Preface	v
Introduction	1
1 Dimensional Analysis, Modelling, and Invariance	4
1.1 Introduction	4
1.2 Dimensional Analysis—Buckingham Pi-Theorem	4
1.2.1 Assumptions Behind Dimensional Analysis	5
1.2.2 Conclusions from Dimensional Analysis	6
1.2.3 Proof of the Buckingham Pi-Theorem	7
1.2.4 Examples	9
1.3 Application of Dimensional Analysis to Partial Differential Equations	14
1.3.1 Examples	15
1.4 Generalization of Dimensional Analysis—Invariance of Partial Differential Equations Under Scalings of Variables	22
1.5 Discussion	29
2 Lie Groups of Transformations and Infinitesimal Transformations	31
2.1 Lie Groups of Transformations	31
2.1.1 Groups	31
2.1.2 Examples of Groups	32
2.1.3 Groups of Transformations	33
2.1.4 One-Parameter Lie Group of Transformations	34
2.1.5 Examples of One-Parameter Lie Groups of Transformations	35
2.2 Infinitesimal Transformations	36
2.2.1 First Fundamental Theorem of Lie	37
2.2.2 Examples Illustrating Lie's First Fundamental Theorem	39

2.2.3	Infinitesimal Generators	40
2.2.4	Invariant Functions	43
2.2.5	Canonical Coordinates	44
2.2.6	Examples of Sets of Canonical Coordinates	47
2.2.7	Invariant Surfaces, Invariant Curves, Invariant Points	48
2.3	Extended Transformations (Prolongations)	53
2.3.1	Extended Group Transformations—One Dependent and One Independent Variable	55
2.3.2	Extended Infinitesimal Transformations—One Dependent and One Independent Variable	61
2.3.3	Extended Transformations—One Dependent and n Independent Variables	63
2.3.4	Extended Infinitesimal Transformations—One Dependent and n Independent Variables	66
2.3.5	Extended Transformations and Extended Infinitesimal Transformations— m Dependent and n Independent Variables	70
2.4	Multi-Parameter Lie Groups of Transformations; Lie Algebras	75
2.4.1	r -Parameter Lie Groups of Transformations	75
2.4.2	Lie Algebras	80
2.4.3	Examples of Lie Algebras	82
2.4.4	Solvable Lie Algebras	85
2.5	Discussion	88
3	Ordinary Differential Equations	90
3.1	Introduction—Invariance of an Ordinary Differential Equation	90
3.1.1	Invariance of an ODE	90
3.1.2	Elementary Examples	92
3.1.3	Mapping of Solutions to Other Solutions from Group Invariance of an ODE	94
3.2	First Order ODE's	97
3.2.1	Canonical Coordinates	98
3.2.2	Integrating Factors	100
3.2.3	Determining Equation for Infinitesimal Transformations of a First Order ODE	102
3.2.4	Determination of First Order ODE's Invariant Under a Given Group	104
3.3	Second and Higher Order ODE's	109
3.3.1	Reduction of Order by Canonical Coordinates	110

3.3.2	Reduction of Order by Differential Invariants	112
3.3.3	Examples of Reduction of Order	115
3.3.4	Determining Equations for Infinitesimal Transformations of an n th Order ODE	120
3.3.5	Determination of n th Order ODE's Invariant Under a Given Group	124
3.4	Invariance of ODE's Under Multi-Parameter Groups	128
3.4.1	Invariance of a Second Order ODE Under a Two-Parameter Group	129
3.4.2	Invariance of an n th Order ODE Under a Two-Parameter Group	132
3.4.3	Invariance of an n th Order ODE Under an r -Parameter Lie Group with a Solvable Lie Algebra	135
3.5	Applications to Boundary Value Problems	147
3.6	Invariant Solutions	149
3.6.1	Invariant Solutions for First Order ODE's—Separatrices and Envelopes	154
3.7	Discussion	160
4	Partial Differential Equations	163
4.1	Introduction—Invariance of a Partial Differential Equation	163
4.1.1	Invariance of a PDE	163
4.1.2	Elementary Examples	165
4.2	Invariance for Scalar PDE's	169
4.2.1	Invariant Solutions	169
4.2.2	Mapping of Solutions to Other Solutions from Group Invariance of a PDE	171
4.2.3	Determining Equations for Infinitesimal Transformations of a k th Order PDE	172
4.2.4	Examples	176
4.3	Invariance for Systems of PDE's	195
4.3.1	Invariance of a System of PDE's	196
4.3.2	Invariant Solutions	196
4.3.3	Determining Equations for Infinitesimal Transformations of a System of PDE's	199
4.3.4	Examples	201
4.4	Applications to Boundary Value Problems	215
4.4.1	Formulation of Invariance of a BVP for a Scalar PDE	216
4.4.2	Incomplete Invariance for a Linear Scalar PDE	232

	4.4.3	Incomplete Invariance for a Linear System of PDE's	241
4.5		Discussion	249
5		Noether's Theorem and Lie-Bäcklund Symmetries	252
5.1		Introduction	252
5.2		Noether's Theorem	253
	5.2.1	Euler-Lagrange Equations	254
	5.2.2	Variational Symmetries and Conservation Laws; Boyer's Formulation	257
	5.2.3	Equivalent Classes of Lie-Bäcklund Transformations; Lie-Bäcklund Symmetries	260
	5.2.4	Contact Transformations; Contact Symmetries	267
	5.2.5	Finding Variational Symmetries	272
	5.2.6	Noether's Formulation	274
	5.2.7	Examples of Higher Order Conservation Laws	279
5.3		Recursion Operators for Lie-Bäcklund Symmetries	283
	5.3.1	Recursion Operators for Linear Differential Equations	283
	5.3.2	Recursion Operators for Nonlinear Differential Equations	286
	5.3.3	Integro-Differential Recursion Operators	290
	5.3.4	Lie-Bäcklund Classification Problem	294
5.4		Discussion	300
6		Construction of Mappings Relating Differential Equations	302
6.1		Introduction	302
6.2		Notations; Mappings of Infinitesimal Generators	303
	6.2.1	Theorems on Invertible Mappings	307
6.3		Mapping of a Given DE to a Specific Target DE	308
	6.3.1	Construction of Non-Invertible Mappings	308
	6.3.2	Construction of Invertible Point Mappings	313
6.4		Invertible Mappings of Nonlinear PDE's to Linear PDE's	319
	6.4.1	Invertible Mappings of Nonlinear Systems of PDE's to Linear Systems of PDE's	320
	6.4.2	Invertible Mappings of Nonlinear Scalar PDE's to Linear Scalar PDE's	325

Contents		xiii
6.5	Invertible Mappings of Linear PDE's to Linear PDE's with Constant Coefficients	336
6.5.1	Examples of Mapping Variable Coefficient PDE's to Constant Coefficient PDE's	341
6.5.2	Mapping Constant Coefficient PDE's to Constant Coefficient PDE's	347
6.6	Discussion	350
7	Potential Symmetries	352
7.1	Introduction	352
7.2	Potential Symmetries for Partial Differential Equations	353
7.2.1	Examples of Potential Symmetries	356
7.2.2	Comparison of Point Symmetries of $R\{x, u\}$ and $S\{x, u, v\}$	362
7.2.3	Types of Potential Symmetries of Linear PDE's	366
7.2.4	Applications to Boundary Value Problems	368
7.2.5	Non-Invertible Mappings of Nonlinear PDE's to Linear PDE's	369
7.2.6	Conserved Forms	372
7.2.7	Inherited Symmetries	374
7.3	Potential Symmetries for Ordinary Differential Equations	379
7.3.1	An Example	380
7.4	Discussion	382
