<i>Preface</i>	v
1. Hypergroups	1
1 Definition and basic properties	1
2 Some examples	16
2.1 Polynomial hypergroups	16
2.2 Hypergroups generated by families of multiplicative functions	23
2. Basics of harmonic analysis on hypergroups	29
1 Haar measures	29
2 Translation and convolution	40
3 Representation of hypergroups	50
4 Positive definiteness and $*$ -representations	63
3. Harmonic analysis on commutative hypergroups	81
1 Dual spaces	81
2 Plancherel's theorem	91
3 Inversion theorem	96
4 Comparison of the dual spaces	101
5 Regularity conditions and a functional calculus	111
6 L^p -transforms	125
7 Bochner theorem	133
8 Positive definiteness on dual spaces	140
9 Characterization of (inverse) Fourier-Stieltjes transforms	151

10	Positive characters and a modified convolution	162
11	Duality results based on $\mathcal{S}(K)$	168
11.1	Translation on L^2 and C_0	168
11.2	Surjectivity of Fourier- and inverse Fourier transforms	179
11.3	Bochner theorem on $\mathcal{S}(K)$	181
12	Invariant means and α -invariant functionals on commutative hypergroups	184
13	Reiter's P_1 -conditions for commutative hypergroups . . .	192
4.	Fourier analysis on polynomial hypergroups	205
1	Dual spaces	205
2	Comparison of dual spaces	211
3	Nevai class and dual spaces	218
4	Nonnegativity of linearization coefficients	223
5	Examples of polynomial hypergroups	231
5.1	Ultraspherical polynomials	231
5.2	Jacobi polynomials	233
5.3	Generalized Chebyshev polynomials	234
5.4	Associated ultraspherical polynomials	235
5.5	Pollaczek polynomials	237
5.6	Associated Pollaczek polynomials	239
5.7	Orthogonal polynomials with constant monic recursion formula	240
5.8	Karlin-McGregor polynomials	246
5.9	Random walk polynomials	249
5.10	Grinspun polynomials and some generalizations	250
5.11	Continuous q -ultraspherical polynomials	254
5.12	Little q -Legendre polynomials	258
6	Connection coefficients and property (T)	258
7	Growth condition (H) and Følner condition	270
8	Strongly invariant means on polynomial hypergroups . . .	278
9	Reiter's P_1 -conditions for polynomial hypergroups	283
10	Positive definite sequences and mean ergodic theorems	289
11	Boundedness of Haar weights and the Turan determinants	300
12	A Wiener Theorem	316

13	Homogeneous Banach spaces on S	319
13.1	Dual structure on S	319
13.2	Homogeneous Banach spaces on S	327
13.3	Quadratic forms and a differential operator	338
14	Orthogonal expansions	347
14.1	Triangular schemes and approximate identities	347
14.2	Construction of approximate identities	356
14.3	Selective approximate identities	368
15	Dual convolution and some representation results	375
15.1	Examples with dual convolution	375
15.2	Approximation kernels and representation results	377
16	Absolute convergence and uniform convergence of orthogonal series	384
16.1	Absolute convergence	385
16.2	Uniform convergence	389
17	Almost-convergent sequences with respect to polynomial hypergroups	395
17.1	Følner condition for $(S_n)_{n \in \mathbb{N}_0}$ and almost convergence	396
17.2	Properties of almost convergence	401
17.3	Multipliers for almost convergent sequences	408
5.	Weakly Stationary Random Fields on a Commutative Hypergroup	415
1	Definition and Representation	415
2	Occurrence of Random Fields on Hypergroups	423
2.1	Real and imaginary parts	423
2.2	Arithmetic mean estimates	425
2.3	Other mean estimates	425
2.4	Coefficients of random orthogonal expansions for density estimation	426
2.5	Stationary radial stochastic processes on homogeneous trees	428
2.6	Differences in sequences with stationary increments	429
2.7	Continuous arithmetic means	430

2.8	Other continuous means	430
2.9	Isotropic random fields	431
6.	Weakly stationary random sequences on a polynomial hypergroup	433
1	Moving Averages and Autoregression	433
2	Mean Estimation	446
3	Prediction	457
4	Translation-invariant linear filtering	471
5	\mathbf{R}_n -ARMA sequences	476
6	Decomposition	480
7.	Difference equations and stationary sequences on polynomial hypergroups	489
1	Difference equations induced by polynomial hypergroups	489
2	\mathbf{R}_n -stationary sequences and boundedness	494
3	Examples and autoregressive positive definite sequences	504
4	Multipliers of bounded R_n -stationary sequences	511
5	The imaginary part of T_n -stationary sequences	515
8.	Further hypergroup examples	521
1	Hypergroups based on group structures	521
1.1	Continuous actions	521
1.2	Hypergroups induced by $[FIA]_B^-$ -groups	523
1.3	Hypergroups induced by spherical projectors	534
2	Hypergroups and special functions	546
	<i>Bibliography</i>	559
	<i>Index</i>	597
