

Contents

1 Algebraic Preliminaries	1
1.1 Polynomials	1
1.2 Modules over Polynomial Rings	10
1.3 Algebraic Extensions	18
1.4 Trace and Norm	26
1.5 Inseparable Extensions.....	32
1.6 Finite Fields	43
1.7 Central Simple Algebras.....	52
2 Non-Archimedean Fields	63
2.1 Valuations	64
2.2 Completions	69
2.3 Extensions of Valuations.....	79
2.4 Hensel's Lemma	87
2.5 Newton Polygon	92
2.6 Ramification and Inertia Group	98
2.7 Power Series.....	106
2.7.1 Convergence	106
2.7.2 Weierstrass Preparation Theorem	109
2.7.3 Weierstrass Factorization Theorem	112
2.7.4 Newton Polygon of Power Series	115
2.7.5 Formal Substitutions	119
2.8 Extensions of Valuations of Global Fields	123
3 Basic Properties of Drinfeld Modules	131
3.1 Additive Polynomials	132
3.2 Definition of Drinfeld Modules	143
3.3 Morphisms	150
3.4 Module of Morphisms	159
3.4.1 Anderson Motive of a Drinfeld Module	159
3.4.2 Embeddings into the Twisted Laurent Series Ring.....	164
3.5 Torsion Points	175

3.6	Torsion Points in Terms of Anderson Motives.....	183
3.7	Weil Pairing	192
3.7.1	Exterior Product of Anderson Motives	195
3.7.2	Weil Pairing via Explicit Formulas	200
3.7.3	Adjoint of a Drinfeld Module	206
3.8	Isomorphisms	212
4	Drinfeld Modules over Finite Fields	223
4.1	Endomorphism Algebras	224
4.2	Characteristic Polynomial of the Frobenius	234
4.3	Isogeny Classes	253
4.4	Supersingular Drinfeld Modules	261
5	Analytic Theory of Drinfeld Modules	273
5.1	Additive Power Series	274
5.2	Lattices and Drinfeld Modules	285
5.3	Applications of Analytic Uniformization	297
5.4	Carlitz Module and Zeta-Values.....	311
5.5	Fields Generated by Lattices of Drinfeld Modules	330
6	Drinfeld Modules over Local Fields	345
6.1	Reductions of Drinfeld Modules	346
6.2	Tate Uniformization.....	353
6.3	Galois Action on Torsion Points	366
6.4	Rational Torsion Submodule	376
6.5	Formal Drinfeld Modules.....	380
7	Drinfeld Modules Over Global Fields	391
7.1	Carlitz Cyclotomic Extensions	392
7.2	Rational Torsion Submodule	409
7.3	Division Fields: Examples	417
7.3.1	General Linear Group	419
7.3.2	Special Linear Group	421
7.3.3	Borel Subgroup	422
7.3.4	Split Cartan Subgroup	423
7.3.5	Non-split Cartan Subgroup	424
7.3.6	Normalizer of a Split Cartan Subgroup.....	425
7.3.7	Normalizer of a Non-split Cartan Subgroup.....	426
7.3.8	Boston-Ose Theorem	426
7.4	Division Fields: A Reciprocity Theorem	429
7.5	Complex Multiplication	441
7.6	Mordell-Weil Theorem and Class Number Formula	462
7.6.1	Poonen's Theorem	464
7.6.2	Taelman's Theorem	472
7.6.3	Anderson's Theorem.....	482

A Drinfeld Modules for General Function Rings	491
B Notes on Exercises	503
References	513
Index	521
