

Contents

1	Lecture 1: General Introduction	1
2	Lecture 2: Kronecker's Rationality Criteria and Grothendieck's p-Curvature Conjecture	9
2.1	Kronecker's Criteria	9
2.1.1	Kronecker's Analytic Criterion, [Kro57]	9
2.1.2	Kronecker's Algebraic Criterion, [Bau04]	10
2.1.3	Translation of Kronecker's Algebraic Criterion in Terms of Differential Equations	10
2.2	Grothendieck's p -Curvature Conjecture	12
2.3	Back to Kronecker's Analytic Criterion: Gauß-Manin Connections	14
3	Lecture 3: Malčev-Grothendieck's Theorem, Its Variants in Characteristic $p > 0$, Gieseker's Conjecture, de Jong's Conjecture, and the One to Come	19
3.1	Over \mathbb{C}	19
3.2	Over an Algebraically Closed Field of Characteristic $p > 0$	20
3.3	Over a p -Adic Field	21
4	Lecture 4: Interlude on Some Similarity Between the Fundamental Groups in Characteristic 0 and $p > 0$	23
4.1	Lubotzky's Theorem	23
4.2	Tame Fundamental Group	24
4.3	Grothendieck's Specialization Homomorphism, [SGA1], Exposé X, Exposé XIII	24
4.4	Finite Generation	26
4.5	Proof of Theorem 4.5, the $\ell \neq p$ Part	26
4.6	Proof of Theorem 4.5, the p Part	28
5	Lecture 5: Interlude on Some Difference Between the Fundamental Groups in Characteristic 0 and $p > 0$	31
5.1	Serre's Construction	31

5.2	Various Obstructions	31
5.3	An Abstract Obstruction to Lift to Characteristic 0, Based on the Structure of the Fundamental Group.....	32
5.4	Main Definition.....	33
5.5	Independence of ℓ and Schur Rationality	34
5.6	The Roquette Curve, Combined with Serre's Construction	36
6	Lecture 6: Density of Special Loci	37
6.1	Definitions	37
6.2	Why Quasi-unipotent Monodromies at Infinity.....	38
6.3	Density Theorem for Quasi-unipotent Local Systems.....	39
6.4	Remarks.....	41
6.5	Some Other Dense or Not Dense Loci	41
6.6	Arithmetic Local Systems Are Not Dense: The Work of Biswas-Gupta-Mj-Whang and Landesman-Litt.....	44
6.6.1	Statement	44
6.6.2	Rigidity	46
6.6.3	Proof of Theorem 6.7	47
6.7	Weakly Arithmetic Complex Local Systems.....	49
6.7.1	Definitions.....	49
6.7.2	Density	51
7	Lecture 7: Companions, Integrality of Cohomologically Rigid Local Systems and of the Betti Moduli Space	53
7.1	Motivation on the Complex Side	53
7.2	Analogy Over a Finite Field	54
7.3	Geometricity	56
7.4	On Drinfeld's Proof	57
7.4.1	Reductions.....	57
7.4.2	Boundedness	59
7.4.3	Moduli	59
7.4.4	Gluing	62
7.5	Cohomologically Rigid Local Systems Are Integral, See [EG18], Theorem 1.1	62
7.6	Integrality of the Whole Betti Moduli Space, See [dJE22], Theorem 1.1	64
7.7	Obstruction	65
8	Lecture 8: Rigid Local Systems and F-Isocrystals	67
8.1	Crystalline Site, Crystals and Isocrystals.....	67
8.2	Nilpotent Crystalline Site, Crystals and Isocrystals	68
8.3	The Frobenius Action on the Set of Crystals on the Nilpotent Crystalline Site	69
8.4	The Frobenius Induces an Isomorphism on Cohomology in Characteristic 0	70
8.5	Proof of [EG20], Theorem 1.6.....	72

9	Lecture 9: Rigid Local Systems, Fontaine-Laffaille Modules and Crystalline Local Systems	75
9.1	The Main Theorems	75
9.1.1	Good Model in the Projective Case	75
9.1.2	Theorem in the Projective Case	76
9.1.3	Good Model in the Quasi-projective Case	77
9.1.4	Theorem in the Quasi-projective Case	77
9.2	Simpson's Versus Ogus-Vologodsky's Correspondences in the Projective Case	78
9.3	Periodic de Rham-Higgs Flow on X_S and the $GL_r(\overline{\mathbb{F}}_p)$ -local Systems on X_K in the Projective Case.....	79
9.4	Periodic de Rham-Higgs Flow on \hat{X}_W and the $GL_r(W(\overline{\mathbb{F}}_p))$ -local Systems on X_K in the Projective Case.....	80
9.5	From Crystalline p -Adic Local Systems on X_K to p -Adic Local Systems on $X_{\bar{K}}$ in the Projective Case	81
9.6	Remarks.....	82
10	Lecture 10: Comments and Questions	83
10.1	With Respect to the p -Curvature Conjecture (Chap. 2)	83
10.2	With Respect to the Mal'cev-Grothendieck's Theorem and Its Shadows in Characteristic $p > 0$ (Chap. 3)	83
10.3	With Respect to Lubotzky's Theorem 4.2.....	83
10.4	With Respect to Theorem 4.7.....	84
10.5	With Respect to Theorems 5.3 and 5.10	84
10.6	With Respect to Theorem 6.2	85
10.7	With Respect to Theorem 7.6 and a More Elaborate Version of Theorem 7.8, See Theorem [dJE22, Theorem 1.4]	85
10.8	With Respect to Theorem 7.8.....	85
10.9	With Respect to Chaps. 8 and 9	85
	Reference	87
