<b>Foreword</b>	<b>ix</b>
<b>Lecture 1: Introduction</b>	<b>1</b>
1.1 Motivation: Drinfeld, L. Lafforgue, and V. Lafforgue	1
1.2 The possibility of shtukas in mixed characteristic	4
<b>Lecture 2: Adic spaces</b>	<b>7</b>
2.1 Motivation: Formal schemes and their generic fibers	7
2.2 Huber rings	9
2.3 Continuous valuations	13
<b>Lecture 3: Adic spaces II</b>	<b>17</b>
3.1 Rational Subsets	17
3.2 Adic spaces	20
3.3 The role of $A^+$	20
3.4 Pre-adic spaces	21
Appendix: Pre-adic spaces	23
<b>Lecture 4: Examples of adic spaces</b>	<b>27</b>
4.1 Basic examples	27
4.2 Example: The adic open unit disc over $\mathbf{Z}_p$	29
4.3 Analytic points	32
<b>Lecture 5: Complements on adic spaces</b>	<b>35</b>
5.1 Adic morphisms	35
5.2 Analytic adic spaces	36
5.3 Cartier divisors	38
<b>Lecture 6: Perfectoid rings</b>	<b>41</b>
6.1 Perfectoid Rings	41
6.2 Tilting	43
6.3 Sousperfectoid rings	47
<b>Lecture 7: Perfectoid spaces</b>	<b>49</b>
7.1 Perfectoid spaces: Definition and tilting equivalence	49
7.2 Why do we study perfectoid spaces?	50

7.3	The equivalence of étale sites	50
7.4	Almost mathematics, after Faltings	52
7.5	The étale site	55
<b>Lecture 8: Diamonds</b>		<b>56</b>
8.1	Diamonds: Motivation	56
8.2	Pro-étale morphisms	57
8.3	Definition of diamonds	60
8.4	The example of $\mathrm{Spd} \mathbf{Q}_p$	62
<b>Lecture 9: Diamonds II</b>		<b>64</b>
9.1	Complements on the pro-étale topology	64
9.2	Quasi-pro-étale morphisms	67
9.3	$G$ -torsors	68
9.4	The diamond $\mathrm{Spd} \mathbf{Q}_p$	69
<b>Lecture 10: Diamonds associated with adic spaces</b>		<b>74</b>
10.1	The functor $X \mapsto X^\diamond$	74
10.2	Example: Rigid spaces	77
10.3	The underlying topological space of diamonds	79
10.4	The étale site of diamonds	80
Appendix: Cohomology of local systems		82
<b>Lecture 11: Mixed-characteristic shtukas</b>		<b>90</b>
11.1	The equal characteristic story: Drinfeld's shtukas and local shtukas	90
11.2	The adic space " $S \times \mathrm{Spa} \mathbf{Z}_p$ "	91
11.3	Sections of $(S \times \mathrm{Spa} \mathbf{Z}_p)^\diamond \rightarrow S$	94
11.4	Definition of mixed-characteristic shtukas	95
<b>Lecture 12: Shtukas with one leg</b>		<b>98</b>
12.1	$p$ -divisible groups over $\mathcal{O}_C$	98
12.2	Shtukas with one leg and $p$ -divisible groups: An overview	100
12.3	Shtukas with no legs, and $\varphi$ -modules over the integral Robba ring	103
12.4	Shtukas with one leg, and $B_{\mathrm{dR}}$ -modules	105
<b>Lecture 13: Shtukas with one leg II</b>		<b>108</b>
13.1	$\mathcal{Y}$ is an adic space	108
13.2	The extension of shtukas over $x_L$	109
13.3	Full faithfulness	109
13.4	Essential surjectivity	111
13.5	The Fargues-Fontaine curve	112
<b>Lecture 14: Shtukas with one leg III</b>		<b>115</b>
14.1	Fargues' theorem	115
14.2	Extending vector bundles over the closed point of $\mathrm{Spec} A_{\mathrm{inf}}$	116
14.3	Proof of Theorem 14.2.1	119

14.4 Description of the functor “?”	121
Appendix: Integral $p$ -adic Hodge theory	123
14.6 Cohomology of rigid-analytic spaces	124
14.7 Cohomology of formal schemes	124
14.8 $p$ -divisible groups	126
14.9 The results of [BMS18]	127
<b>Lecture 15: Examples of diamonds</b>	<b>131</b>
15.1 The self-product $\mathrm{Spd} \mathbf{Q}_p \times \mathrm{Spd} \mathbf{Q}_p$	131
15.2 Banach-Colmez spaces	133
<b>Lecture 16: Drinfeld’s lemma for diamonds</b>	<b>140</b>
16.1 The failure of $\pi_1(X \times Y) = \pi_1(X) \times \pi_1(Y)$	140
16.2 Drinfeld’s lemma for schemes	141
16.3 Drinfeld’s lemma for diamonds	143
<b>Lecture 17: The <math>v</math>-topology</b>	<b>149</b>
17.1 The $v$ -topology on $\mathrm{Perfd}$	149
17.2 Small $v$ -sheaves	152
17.3 Spatial $v$ -sheaves	152
17.4 Morphisms of $v$ -sheaves	155
Appendix: Dieudonné theory over perfectoid rings	158
<b>Lecture 18: <math>v</math>-sheaves associated with perfect and formal schemes</b>	<b>161</b>
18.1 Definition	161
18.2 Topological spaces	162
18.3 Perfect schemes	163
18.4 Formal schemes	167
<b>Lecture 19: The <math>B_{\mathrm{dR}}^+</math>-affine Grassmannian</b>	<b>169</b>
19.1 Definition of the $B_{\mathrm{dR}}^+$ -affine Grassmannian	169
19.2 Schubert varieties	172
19.3 The Demazure resolution	173
19.4 Minuscule Schubert varieties	176
Appendix: $\mathcal{G}$ -torsors	178
<b>Lecture 20: Families of affine Grassmannians</b>	<b>182</b>
20.1 The convolution affine Grassmannian	183
20.2 Over $\mathrm{Spd} \mathbf{Q}_p$	184
20.3 Over $\mathrm{Spd} \mathbf{Z}_p$	185
20.4 Over $\mathrm{Spd} \mathbf{Q}_p \times \dots \times \mathrm{Spd} \mathbf{Q}_p$	186
20.5 Over $\mathrm{Spd} \mathbf{Z}_p \times \dots \times \mathrm{Spd} \mathbf{Z}_p$	189
<b>Lecture 21: Affine flag varieties</b>	<b>191</b>
21.1 Over $\mathbf{F}_p$	191
21.2 Over $\mathbf{Z}_p$	192

21.3	Affine flag varieties for tori	194
21.4	Local models	194
21.5	Dévissage	196
	Appendix: Examples	198
21.7	An EL case	203
21.8	A PEL case	204
<b>Lecture 22:</b>	<b>Vector bundles and <math>G</math>-torsors</b>	<b>207</b>
22.1	Vector bundles	207
22.2	Semicontinuity of the Newton polygon	208
22.3	The étale locus	209
22.4	Classification of $G$ -torsors	210
22.5	Semicontinuity of the Newton point	212
22.6	Extending $G$ -torsors	213
<b>Lecture 23:</b>	<b>Moduli spaces of shtukas</b>	<b>215</b>
23.1	Definition of mixed-characteristic local shtukas	216
23.2	The case of no legs	217
23.3	The case of one leg	218
23.4	The case of two legs	220
23.5	The general case	223
<b>Lecture 24:</b>	<b>Local Shimura varieties</b>	<b>225</b>
24.1	Definition of local Shimura varieties	225
24.2	Relation to Rapoport-Zink spaces	226
24.3	General EL and PEL data	229
<b>Lecture 25:</b>	<b>Integral models of local Shimura varieties</b>	<b>232</b>
25.1	Definition of the integral models	232
25.2	The case of tori	235
25.3	Non-parahoric groups	236
25.4	The EL case	237
25.5	The PEL case	238
<b>Bibliography</b>		<b>241</b>
<b>Index</b>		<b>249</b>
