119
Bacteria as Cause of Cancer	120
Bacteria as Cancer Drugs	124
Microbiota and Drug Metabolism	124
Microbiota and Chemotherapy	126
Microbiota and Immunotherapy	126
Looking Forward	131
7. Precision Medicine in Oncology	134
<i>James H. Doroshow</i>	
Introduction	134
Approach to Precision Medicine in Oncology	134
Preclinical Models to Inform Precision Oncology	137
Role of Molecular Pharmacodynamics and Diagnostics in Precision Oncology	137
Precision Oncology Clinical Trials and Trial Designs	140
Imaging and Precision Oncology	142
Precision Prevention	144
Future Prospects	145
8. Cancer Immunotherapy	148
<i>Jeffrey Weber and Iulia Giuroiu</i>	
Introduction	148
Interferon- α	148
Interleukin-2	149
Talimogene Laherparepvec	150
Granulocyte Macrophage Colony-Stimulating Factor	151
Tumor-Infiltrating Lymphocytes	152
Checkpoint Inhibitors—Cytotoxic T-Lymphocyte Antigen 4 and Programmed Cell Death Protein 1	153
Cytotoxic T-Lymphocyte Antigen 4 Blockade	153
Programmed Cell Death Protein 1 and Programmed Cell Death Protein Ligand 1 Blockade	155
Vaccines	161
Conclusion	161

9. Immunotherapy Agents	166
<i>Jeffrey A. Sosman and Douglas B. Johnson</i>	
Introduction	166
Human Tumor Antigens	166
Tumor Vaccines	174
Oncolytic Viruses	178
Factors to Activate Immune Effector Cells	179
Signaling Modulation	180
Soluble Factors	181
Adenosine A2 α Receptor Axis	182
Innate Immune Modulation	182
Bifunctional Fusion Proteins	183
10. Monoclonal Antibodies	190
<i>Hossein Borghaei, Matthew K. Robinson, Gregory P. Adams, and Louis M. Weiner</i>	
Introduction	190
Immunoglobulin Structure	190
Modified Antibody-Based Molecules	190
Factors Regulating Antibody-Based Tumor Targeting	192
Unconjugated Antibodies	193
Altering Signal Transduction	194
Immunoconjugates	194
Antibodies Approved for Use in Solid Tumors	195
Antibodies Used in Hematologic Malignancies	197
Conclusion	200
11. Cancer Susceptibility Syndromes	204
<i>Alice Hawley Berger and Pier Paolo Pandolfi</i>	
Introduction	204
Principles of Cancer Susceptibility	204
Genetic Testing	208
Cancer Susceptibility Syndromes	208
Principles of Cancer Chemoprevention	214
Emerging Knowledge and New Lessons	215
Conclusion	216
12. Pharmacogenomics	219
<i>Christine M. Walko and Howard L. McLeod</i>	
Introduction	219
Pharmacogenomics of Tumor Response	220
Pathway-Directed Anticancer Therapy	220
Genetic-Guided Therapy: Practical Issues in Somatic Analysis	223
Pharmacogenomics of Chemotherapy Drug Toxicity	224
Conclusions and Future Directions	226
13. Genetic Counseling	228
<i>Danielle C. Bonadies, Meagan B. Farmer, and Ellen T. Matloff</i>	
Introduction	228
Who is a Candidate for Cancer Genetic Counseling?	229
Components of the Cancer Genetic Counseling Session	230
Issues in Cancer Genetic Counseling	237
Future Directions	242
Conclusion	243

P A R T I I

Molecular Biology of Individual Cancers

14. The Molecular Biology of Head and Neck Cancers.248

Thomas E. Carey, Mark E. Prince, and J. Chad Brenner

- Incidence, Risk Factors, and Etiology 248
- Oral Tongue Cancer in Young Patients 248
- High-Risk HPV in Oropharyngeal Cancer 248
- Molecular Mechanisms in HNSCC 250
- The Cancer Genome Atlas Project 251
- Inhibition of HNSCC Immune Escape 252
- Cancer Stem Cells 252

15. The Molecular Biology of Lung Cancer257

Jill E. Larsen and John D. Minna

- Introduction 257
- Genomics: Tools for Identification, Prediction, and Prognosis 257
- Functional Genomics in Lung Cancer 260
- Genetic and Epigenetic Alterations in Lung Cancer 261
- Metastasis and the Tumor Microenvironment 267
- Lung Cancers Stem Cells 268
- Telomerase-mediated Cellular Immortality in Lung Cancer 268
- Clinical Translation of Molecular Data 269

16. Molecular Biology of the Esophagus and Stomach.273

Anil K. Rustgi

- Introduction 273
- Molecular Biology of Esophageal Cancer 273
- Molecular Biology of Gastric Cancer 276

17. The Molecular Biology of Pancreas Cancer280

Scott E. Kern and Ralph H. Hruban

- Introduction 280
- Common Genetic Changes in Pancreatic Ductal Adenocarcinoma 280
- Less-Prevalent Genetic Changes in Pancreatic Ductal Adenocarcinoma 285
- Other Neoplastic Lesions 286

18. Molecular Biology of Liver Cancer290

Jens U. Marquardt and Snorri S. Thorgeirsson

- Introduction 290
- Genetic Alterations in Liver Cancer 290
- Epigenetic Alterations in Liver Cancer 291
- Mutational Landscape of Genetic Alterations—The Next Generation 292
- The Microenvironment of Liver Cancer 295
- Classification and Prognostic Prediction of Hepatocellular Carcinoma 296
- Molecular Basis of Cholangiocarcinoma 297
- Conclusion and Perspective 297

19. Molecular Biology of Colorectal Cancer300*Ramesh A. Shivdasani*

- Introduction 300
- Multistep Models of Colorectal Cancer and Genetic Instability 300
- Mutational and Epigenetic Landscapes in Colorectal Cancer 301
- Insights from Mouse Intestinal Crypts and Human Colorectal Cancers Lead to a Coherent Model for Colorectal Cancer Initiation and Progression 303
- Inherited Syndromes of Increased Cancer Risk Highlight Early Events and Critical Pathways in Colorectal Tumorigenesis 304
- Oncogene and Tumor Suppressor Gene Mutations in Colorectal Cancer Progression 308

20. Molecular Biology of Kidney Cancer.314*W. Marston Linehan and Laura S. Schmidt*

- Introduction 314
- Clear Cell Renal Cell Carcinoma 314
- Papillary Renal Cell Carcinoma 316
- Chromophobe Renal Cell Carcinoma 318
- Additional Types of Renal Cell Carcinoma 319
- Conclusion 320

21. Molecular Biology of Bladder Cancer322*Carolyn D. Hurst and Margaret A. Knowles*

- Introduction 322
- Mutational Landscape 322
- Heterogeneity and Clonal Evolution 327
- Molecular Subtypes 327
- Therapeutic Opportunities and Future Outlook 329

22. The Molecular Biology of Prostate Cancer334*Charles Dai and Nima Sharifi*

- Introduction 334
- The Genomic Landscape of Prostate Cancer 334
- The Molecular Subtypes of Primary Prostate Cancer 335
- The Clonal Evolution of Lethal Metastatic Prostate Cancer 337
- Genetic Basis of Prostate Cancer Heritability 337
- Androgen Signaling in Prostate Cancer 338
- Other Signaling Pathways in Prostate Cancer 342
- Areas of Ongoing Research and Emerging Therapeutic Approaches 343
- Conclusion 343

23. Molecular Biology of Gynecologic Cancers348*Tanja Pejovic, Adam J. Krieg, and Kunle Odunsi*

- Introduction 348
- Ovarian Cancer 348
- Endometrial Cancer 353
- Cervix, Vaginal, and Vulvar Cancers 355

24. Molecular Biology of Breast Cancer360*Ana T. Nunes, Tara Berman, and Lyndsay Harris*

- Introduction 360
- Genetics of Breast Cancer 360
- Somatic Alterations in Breast Cancer 363
- Protein/Pathway Alterations 369

25. Molecular Biology of Endocrine Tumors	375
<i>Zeyad T. Sahli, Brittany A. Avin, and Martha A. Zeiger</i>	
Endocrine Syndromes	375
Adrenal Gland	378
Parathyroid Gland	380
Pituitary Gland	381
Thyroid Gland	382
Acknowledgments	385
26. Molecular Biology of Sarcomas	388
<i>Samuel Singer and Cristina R. Antonescu</i>	
Introduction	388
Soft Tissue Sarcomas	388
Bone and Cartilaginous Tumors	399
Future Directions: Next-Generation Sequencing and Functional Screens	401
27. Molecular Biology of Cutaneous Melanoma	410
<i>Michael A. Davies</i>	
Introduction	410
The Cancer Genome Atlas Effort in Cutaneous Melanoma	410
The RAS-RAF-MAPK Pathway	410
Additional Oncogenic Pathways	414
Melanin Synthesis Pathway	417
Summary and Future Directions	418
28. Molecular Biology of Central Nervous System Tumors	422
<i>Mark W. Youngblood, Jennifer Moliterno Günel, and Murat Günel</i>	
Introduction	422
Pediatric Brain Tumors	422
Adult Brain Tumors	426
Summary	428
Acknowledgments	428
29. Molecular Biology of Lymphoma	431
<i>Nicolò Compagno, Laura Pasqualucci, and Riccardo Dalla-Favera</i>	
Introduction	431
The Cell of Origin of Lymphoma	431
General Mechanisms of Genetic Alterations in Lymphoma	433
Molecular Pathogenesis of B-Cell Non-Hodgkin Lymphoma	436
Molecular Pathogenesis of T-Cell Non-Hodgkin Lymphoma	444
Molecular Pathogenesis of Hodgkin Lymphoma	446
30. Molecular Biology of Acute Leukemias	453
<i>Glen D. Raffel and Jan Cerny</i>	
Introduction	453
Leukemic Stem Cell	453
Elucidation of Genetic Events in Acute Leukemia	453
Mutations Affecting Transcription Factors	458
Mutations of Epigenetic Modifiers	462
Mutations Affecting Signaling	464
Mutations in Tumor Suppressor Genes	465
Activating Mutations of NOTCH	466
Mutations Altering Localization of NPM1	467
Mutations in Cohesin Complex Genes	467
Mutations in Splicing Machinery	467
Mutational Complementation Groups in Acute Leukemias	467
Conclusion	468

31. Molecular Biology of Chronic Leukemias472

Christopher A. Eide, James S. Blachly, and Anupriya Agarwal

- Introduction 472
- Chronic Myeloid Leukemia 472
- Chronic Lymphocytic Leukemia 476
- Acknowledgments 479

***Index*485**
