Preface	xi
<b>Part I: General Theory</b>	
Chapter 1. Snippets from Spectral Theory	3
§1.1. Introduction	3
§1.2. A Crash Course on Banach and Hilbert Spaces	5
§1.3. Bounded Linear Operators	15
§1.4. Self-Adjoint Operators and the Spectral Theorem	24
§1.5. Dual Spaces and Locally Convex Topologies	39
§1.6. Spectral Decompositions and Quantum Dynamics	46
§1.7. Uniform and Semi-Uniform Localization Properties	56
§1.8. Refined Spectral Decompositions and Transport Exponents	61
§1.9. Stieltjes Transforms and Derivatives of Finite Measures	79
§1.10. Poltoratski's Theorem	93
§1.11. Poltoratski–Remling's Theorem	103
§1.12. Measurability of Eigenfunctions à la Gordon–Kechris	107
§1.13. $SL(2, \mathbb{R})$ and $SL(2, \mathbb{C})$	113
§1.14. Avalanche Principle	122
§1.15. Further Reading and Miscellanea	132
Chapter 2. Schrödinger Operators in $\ell^2(\mathbb{Z})$	135
§2.1. Introduction	135
§2.2. Definitions and Basic Identities	137

§2.3.	Oscillation Theory	156
§2.4.	Spectrum and Generalized Eigenfunctions	159
§2.5.	The Combes–Thomas Estimate	165
§2.6.	Basic Bounds on Spreading	168
§2.7.	The Jitomirskaya–Last Inequality and Subordinacy Theory	179
§2.8.	Fractional Subordinacy and Refined Spectral Decompositions	195
§2.9.	The Last–Simon Description of the Absolutely Continuous Part	199
§2.10.	Quantum Dynamics à la Damanik and Tcheremchantsev	208
§2.11.	Further Reading and Miscellanea	221
Chapter 3.	Snippets from Ergodic Theory and Topological Dynamics	225
§3.1.	Introduction	225
§3.2.	Definitions and Examples	227
§3.3.	The Birkhoff Pointwise Ergodic Theorem	238
§3.4.	Kingman’s Subadditive Ergodic Theorem	243
§3.5.	Ergodicity in the Topological Setting	247
§3.6.	Minimality	263
§3.7.	Topological Entropy	266
§3.8.	Unimodular Cocycles	278
§3.9.	Flows, Suspensions, and the Schwartzman Homomorphism	292
§3.10.	Further Reading and Miscellanea	305
Chapter 4.	General Results for Ergodic Schrödinger Operators	307
§4.1.	Introduction	307
§4.2.	Nonrandomness of Spectra and Spectral Types	309
§4.3.	The Integrated Density of States	315
§4.4.	The Lyapunov Exponent	323
§4.5.	Subharmonicity of the Lyapunov Exponent	327
§4.6.	The Thouless Formula and Applications	332
§4.7.	Kotani Theory in the Measurable Setting	342
§4.8.	Kotani Theory in the Topological Setting	363
§4.9.	Uniform Results in the Topological Setting	379
§4.10.	The Gap-Labeling Theorem	386
§4.11.	An Invitation to Ergodic Jacobi Matrices	392
§4.12.	Further Reading and Miscellanea	400

---

Appendix A. Tools from Harmonic Analysis	403
§A.1. The Fourier and Hilbert Transforms	403
§A.2. Potential Theory	410
§A.3. Subharmonic Functions	418
Glossary of Notation	423
Bibliography	425
Index	441
