

# Contents

Chapter 1. Introduction	1
1.1. Smoluchowski's equation	1
1.2. Long-time behaviour and self-similarity	2
1.3. The equation for self-similar profiles	2
1.4. Finite mass, fat-tailed profiles and scale invariance	3
1.5. Existence and uniqueness of self-similar profiles	4
1.6. The constant kernel $K = 2$	4
1.7. Assumptions on the kernel $K$	5
1.8. Preliminary work and main result	7
1.9. The boundary layer at zero	8
1.10. Outline of the main ideas and strategy of the proof	9
Chapter 2. Functional setup and preliminaries	11
2.1. Function spaces and norms	11
2.2. Transforming the equation to Laplace variables	12
2.3. Notation and elementary properties of $\mathcal{T}$	14
Chapter 3. Uniqueness of profiles – Proof of Theorem 1.12	15
3.1. Key ingredients for the proof	15
3.2. Proof of Theorem 1.12	17
Chapter 4. Continuity estimates	19
4.1. Proof of Lemmas 3.1 and 3.3	19
4.2. Proof of Proposition 3.5	19
4.3. Estimates for differences – Proof of Proposition 3.6	21
Chapter 5. Linearised coagulation operator – Proof of Proposition 3.7	25
Chapter 6. Uniform bounds on self-similar profiles	29
6.1. A priori estimates for self-similar profiles	29
6.2. Uniform convergence in Laplace variables	32
6.3. Proof of Propositions 3.8 and 3.9	36
Chapter 7. The boundary layer estimate	41
7.1. Boundary layer equation	41
7.2. Preliminary estimates	45
7.3. Proof of Proposition 3.10	50
Chapter 8. The representation formula for $H_0(\cdot, q)$	59
8.1. Analyticity properties	59
8.2. Proof of Proposition 7.11	62

Chapter 9. Integral estimate on $\mathfrak{H}_0(\cdot, q)$	67
9.1. Proof of Proposition 7.12	67
Chapter 10. Asymptotic behaviour of several auxiliary functions	81
10.1. Bounds on moments	81
10.2. Asymptotic behaviour of $\beta_W$ and $\Phi$	82
10.3. Regularity properties close to zero	83
Appendix A. Useful elementary results	87
Appendix B. The representation formula for $W$	93
B.1. Proof of Proposition 1.2	93
B.2. Integral estimates on $\mathfrak{W}$	96
Appendix C. Existence of profiles	103
Acknowledgments	104
Bibliography	105
