

## TABLE OF CONTENTS

Preface	1
PART 1 ELABORATIONS	
1 Truths and contradictions about Karl Popper	15
2 What do theories talk about? A critique of Popperian fallibilism, with especial reference to ontology	25
3 The place of the notion of corroboration in Karl Popper's philosophy of science	67
4 Karl Popper and the 'problem of induction': a fresh look at the logic of testing theories	79
5 Levels of criticism: handling Popperian problems in a Popperian way	91
6 On Popper's use of Tarski's theory of truth	103
PART 2 COMPETITIONS	
7 Russell and Karl Popper: their personal contacts	111
8 Karl Popper for and against Bertrand Russell	127
9 On Popper's philosophy and its prospects	143
PART 3 APPLICATIONS	
10 Notes on some methodological problems in the history of science	171
11 Structure-similarity as a cornerstone of the philosophy of mathematics	177
12 Solving Wigner's mystery: the reasonable (though perhaps limited) effectiveness of mathematics in the natural sciences	195
13 History or heritage? An important distinction in mathematics and for mathematics education	217
14 Not from nowhere. History and philosophy behind mathematical education	231

#### PART 4 SPECULATIONS

15	Decline of the philosophical spirit	249
16	Psychical research versus the established sciences	251
17	Psychical research and parapsychology: notes on the development of two disciplines	261
18	What are coincidences, and what are they good for?	281
19	Is psi intrinsically non-linguistic? Some preliminary considerations	299
20	Experience or innateness? Sir Karl Popper on the origins and acquisition of natural languages	311

#### PART 5 ADDITIONS

21	Types of generality in and around mathematics and logics	323
22	On receiving the Kenneth O. May Medal and Prize	331
	Index	337
