

## CONTENTS

<b>1. Introduction</b>	1
1.1 The Importance of Solidification	1
1.2 Heat Extraction	5
1.3 Solidification Microstructures	11
1.4 Capillarity Effects	12
1.5 Solute Redistribution	15
<b>2. Atom Transfer at the Solid/Liquid Interface</b>	21
2.1 Conditions for Nucleation	22
2.2 Rate of Nucleus Formation	28
2.3 Interface Structure	34
<b>3. Morphological Instability of a Solid/Liquid Interface</b>	45
3.1 Interface Instability of Pure Substances	46
3.2 Solute Pile-Up at a Planar Solid/Liquid Interface	48
3.3 Interface Instability of Alloys	50
3.4 Perturbation Analyses	55
<b>4. Solidification Microstructure: Cells and Dendrites</b>	63
4.1 Constrained and Unconstrained Growth	65
4.2 Morphology and Crystallography of Dendrites	65
4.3 Diffusion Field at the Tip of a Needle-Like Crystal	69
4.4 Operating Point of the Needle Crystal - Tip Radius	74
4.5 Primary Spacing of Dendrites after Directional Growth	80
4.6 Secondary Spacing after Directional or Equiaxed Growth	85
<b>5. Solidification Microstructure: Eutectic and Peritectic</b>	93
5.1 Regular and Irregular Eutectics	94
5.2 Diffusion-Coupled Growth	96
5.3 Capillarity Effects	101
5.4 Operating Range of Eutectics	104
5.5 Competitive Growth of Dendrites and Eutectic	108
5.6 Peritectic Growth	111
<b>6. Solute Redistribution</b>	117
6.1 Mass-Balance in Directional Solidification	118
6.2 The Initial Transient	120
6.3 The Steady State	121
6.4 The Final Transient	122
6.5 Rapid Diffusion in the Liquid - Small Systems	122
6.6 Microsegregation	126

<b>7. Rapid Solidification Microstructures</b> .....	133
7.1 Departure from Local Equilibrium .....	134
7.2 Absolute Stability .....	139
7.3 Rapid Dendritic/Cellular Growth.....	142
7.4 Rapid Eutectic Growth.....	146
7.5 Intercellular Solute Redistribution.....	151
<b>Summary</b> .....	157
<b>Appendices</b> .....	163
1. Mathematical Modelling of Solidification.....	163
2. Solute and Heat Flux Calculations Related to Microstructure Formation...	177
3. Local Equilibrium at the Solid/Liquid Interface.....	199
4. Nucleation Kinetics in a Pure Substance .....	211
5. Atomic Structure of the Solid/Liquid Interface .....	216
6. Thermodynamics of Rapid Solidification.....	220
7. Interface Stability Analysis.....	226
8. Diffusion at a Dendrite Tip.....	238
9. Dendrite Tip Radius and Spacing .....	247
10. Eutectic Growth .....	261
11. Transient in Solute Diffusion.....	275
12. Mass Balance Equations .....	280
13. Homogenisation of Interdendritic Segregation in the Solid State .....	289
14. Relevant Physical Properties for Solidification .....	293
<b>Symbols</b> .....	295
<b>Index</b> .....	301
