

Contents

<i>Preface</i>	vii
1. Introduction	1
1.1 Artificial Intelligence	1
1.1.1 Machine Learning	2
1.2 Motivation and Goals	4
1.3 Guide to the Reader	6
1.4 Content	7
1.4.1 Classical computation	7
1.4.2 Quantum computation	8
1.4.3 Quantum machine learning	10
1.4.4 Quantum-like models	12
1.4.5 Quantum philosophy	13
2. Computation	15
2.1 Entscheidungsproblem	15
2.1.1 Cantor's diagonal argument	17
2.1.2 Reductio ad absurdum	18
2.2 Complexity Theory	19
2.2.1 Decision problems	19
2.2.2 P and NP	19
2.3 Church-Turing Thesis	21
2.3.1 Church-Turing-Deutsch principle	21
2.4 Computers	21
2.4.1 Analog computers	22
2.4.2 Digital computers	23

2.4.3	Von Neumann architecture	24
3.	Problem Solving	27
3.1	Knowledge Representation	27
3.1.1	Rules	28
3.1.2	Logic-based operators	28
3.1.3	Frames	31
3.1.4	Categorical representation	31
3.1.5	Binary vector representation	32
3.2	Production System	33
3.2.1	Deduction systems	34
3.2.2	Reaction systems	36
3.2.3	Conflict resolution	36
3.2.4	Human problem-solving	37
3.2.5	Example	37
3.3	Sub-Symbolic Models of Problem-Solving	38
3.3.1	Proto logic	39
3.3.2	Binding problem	40
3.3.3	Icons	40
3.3.4	Euclidian geometry of the world	42
4.	Information	45
4.1	Information and Thermodynamics	45
4.1.1	Dice model	47
4.1.2	Entropy	48
4.1.3	Maxwell paradox and information	49
4.1.4	Information theory	50
4.2	Hierarchical Structures	55
4.2.1	Example of a taxonomy	57
4.3	Information and Measurement	58
4.3.1	Information measure I	60
4.3.2	Nature of information measure	63
4.3.3	Measurement of angle	63
4.3.4	Information and contour	64
4.4	Information and Memory	65
4.5	Sparse code for Sub-symbols	74
4.5.1	Sparsification based on unary sub-vectors	75
4.6	Deduction Systems and Associative Memory	77

4.6.1	Taxonomic knowledge organization	80
5.	Reversible Algorithms	83
5.1	Reversible Computation	83
5.2	Reversible Circuits	84
5.2.1	Boolean gates	84
5.2.2	Reversible Boolean gates	84
5.2.3	Toffoli gate	85
5.2.4	Circuit	86
6.	Probability	87
6.1	Kolmogorovs Probabilities	87
6.1.1	Conditional probability	88
6.1.2	Law of total probability	89
6.1.3	Bayes' rule	90
6.1.4	Expectation	92
6.1.5	Joint distribution	93
6.1.6	Naïve Bayes and counting	94
6.1.7	Counting and categorization	95
6.2	Bayesian Network	97
6.2.1	Example	101
6.3	Mixed Distribution	102
6.4	Markov Chains	103
6.5	Vector-Based Framework for Probabilities	105
6.5.1	Vector based representation framework	108
6.5.2	Conditional independence	109
6.5.3	Dependency	111
6.5.4	Partial dependency*	111
6.5.5	Bayes' rule*	112
6.5.6	Bayesian networks*	115
6.5.7	Embodiment of representational framework	118
6.5.8	From vector based framework to quantum physics	119
7.	Introduction to Quantum Physics	121
7.1	Unitary Evolution	121
7.1.1	Schrödinger's cat paradox	122
7.1.2	Interpretations of quantum mechanics	122
7.2	Quantum Mechanics	123

7.2.1	Stochastic Markov evolution and unitary evolution	124
7.3	Hilbert Space	125
7.3.1	Spectral representation*	127
7.4	Quantum Time Evolution	131
7.5	Compound Systems	132
7.6	Density Matrix	135
7.7	Mixed states	135
7.8	Shannon entropy	136
7.9	Measurement	137
7.9.1	Measuring a compound system	138
7.9.2	Observables	139
7.9.3	Expectation values	141
7.9.4	Uncertainty	142
7.9.5	General Heisenberg's uncertainty principle*	143
7.9.6	Heisenberg's uncertainty principle*	146
7.9.7	Quantum tunneling	147
7.10	Observables in Quantum Computing	148
7.11	Randomness	149
7.11.1	Deterministic chaos	149
7.11.2	Kolmogorov complexity	151
7.11.3	Humans and random numbers	151
7.11.4	Randomness in quantum physics	152
8.	Computation with Qubits	153
8.1	Computation with one Qubit	153
8.2	Computation with m Qubit	155
8.3	Matrix Representation of Serial and Parallel Operations	157
8.4	Entanglement	159
8.5	Quantum Boolean Circuits	161
8.6	Deutsch Algorithm	164
8.7	Deutsch Jozsa Algorithm	166
8.8	Amplitude Distribution	169
8.8.1	Cloning	170
8.8.2	Teleportation	171
8.9	Geometric Operations	173
9.	Periodicity	179
9.1	Fourier Transform	179

9.2	Discrete Fourier Transform	181
9.2.1	Example	183
9.3	Quantum Fourier Transform	184
9.4	FFT	187
9.5	QFT Decomposition	188
9.5.1	QFT quantum circuit*	189
9.6	QFT Properties	193
9.7	The QFT Period Algorithm	195
9.8	Factorization	198
9.8.1	Example	199
9.9	Kitaev's Phase Estimation Algorithm*	201
9.9.1	Order finding*	204
9.10	Unitary Transforms	205
10.	Search	209
10.1	Search and Quantum Oracle	209
10.2	Lower Bound $\Omega(\sqrt{n})$ for U_f -based Search*	211
10.2.1	Lower bound of a_t	212
10.2.2	Upper bound of a_t	214
10.2.3	$\Omega(\sqrt{n})$	215
10.3	Grover's Amplification	216
10.3.1	Householder reflection	216
10.3.2	Householder reflection and the mean value	218
10.3.3	Amplification	219
10.3.4	Iterative amplification	222
10.3.5	Number of iterations	229
10.3.6	Quantum counting	230
10.4	Circuit Representation	231
10.5	Speeding up the Traveling Salesman Problem	232
10.6	The Generate-and-Test Method	234
10.7	Quantum Walk	234
10.7.1	Random walk	235
10.7.2	Quantum insect	236
10.7.3	Quantum walk on a graph	236
10.7.4	Quantum walk on one dimensional lattice	237
10.7.5	Quantum walk and search	239
10.7.6	Quantum walk for formula evaluation	239
11.	Quantum Problem-Solving	241

11.1	Symbols and Quantum Reality	241
11.2	Uninformed Tree Search	242
11.3	Heuristic Search	245
11.3.1	Heuristic functions	247
11.3.2	Invention of heuristic functions	248
11.3.3	Quality of heuristic	250
11.4	Quantum Tree Search	251
11.4.1	Principles of quantum tree search	251
11.4.2	Iterative quantum tree search	253
11.4.3	No constant branching factor	254
11.5	Quantum Production System	255
11.6	Tarrataca's Quantum Production System	255
11.6.1	3-puzzle	256
11.6.2	Extending for any n -puzzle	260
11.6.3	Pure production system	260
11.6.4	Unitary control strategy	261
11.7	A General Model of a Quantum Computer	262
11.7.1	Cognitive architecture	263
11.7.2	Representation	264
12.	Grover's Algorithm and the Input Problem	265
12.1	Classical Input	265
12.2	Quantum Binding in Context of Associative Memory	266
12.2.1	Proto logic and associative memory	267
12.2.2	Familiarity discrimination	269
12.2.3	Visual scene coding	270
12.2.4	Associations	272
12.2.5	Retrieval	273
12.2.6	Quantum hybrid algorithm for sub-symbolic binding	273
12.2.7	Quantum oracle for familiarity discrimination	276
12.2.8	Grover's iteration	278
12.2.9	Cost Analysis	279
12.2.10	Comparison	280
13.	Statistical Machine Learning	281
13.1	The Karhunen-Loève Transform	281
13.1.1	Principal component analysis	283

13.2	Linear Regression	283
13.2.1	Design matrix	284
13.2.2	Squared-error	285
13.2.3	Closed-form solution	285
13.3	Linear Regression and Linear Artificial Neuron	287
13.3.1	Cross entropy loss function	290
13.4	Multiclass Linear Discriminant	292
13.4.1	Cross entropy loss function for Softmax	293
13.4.2	Limitations	295
13.5	Networks with Hidden Nonlinear Layers	296
13.5.1	Cross entropy error function	296
13.5.2	Backpropagation	297
13.5.3	Computing power	300
13.6	Deep Learning and Backpropagation	300
13.6.1	Overfitting	301
13.6.2	Regularization	302
13.6.3	Second and first order optimization	303
13.7	Support Vector Machines	304
13.7.1	Optimal hyperplane for linear separable patterns	306
13.7.2	Quadratic optimization for finding the optimal hyperplane	307
13.7.3	Dual problem	309
13.8	Optimal Hyperplane for Non-separable Patterns	311
13.8.1	Dual problem	312
13.9	Support Vector Machine as a Kernel Machine	312
13.9.1	Kernel trick	314
13.9.2	Dual problem	315
13.9.3	Classification	315
13.10	Kernel Function	319
13.10.1	Gaussian kernel	319
13.10.2	Sigmoidal kernel	320
14.	Linear-Algebra Based Quantum Machine Learning	321
14.1	Quantum Algorithm for Linear Systems of Equations	321
14.1.1	Motivation	321
14.1.2	Constraints for matrix multiplication and inversion	322
14.1.3	<i>HHL</i> algorithm in machine learning	323
14.1.4	Hamiltonian simulation	324
14.1.5	Eigenvalue estimation	327

14.1.6	Rotation conditioned on the eigenvalue	330
14.1.7	Rotation for matrix multiplication	332
14.1.8	Obtaining the solution	332
14.2	Quantum Principal Component Analysis	333
14.2.1	Measuring density matrix	335
14.3	Quantum Random Access Memory	335
14.3.1	Amplitude coding	335
14.4	Quantum Kernels	337
14.4.1	Swap test	337
14.4.2	Quantum advantage kernels	339
14.5	Problems	339
15.	Stochastic Methods	341
15.1	Hopfield Model	341
15.1.1	Storage capacity	342
15.1.2	Energy function	343
15.2	Ising Model	343
15.2.1	Spin glass	344
15.2.2	Finite temperature dynamics	344
15.2.3	Boltzmann-Gibbs distribution	345
15.2.4	Free energy*	346
15.2.5	Stochastic dynamics	348
15.2.6	Gibbs sampling	349
15.2.7	Metropolis algorithm	351
15.3	Simulated Annealing	352
15.3.1	Combinatorial optimization	353
15.4	Boltzmann Machine	354
15.4.1	Stochastic dynamics of the Boltzmann machine	355
15.4.2	Learning	356
15.4.3	Proof of learning in Boltzmann machine*	358
15.5	Harmonium - Restricted Boltzmann Machine	360
15.5.1	Contrast divergence	361
15.6	Deep Learning with Deep Belief Nets	361
16.	Adiabatic Quantum Computation and Quantum Annealing	365
16.1	Adiabatic Computation	365
16.1.1	Adiabatic optimization	367
16.1.2	Adiabatic theorem	370

16.2	Quantum Annealing	372
16.2.1	Problem Hamiltonian for Ising model	373
16.2.2	D-Wave	375
16.3	Variational Algorithms	381
16.3.1	Variational quantum eigensolvers	381
16.3.2	Quantum approximate optimization algorithms	382
17.	Quantum Cognition	385
17.1	Ordering Effects	385
17.2	Quantum Probability	387
17.2.1	Two-slit interference	387
17.3	Decision Making	389
17.3.1	Unpacking effects	394
17.4	Intensity Waves	395
17.5	Probability Waves	396
17.5.1	Normalized probability waves	396
17.5.2	Law of balance	396
17.6	Balanced Probability Waves	399
17.6.1	Prisoner's dilemma game and probability waves	400
17.6.2	Two stage gambling game	402
17.6.3	Comparison	404
17.6.4	Quantum-like human decision making	406
17.7	Quantum-like Bayesian Network*	407
17.7.1	Probability waves sum to one according by the law of balance	408
17.7.2	Probability waves are smaller equal one only after normalization	409
17.7.3	Example of estimation of balanced phases	409
17.7.4	Example of Bayesian network	411
18.	Quantum like-Evolution	415
18.1	Evolutionary Dynamics	415
18.2	Phase-Balanced Matrix	416
18.2.1	Hadamard product	416
18.2.2	Quantum law of total probability	416
18.3	Quantum Like Evolution	419
18.3.1	Constant phase evolution	420
18.3.2	Dynamic quantum-like evolution	421

18.4	Quasi Unitary Evolution*	426
18.4.1	Strange oscillations*	430
19.	Quantum Computation and the Multiverse	433
19.1	Many-worlds	433
19.2	Deutsch's Decision-theoretic Argument	434
19.2.1	Decision-theoretic argument	435
19.3	Expected Utility and Entropy	439
19.3.1	Weighted sum of surprisals	440
19.3.2	Recovering probabilities from entropy	442
19.3.3	Biological principle of energy minimization	443
19.4	Free Will	445
19.4.1	Computer metaphor	445
19.4.2	Explanation as a function of the brain	446
19.5	Quantum Reality	446
19.5.1	Multiverse metaphor: Library of Babel metaphor	447
19.5.2	Conclusion	449
20.	Conclusion	451
20.1	Quantum Brain	451
20.2	Epilogue	453
	<i>Bibliography</i>	455
	<i>Index</i>	473
