

# CONTENTS

Chapter 1	INTRODUCTION	1
1.1	Ordinary Differential Equations	1
1.2	Solutions of a DE	3
1.3	Linear DEs	7
1.4	Origin of Differential Equations	10
1.4-1	Initial-value problem; boundary-value problem	11
1.4-2	Population dynamics	13
Chapter 2	THE HOMOGENEOUS FIRST-ORDER EQUATION	17
2.1	Introduction	17
2.2	The Homogeneous Equation and the Initial Value Problem	18
2.3	The Integrating Factor	23
*2.3-1	A uniqueness theorem	25
2.4	Applications and Qualitative Features of the Solution	26
2.4-1	Population dynamics	26
2.4-2	Chemical and biochemical kinetics	30
2.5	Periodic Coefficients; Time-Varying Electric Circuits	33

Chapter 3	THE FIRST-ORDER INHOMOGENEOUS LINEAR EQUATION	36
3.1	The Inhomogeneous Equation and the Initial Value Problem	36
3.2	Properties and Qualitative Features of the Solution	40
3.3	Applications	45
3.3-1	Mathematical models in psychology: learning theory	45
3.3-2	Population dynamics with immigration and emigration	48
3.3-3	Linear motion of a particle	51
Chapter 4	THE SECOND-ORDER HOMOGENEOUS LINEAR EQUATION WITH CONSTANT COEFFICIENTS	55
4.1	Introduction	55
4.2	Exponential Solutions	56
4.3	Case II. Complex Characteristic Roots	61
4.4	Case III. Repeated Characteristic Roots	66
4.5	General Solutions and the Initial Value Problem	70
4.5-1	The Wronskian and linear independence	74
*4.6	A Uniqueness Theorem	77
Chapter 5	APPLICATIONS OF THE SECOND-ORDER HOMOGENEOUS EQUATION	80
5.1	General Properties of the Solutions and Applications	80
5.2	Population Dynamics: A Predator-Prey Problem	87
5.3	The Vibrating Pendulum	92
5.4	The Vibrating Pendulum with Friction	96
5.5	The Decay of a Charge in a Series Electric Circuit	102
Chapter 6	BOUNDARY-VALUE AND EIGENVALUE PROBLEMS	104
6.1	Solution of Boundary-Value Problems	104
6.1-1	Diffusion of pollutants	108
6.2	Eigenvalue Problems	112
6.2-1	Buckling of elastic columns	117
Chapter 7	THE SECOND-ORDER INHOMOGENEOUS EQUATION WITH CONSTANT COEFFICIENTS	122
7.1	Introduction	122
7.2	The Method of Undetermined Coefficients	126
7.2-1	Exponential functions	126

	7.2-2	Trigonometric functions	129	
	7.2-3	Polynomials	130	
	7.2-4	Products and summary	132	
7.3		Variation of Parameters	134	
Chapter 8		APPLICATIONS OF THE SECOND-ORDER INHOMOGENEOUS EQUATION		139
	8.1	Properties of the Solutions and Applications	139	
	8.2	A Resource Management Problem	143	
	8.3	Forced Oscillations of a Pendulum	147	
	8.3-1	Beats and resonance	150	
	8.4	The Electro-Mechanical Analogy	156	
Chapter 9		THE $n$ TH-ORDER LINEAR EQUATION WITH CONSTANT COEFFICIENTS		158
	9.1	Introduction	158	
	9.2	Exponential Solutions	159	
	9.3	Repeated Roots	162	
	9.4	General Solutions and the Initial Value Problem	165	
	9.5	The Method of Undetermined Coefficients	170	
	9.6	Applications	174	
	9.6-1	Asymptotic stability; the Routh-Hurwitz test	174	
	9.6-2	Deflections of elastic beams	175	
	9.6-3	The vibrating beam	179	
Chapter 10		SYSTEMS OF LINEAR DIFFERENTIAL EQUATIONS WITH CONSTANT COEFFICIENTS		182
	10.1	Introduction	182	
	10.2	Method of Elimination	186	
	10.3	General Solutions and the Initial Value Problem	188	
	10.4	Coupled Pendulums; Normal Modes	193	
	10.5	Two-Loop Electric Networks	197	
Chapter 11		SECOND-ORDER LINEAR DIFFERENTIAL EQUATIONS WITH VARIABLE COEFFICIENTS		202
	11.1	Introduction	202	
	11.2	The Initial Value Problem	206	
	11.3	Reduction of Order	208	
	11.4	The Cauchy-Euler Equation	210	

Chapter 12	POWER SERIES SOLUTIONS	214
12.1	Introduction	214
12.2	Review of Power Series: Convergence	217
12.2-1	Manipulation	220
12.3	The Power Series Method	223
12.3-1	Second-order equations	226
12.4	Limitations of the Power Series Method	231
Chapter 13	THE METHOD OF FROBENIUS	235
13.1	Introduction	235
13.2	Elements of the Method	237
13.3	Special Cases	243
Chapter 14	NONLINEAR DIFFERENTIAL EQUATIONS	247
14.1	Introduction	247
14.2	Separable Equations	250
14.3	Exact Equations	255
14.4	General Remarks on First-Order Differential Equations	260
14.4-1	Geometric interpretation and graphical solutions	260
14.4-2	Existence of solutions	264
14.5	Applications of First-Order Nonlinear Differential Equations	268
14.5-1	Population dynamics: the logistic equation	268
14.5-2	Applications in the behavioral and biological sciences	274
14.5-3	Orthogonal trajectories	280
14.5-4	Rectilinear motion of a particle	283
Chapter 15	NUMERICAL METHODS	287
15.1	Introduction	287
15.2	Euler's Method	293
15.3	Discussion	300
15.4	Extrapolation of the Mesh Width	302
15.5	The Modified Euler Method	306
15.6	Population Dynamics with Immigration	311
Chapter 16	THE LAPLACE TRANSFORM	315
16.1	Introduction	315
16.2	Examples and Elementary Properties of Laplace Transforms	316

16.3	The Inverse Laplace Transform	322
16.4	Solution of Initial-Value Problems	325
16.5	Discontinuous Functions	330
16.6	Functions of Exponential Order and Existence of the Laplace Transform	337
Appendix I	MODEL FORMULATION	340
I.1	The Falling Particle	340
I.2	The Vibrating Pendulum	343
I.3	The Simple Electric Circuit	346
Appendix II	THE COMPLEX-VALUED EXPONENTIAL FUNCTION	350
Appendix III	IMPROPER INTEGRALS AND THE LAPLACE TRANSFORM	355
Answers to Exercises		359
