List of figures	xxii
1 Modeling, or where do differential equations come from	1
1.1 Mathematical modeling	2
1.2 Transport processes	4
1.3 Diffusion	8
1.4 The wave equation	9
1.5 The Black–Scholes equation	11
1.6 Let’s get higher dimensional	13
1.7* But there’s more	19
1.8 Classification of partial differential equations	25
1.9* Comments	26
1.10 Exercises	27
2 Classification and characteristics	29
2.1 Characteristics of initial value problems on \mathbb{R}	30
2.2 Equations of second order	39
2.3* Nonlinear equations of second order	43
2.4* Equations of higher order and systems	44
2.5 Exercises	45
3 Elementary methods	49
3.1 The one-dimensional wave equation	50
3.2 Fourier series	55
3.3 Laplace’s equation	63
3.4 The heat equation	74
3.5 The Black–Scholes equation	90
3.6 Integral transforms	96
3.7 Outlook	109
3.8 Exercises	110
4 Hilbert spaces	115
4.1 Inner product spaces	116
4.2 Orthonormal bases	120
4.3 Completeness	123

4.4	Orthogonal projections	125
4.5	Linear and bilinear forms	128
4.6	Weak convergence	135
4.7	Continuous and compact operators	138
4.8	The spectral theorem	139
4.9*	Comments on Chapter 4	150
4.10	Exercises	151
5	Sobolev spaces and boundary value problems in dimension one	155
5.1	Sobolev spaces in one variable	156
5.2	Boundary value problems on the interval	164
5.3*	Comments on Chapter 5	176
5.4	Exercises	176
6	Hilbert space methods for elliptic equations	181
6.1	Mollifiers	182
6.2	Sobolev spaces on $\Omega \subseteq \mathbb{R}^d$	189
6.3	The space $H_0^1(\Omega)$	196
6.4	Lattice operations on $H^1(\Omega)$	200
6.5	The Poisson equation with Dirichlet boundary conditions	204
6.6	Sobolev spaces and Fourier transforms	207
6.7	Local regularity	213
6.8	Inhomogeneous Dirichlet boundary conditions	219
6.9	The Dirichlet problem	222
6.10	Elliptic equations with Dirichlet boundary conditions	231
6.11	H^2 -regularity	233
6.12*	Comments on Chapter 6	236
6.13	Exercises	237
7	Neumann and Robin boundary conditions	241
7.1	Gauss's theorem	242
7.2	Proof of Gauss's theorem	247
7.3	The extension property	254
7.4	The Poisson equation with Neumann boundary conditions	258
7.5	The trace theorem and Robin boundary conditions	262
7.6*	Comments on Chapter 7	265
7.7	Exercises	266
8	Spectral decomposition and evolution equations	269
8.1	A vector-valued initial value problem	270
8.2	The heat equation: Dirichlet boundary conditions	274
8.3	The heat equation: Robin boundary conditions	280
8.4	The wave equation	283
8.5	Inhomogeneous parabolic equations	295
8.6*	Space/time variational formulations	304
8.7*	Comments on Chapter 8	308
8.8	Exercises	308

9	Numerical methods	313
9.1	Finite differences for elliptic problems	315
9.2	Finite elements for elliptic problems	330
9.3*	Extensions and generalizations	355
9.4	Parabolic problems	360
9.5	The wave equation	379
9.6*	Comments on Chapter 9	406
9.7	Exercises	408
10	Maple[®], or why computers can sometimes help	413
10.1	Maple [®]	414
10.2	Exercises	421
	Appendix	423
A.1	Banach spaces and linear operators	423
A.2	The space $C(K)$	425
A.3	Integration	426
A.4	More details on the Black–Scholes equation	428
	References	435
	Index of names	439
	Index of symbols	443
	Index	445
