

Contents

1	Introduction	1
1.1	The construction of ch_{BC}	2
1.2	The Riemann-Roch-Grothendieck theorem	2
1.2.1	The case of embeddings	3
1.2.2	The case of projections	3
1.2.3	The spectral truncations	3
1.3	Earlier work	4
1.4	The organization of the book	5
2	Bott-Chern cohomology and characteristic classes	7
2.1	The Bott-Chern cohomology	7
2.2	The Bott-Chern Laplacian of Kodaira-Spencer	8
2.3	Functorial properties of Bott-Chern cohomology	10
2.4	Bott-Chern characteristic classes of holomorphic vector bundles .	11
3	The derived category $D_{\text{coh}}^{\text{b}}(X)$	15
3.1	Definition of the derived category $D_{\text{coh}}^{\text{b}}(X)$	15
3.2	Derived pullbacks	16
3.3	Derived tensor products	16
3.4	Derived direct images	17
4	Preliminaries on linear algebra and differential geometry	19
4.1	Filtered vector space and exterior algebras	19
4.2	Supercommutators and supertraces	22
4.3	Morphisms and cones	23
4.4	Generalized Hermitian metrics	24
4.5	Clifford algebras	26
4.6	A simple remark of differential geometry	27

5	The antiholomorphic superconnections of Block	29
5.1	The antiholomorphic superconnections	29
5.2	A conjugation result	31
5.3	Antiholomorphic superconnections and coherent sheaves	35
5.4	The determinant line bundle	37
5.5	The case where $\mathcal{H}\mathcal{E} = 0$	38
5.6	Superconnections, morphisms, and cones	40
5.7	Antiholomorphic superconnections and pullbacks	41
5.8	Antiholomorphic superconnections and tensor products	42
6	An equivalence of categories	43
6.1	Some properties of $D_{\text{coh}}^b(X)$	43
6.2	Three categories	45
6.3	The functor F_X	46
6.4	The functor \underline{F}_X	55
6.5	The functor \underline{F}_X as an equivalence of categories	55
6.6	Compatibility with pullbacks	57
6.7	Compatibility with tensor products	58
6.8	Compatibility with direct images	59
7	Antiholomorphic superconnections and generalized metrics	61
7.1	The adjoint of an antiholomorphic superconnection	61
7.2	Curvature	64
8	Generalized metrics and Chern character forms	67
8.1	The Chern character forms	68
8.2	A trivial example	71
8.3	The Chern character of pullbacks	72
8.4	Chern character and tensor products	73
8.5	The case where $\mathcal{H}\mathcal{E}$ is locally free	73
8.6	The Chern character forms and the scaling of the metric	74
8.7	The Chern character of a cone	76
8.8	The Chern character on $D_{\text{coh}}^b(X)$	77
8.9	The Chern character on $K(X)$	78
8.10	Spectral truncations	80
9	The case of embeddings	85
9.1	Embeddings, direct images, and transversality	85
9.2	Deformation to the normal cone	88
9.3	A Riemann-Roch-Grothendieck theorem for embeddings	89
9.4	The uniqueness of the Chern character	93

10	Submersions and elliptic superconnection forms	95
10.1	A Riemann-Roch-Grothendieck theorem for submersions	95
10.2	Replacing \mathcal{F} by \mathcal{E}	96
10.3	The adjoint of $A^{p, \mathcal{E}_0''}$	97
10.4	Some connections on TX	100
10.5	A Lichnerowicz formula for $A^{\mathcal{D}, 2}$	103
10.6	A Lichnerowicz formula for $A^{p, \mathcal{E}_0, 2}$	105
10.7	The elliptic superconnection forms	106
11	Elliptic superconnection forms and direct images	109
11.1	Spectral truncations in infinite dimensions	109
11.2	The existence theorem	111
11.3	The Chern character of the direct image	112
11.4	The case where $\mathcal{H}Rp_*\mathcal{E}$ is locally free	114
12	A proof of Theorem 10.1.1 when $\bar{\partial}^X \partial^X \omega^X = 0$	117
13	The hypoelliptic superconnections	125
13.1	The total space of \widehat{TX}	126
13.2	A Hermitian metric on \widehat{TX}	126
13.3	The antiholomorphic superconnection \mathcal{E}_M	128
13.4	A metric description of $A^{E_M''}$	129
13.5	The adjoint of \mathcal{A}''	130
13.6	The antiholomorphic superconnection $A_z^{E_M''}$	131
13.7	The superconnection \mathcal{A}_Z	131
13.8	Two Hermitian forms	133
13.9	Self-adjointness of $\mathcal{A}_Z, \mathcal{B}_Z$	135
13.10	A formula for the curvature of \mathcal{A}_Z	136
13.11	The hypoelliptic curvature	139
13.12	Scaling the metric $g^{\widehat{TX}}$	140
13.13	Hypoelliptic and elliptic superconnections	141
14	The hypoelliptic superconnection forms	145
14.1	Construction of the hypoelliptic superconnection forms	145
14.2	The limit as $b \rightarrow 0$ of the hypoelliptic superconnection forms	146
15	The hypoelliptic superconnection forms when $\bar{\partial}^X \partial^X \omega^X = 0$	149
15.1	Finite and infinite-dimensional traces	149
15.2	The time parameter	152
15.3	The case when $\bar{\partial}^X \partial^X \omega^X = 0$	155
16	Exotic superconnections and Riemann-Roch-Grothendieck	163
16.1	A deformation of the fundamental 2-form ω^X	164
16.2	A formula for $\mathcal{A}_{Z, \theta}^2$	164
16.3	The superconnection $\mathcal{A}_{Y, \theta}$	165

16.4	The scaling identities	166
16.5	The uniform estimates	167
16.6	The exotic superconnection forms of vector bundles	168
16.7	The limit as $t \rightarrow 0$ of $\text{ch} \left(\mathcal{A}_Y'', \omega^X/t, g^D, g^{\widehat{TX}}/t^3, \theta_t \right)$	169
16.8	A proof of Theorem 10.1.1	173
