Part I Basic Notions

1	Basic Definitions and Notions	3
1.1	Slow–Fast Families of Vector Fields	3
1.2	Examples	5
1.3	Examples Where More Than One Admissible Expression Is Needed	9
1.4	Normally Hyperbolic Versus Contact Points.....	10
2	Local Invariants and Normal Forms	15
2.1	Normal Forms Near Contact Points	15
2.2	Invariants at Contact Points	17
2.3	Example.....	20
2.4	Remarks About Contact Points	22
2.5	Invariants at Normally Hyperbolic Points	25
3	The Slow Vector Field	27
3.1	Definition	27
3.2	Differential 1-Forms Along the Critical Curve	31
3.3	Calculating Slow Vector Fields	32
3.4	The Slow Vector Field Near Contact Points	34
3.5	Slow Singularities	37
4	Slow–Fast Cycles	39
4.1	Definitions	39
4.2	Elementary Slow–Fast Segments	41
4.3	Regular Common Cycles	44
4.4	Canard Cycles	46
4.5	Ordinary Canard Cycles	48
4.6	Transitory Cycles.....	50
4.6.1	Singular Points in the Slow Vector Field: Transition to Singular Homoclinic.....	50

4.6.2	Loss of Hyperbolicity on One of the Two Branches in a Layer	51
4.6.3	Birth of Canard Cycles	52
5	The Slow Divergence Integral	53
5.1	Preliminaries.....	53
5.2	Definition and Intrinsic Nature of Slow Divergence Integral	55
5.3	Invariance of the Slow Divergence Integral Under Equivalences	56
5.4	Slow Divergence Integral Near Singularities of the Slow Vector Field	57
5.5	Slow Divergence Integral Near Contact Points	58
5.6	Slow Divergence Integral of a Slow–Fast Cycle	59
5.7	Examples	60
5.7.1	Van der Pol	60
5.7.2	Some Canards in Quartic Liénard Systems.....	61
5.7.3	Zeros in the Slow Divergence Integral.....	62
6	Breaking Mechanisms	63
6.1	Normal Forms for Generic Jump Points and Generic Turning Points	63
6.2	Generic Jump Breaking Mechanism	64
6.3	Generic Hopf Breaking Mechanism.....	65
6.4	Formal Power Series Methods for the Generic Hopf Breaking Mechanism.....	67
6.5	Generic Breaking Mechanisms	68
6.6	Other Breaking Mechanisms.....	69
6.7	Examples	70
7	Overview of Known Results	73
7.1	Periodic Orbits Near Common Cycles	73
7.1.1	Existence of Periodic Orbits Near Common Cycles	75
7.1.2	Multiple Periodic Orbits Near Common Cycles	76
7.2	Unicity of Periodic Orbits Near Unbalanced Canard Cycles.....	76
7.3	Existence of Periodic Orbits Near Ordinary Canard Cycles	78
7.4	Entry–Exit Relations	81
7.5	Multiple Periodic Orbits in Layers	84
7.6	Contact Points of Higher Singularity Order Or Contact Order.....	86
7.7	Canard Cycles with Singularities in the Slow Vector Field	87
7.8	Multi-Layer Canard Cycles	88
7.8.1	Two-Layer Canard Cycles and Their Transitory Boundaries	88
7.8.2	More Than Two Layers.....	90
7.9	Birth of Canard Cycles.....	90
7.9.1	Birth of Canards in Liénard Systems	91
7.9.2	The Conjecture.....	92

7.9.3	The Infinite Codimension Case	93
7.9.4	Birth of Canard Cycles for the Slow–Fast Bogdanov–Takens Singularity	93
7.9.5	Birth of Canard Cycles for More Degenerate Contact Points	94

Part II Technical Tools

8	Blow-up of Contact Points	97
8.1	Blow-up Procedure	97
8.2	Blow-up of a Generic Jump Point	101
8.3	Blow-up of Regular Contact Points	106
8.3.1	The Saddle s_-	108
8.3.2	The Saddle s_+	109
8.3.3	The Semi-Hyperbolic Points	111
8.4	Blow-up of a Generic Turning Point	113
8.4.1	Blow-up of the Turning Point for $ a \gg \sqrt{\epsilon}$	117
8.4.2	Asymptotic Expansions in the Blow-up of the Hopf Point	118
8.5	Global Aspects in the Blow-up of Contact Points	119
8.5.1	Closed Form Expressions for the Orbits on the Blow-Up Locus of the Generic Jump Point	119
8.5.2	Passage Time in the Blow-up of Jump Points	123
8.5.3	Separatrices on the Blow-up Locus of the Generic Jump Point	126
8.5.4	Regular Splitting of Separatrices in the Blow-up of a Generic Turning Point	127
8.5.5	Hopf Breaking Mechanism Revisited	128
8.6	From the Hopf Bifurcation to the Polycycle and the Birth of Canards	129
9	Center Manifolds	131
9.1	C^k -Invariant Manifolds for Diffeomorphisms	131
9.2	C^k -Invariant Manifolds for Vector Fields	141
9.3	Smooth Invariant Manifolds in Slow–Fast Systems	144
9.3.1	The Case of a Closed Critical Curve	144
9.3.2	The Case of a Closed Critical Interval	146
9.3.3	The Case of a Critical Semi-Hyperbolic Point	147
9.3.4	The Case of Singularities of the Slow Vector Field	151
10	Normal Forms	153
10.1	Preliminaries	154
10.1.1	The Path Method	154
10.1.2	First Order Differential Equation	155

10.2	Regular Points of the Critical Curve.....	159
10.2.1	The Formal Solution.....	161
10.2.2	The Semi-Formal Solution	164
10.2.3	The Final Step	167
10.3	Semi-Hyperbolic Points in the Blow-up Locus	168
10.3.1	The Formal Solution.....	169
10.3.2	The Semi-Formal Solution	172
10.3.3	The Final Step	177
10.4	Construction of Center Manifolds	177
10.4.1	The Case of a Regular Interval	177
10.4.2	The Case of a Semi-Hyperbolic Point	180
10.4.3	Intervals Ending at a Semi-Hyperbolic Point	186
10.5	Hyperbolic Saddle Points in the Blow-up Locus	187
10.5.1	Resonant Monomial Vectors $u^\alpha v^\beta y^\gamma \partial_y$	188
10.5.2	Formal Normal Form	189
10.5.3	Reducing to a Differential Equation on Flat Functions ...	191
10.5.4	Solving the Differential Equation on Flat Functions.....	192
11	Smooth Functions on Admissible Monomials and More	193
11.1	Admissible Monomials and Functions in Admissible Monomials.....	193
11.2	Derivation.....	196
11.3	Counting the Number of Roots	198
11.4	Asymptotically Smooth Functions in Admissible Monomials	202
11.5	Functions of Exponentially Flat Type	203
11.5.1	Some Basic Properties of the Exponential Term	204
11.5.2	Coherence of Definition 11.9	208
11.5.3	Composition of Families of Diffeomorphisms of Exponentially Flat Type	210
 Part III Results and Open Problems		
12	Local Transition Maps	215
12.1	Transition Along an Arc of Regular Points of the Slow Dynamics	216
12.1.1	Transition in a Normal Form Chart	217
12.1.2	General Expressions for Regular Transitions	220
12.1.3	Properties of Transitions Along Regular Arcs	224
12.2	Transition Near Semi-Hyperbolic Points.....	226
12.2.1	Equation for the Transition Component \tilde{Z}	227
12.2.2	A Simple Case	228
12.2.3	Preparing the Function G	229
12.2.4	Estimates for the Integral I in (12.8)	232
12.2.5	Theorems for the Transition Map.....	235
12.2.6	Transitions Near Particular Semi-Hyperbolic Points	236

12.3	Transition Near Hyperbolic Saddle Points	239
12.3.1	The Transition Map in the Case $p = 1$	240
12.3.2	Transition in the General Case (for $p \in \mathbb{N}$)	242
12.3.3	The Saddle Points of Chap. 8	243
12.4	Transition at a Jump Point	246
12.5	Transition Along an Attracting Sequence	254
12.6	Transition Along a Hopf Attracting Sequence	258
13	Ordinary Canard Cycles	267
13.1	Introduction	267
13.2	Basic Settings	268
13.2.1	Difference Functions	268
13.2.2	Tubular Neighborhood of the Canard Cycle	273
13.3	Results of Bifurcation	274
13.3.1	A Mild Preparation for Eq. (13.11)	275
13.3.2	The Canard Phenomenon	276
13.3.3	Formal Power Series Expansion of the Canard Surface for Generic Hopf Breaking Mechanisms	276
13.3.4	Canard Explosion, Flying Canard, and Sitting Canards	278
13.3.5	Counting the Limit Cycles over a Whole Layer Strip	282
13.3.6	Limit Cycles and Bifurcations in a Rescaled Layer	285
13.3.7	Limit Cycles Outside the Rescaled Layer	298
14	Transitory Canard Cycles With Slow-fast Passage Through a Jump Point	305
14.1	Statement of the Results	306
14.2	Behavior of the Slow Divergence Integral	308
14.2.1	The Slow Divergence Integrals J , K , and L	308
14.2.2	Slow Divergence Integrals of Slow-fast Cycles	310
14.3	Local Study Near the Jump Point q	311
14.3.1	Blowing Up the Jump Point	312
14.3.2	Transition at the Saddle Point s	314
14.3.3	Transition at the Semi-Hyperbolic Point q_1	315
14.3.4	Transition at the Semi-Hyperbolic Point q_2	316
14.4	Transition Maps Outside the Jump Point q	318
14.5	Cyclicity of the Transitory Canard Cycle Γ_0	320
14.5.1	The Displacement Function Δ_η	320
14.5.2	Structure of the Transition Maps Toward \mathcal{T}	321
14.5.3	Covering of the Section C	324
14.5.4	Unique Maximum Properties	325
14.5.5	Proof of Theorem 14.1	336
14.6	Limit Cycles and their Unfoldings	337
14.6.1	Saddle-Node Bifurcation of Limit Cycles in Case I	339
14.6.2	Proof of Theorem 14.5	340

15	Transitory Canard Cycles with Fast–fast Passage Through a Jump Point	343
15.1	Introduction	343
15.2	Blow-up of the Jump Point	348
15.3	Transitions Near the Singular Points of \tilde{X}_λ	350
15.3.1	Transition at the Saddle Points s_\pm	351
15.3.2	Transition at the Semi-Hyperbolic Point q	353
15.4	Regular Transitions for \tilde{X}_λ Along the Blow-up Locus	354
15.4.1	Regular Transition Near the Interior of the Blow-up Locus.....	354
15.4.2	Regular Transition Near the Boundary of the Blow-up Locus.....	358
15.5	Cyclicity of the Canard Cycle	360
15.5.1	The Displacement Function Δ_η	360
15.5.2	Normal Form for Transitions Toward \mathcal{T}	362
15.5.3	From Global to Local Displacement Functions	363
15.5.4	Proof of Theorem 15.2 for Δ_η^m	366
15.5.5	Proof of Theorem 15.3 for Δ_η^d	369
15.5.6	Proof of Theorem 15.3 for Δ_η^u	375
15.6	Proof of the Main Theorem	379
16	Outlook and Open Problems	381
16.1	Introduction	381
16.2	Codimension.....	383
16.2.1	Codimension of Contact Points	383
16.2.2	Codimension of Jumps Between Contact Points.....	385
16.2.3	Codimension of Singularities of the Slow Vector Field	385
16.2.4	Codimension of a Slow–fast Unfolding	386
16.2.5	Codimension of a Canard Cycle	386
16.3	Desingularization of Unfoldings.....	389
16.3.1	Generic Unfoldings	389
16.3.2	Existence of Versal Unfoldings	392
16.3.3	Blowing Up of Versal Unfoldings	393
16.4	Analytic Slow–fast Unfoldings of Infinite Codimension	395
16.5	The Question of Finite Cyclicity for Canard Cycles.....	396
16.6	Disorienting Canard Cycles.....	397
16.7	Recapitulation of Open Problems and Questions	398
16.7.1	Questions About Codimension	398
16.7.2	Questions About Versal Unfoldings and their Desingularization	399
16.7.3	Questions About Asymptotic Properties	399

16.7.4	Questions About Analytic Unfoldings and Canard Cycles	400
16.7.5	Questions About the Finite Cyclicality Conjecture	400
16.7.6	Questions About Disorienting Canard Cycles.....	400
References	401
Index	407
