

# CONTENTS

Preface	xiii	3 Solving Equations	77
I PRELIMINARIES	1	3.1 Solving Equations	77
1 Essentials of Logic and Set Theory	3	3.2 Equations and Their Parameters	80
1.1 Essentials of Set Theory	3	3.3 Quadratic Equations	83
1.2 Essentials of Logic	10	3.4 Some Nonlinear Equations	89
1.3 Mathematical Proofs	16	3.5 Using Implication Arrows	91
1.4 Mathematical Induction	18	3.6 Two Linear Equations in Two Unknowns	92
Review Exercises	20	Review Exercises	96
2 Algebra	23	4 Functions of One Variable	99
2.1 The Real Numbers	23	4.1 Introduction	99
2.2 Integer Powers	26	4.2 Definitions	100
2.3 Rules of Algebra	33	4.3 Graphs of Functions	106
2.4 Fractions	38	4.4 Linear Functions	110
2.5 Fractional Powers	43	4.5 Linear Models	116
2.6 Inequalities	48	4.6 Quadratic Functions	120
2.7 Intervals and Absolute Values	52	4.7 Polynomials	127
2.8 Sign Diagrams	56	4.8 Power Functions	135
2.9 Summation Notation	59	4.9 Exponential Functions	136
2.10 Rules for Sums	62	4.10 Logarithmic Functions	141
2.11 Newton's Binomial Formula	66	Review Exercises	147
2.12 Double Sums	70	5 Properties of Functions	151
Review Exercises	72	5.1 Shifting Graphs	151
		5.2 New Functions from Old	156

5.3	Inverse Functions	160	8.5	Second-Derivative Tests	312
5.4	Graphs of Equations	166	8.6	Inflection Points	316
5.5	Distance in the Plane	170		Review Exercises	319
5.6	General Functions	174			
	Review Exercises	177			
<b>II</b>	<b>SINGLE VARIABLE CALCULUS</b>	<b>179</b>	<b>9</b>	<b>Optimization</b>	<b>321</b>
<b>6</b>	<b>Differentiation</b>	<b>181</b>	9.1	Extreme Points	321
6.1	Slopes of Curves	181	9.2	Simple Tests for Extreme Points	324
6.2	Tangents and Derivatives	183	9.3	Economic Examples	328
6.3	Increasing and Decreasing Functions	189	9.4	The Extreme and Mean Value Theorems	334
6.4	Economic Applications	192	9.5	Further Economic Examples	340
6.5	A Brief Introduction to Limits	195	9.6	Local Extreme Points	345
6.6	Simple Rules for Differentiation	201		Review Exercises	352
6.7	Sums, Products, and Quotients	205	<b>10</b>	<b>Integration</b>	<b>355</b>
6.8	The Chain Rule	212	10.1	Indefinite Integrals	355
6.9	Higher-Order Derivatives	218	10.2	Area and Definite Integrals	361
6.10	Exponential Functions	220	10.3	Properties of Definite Integrals	368
6.11	Logarithmic Functions	224	10.4	Economic Applications	373
	Review Exercises	230	10.5	Integration by Parts	380
<b>7</b>	<b>Derivatives in Use</b>	<b>233</b>	10.6	Integration by Substitution	384
7.1	Implicit Differentiation	233	10.7	Improper Integrals	389
7.2	Economic Examples	240		Review Exercises	396
7.3	The Inverse Function Theorem	244	<b>11</b>	<b>Topics in Finance and Dynamics</b>	<b>399</b>
7.4	Linear Approximations	248	11.1	Interest Periods and Effective Rates	399
7.5	Polynomial Approximations	253	11.2	Continuous Compounding	403
7.6	Taylor's Formula	256	11.3	Present Value	405
7.7	Elasticities	259	11.4	Geometric Series	408
7.8	Continuity	264	11.5	Total Present Value	414
7.9	More on Limits	270	11.6	Mortgage Repayments	419
7.10	The Intermediate Value Theorem	279	11.7	Internal Rate of Return	423
7.11	Infinite Sequences	283	11.8	A Glimpse at Difference Equations	425
7.12	L'Hôpital's Rule	287	11.9	Essentials of Differential Equations	428
	Review Exercises	292	11.10	Separable and Linear Differential Equations	435
<b>8</b>	<b>Concave and Convex Functions</b>	<b>295</b>		Review Exercises	441
8.1	Intuition	295	<b>III</b>	<b>MULTIVARIABLE ALGEBRA</b>	<b>445</b>
8.2	Definitions	297	<b>12</b>	<b>Matrix Algebra</b>	<b>447</b>
8.3	General Properties	305	12.1	Matrices and Vectors	447
8.4	First-Derivative Tests	309			

12.2	Systems of Linear Equations	450	<b>15 Partial Derivatives in Use</b>	<b>613</b>	
12.3	Matrix Addition	453	15.1	A Simple Chain Rule	613
12.4	Algebra of Vectors	455	15.2	Chain Rules for Many Variables	619
12.5	Matrix Multiplication	458	15.3	Implicit Differentiation along a Level Curve	623
12.6	Rules for Matrix Multiplication	463	15.4	Level Surfaces	628
12.7	The Transpose	470	15.5	Elasticity of Substitution	632
12.8	Gaussian Elimination	473	15.6	Homogeneous Functions of Two Variables	634
12.9	Geometric Interpretation of Vectors	479	15.7	Homogeneous and Homothetic Functions	639
12.10	Lines and Planes	487	15.8	Linear Approximations	645
	Review Exercises	492	15.9	Differentials	654
<b>13 Determinants, Inverses, and Quadratic Forms</b>	<b>495</b>		15.10	Systems of Equations	659
13.1	Determinants of Order 2	495	15.11	Differentiating Systems of Equations Review Exercises	663 669
13.2	Determinants of Order 3	499	<b>16 Multiple Integrals</b>	<b>673</b>	
13.3	Determinants in General	504	16.1	Double Integrals Over Finite Rectangles	673
13.4	Basic Rules for Determinants	508	16.2	Infinite Rectangles of Integration	680
13.5	Expansion by Cofactors	514	16.3	Discontinuous Integrand and Other Extensions	682
13.6	The Inverse of a Matrix	517	16.4	Integration Over Many Variables	684
13.7	A General Formula for the Inverse	524	<b>V MULTIVARIABLE OPTIMIZATION</b>	<b>687</b>	
13.8	Cramer's Rule	527	<b>17 Unconstrained Optimization</b>	<b>689</b>	
13.9	The Leontief Model	531	17.1	Two Choice Variables: Necessary Conditions	690
13.10	Eigenvalues and Eigenvectors	536	17.2	Two Choice Variables: Sufficient Conditions	694
13.11	Diagonalization	543	17.3	Local Extreme Points	699
13.12	Quadratic Forms	547	17.4	Linear Models with Quadratic Objectives	705
	Review Exercises	556	17.5	The Extreme Value Theorem	712
<b>IV MULTIVARIABLE CALCULUS</b>	<b>559</b>		17.6	Functions of More Variables	717
<b>14 Functions of Many Variables</b>	<b>561</b>		17.7	Comparative Statics and the Envelope Theorem	722
14.1	Functions of Two Variables	561		Review Exercises	728
14.2	Partial Derivatives with Two Variables	565			
14.3	Geometric Representation	571			
14.4	Surfaces and Distance	578			
14.5	Functions of $n$ Variables	581			
14.6	Partial Derivatives with Many Variables	586			
14.7	Convex Sets	590			
14.8	Concave and Convex Functions	595			
14.9	Economic Applications	606			
14.10	Partial Elasticities	608			
	Review Exercises	610			

<b>18 Equality Constraints</b>	<b>731</b>	<b>20 Nonlinear Programming</b>	<b>797</b>
18.1 The Lagrange Multiplier Method	731	20.1 Two Variables and One Constraint	797
18.2 Interpreting the Lagrange Multiplier	739	20.2 Many Variables and Inequality Constraints	804
18.3 Multiple Solution Candidates	742	20.3 Nonnegativity Constraints	812
18.4 Why Does the Lagrange Multiplier Method Work?	744	Review Exercises	817
18.5 Sufficient Conditions	749	<b>Appendix</b>	<b>819</b>
18.6 Additional Variables and Constraints	753	Geometry	819
18.7 Comparative Statics	759	The Greek Alphabet	822
Review Exercises	765	Bibliography	822
<b>19 Linear Programming</b>	<b>769</b>	<b>Solutions to the Exercises</b>	<b>823</b>
19.1 A Graphical Approach	770	<b>Index</b>	<b>943</b>
19.2 Introduction to Duality Theory	776	<b>Publisher's Acknowledgements</b>	<b>953</b>
19.3 The Duality Theorem	781		
19.4 A General Economic Interpretation	786		
19.5 Complementary Slackness	788		
Review Exercises	794
