Chapter 1. Introduction	1
Acknowledgments	8
Chapter 2. Preliminaries	9
2.1. Non-Archimedean valued fields	9
2.2. Examples	10
2.3. T.d.l.c. groups	12
2.4. The local prime content	13
2.5. Normed vector spaces over non-Archimedean valued fields	15
2.6. The $p$ -adic Haar integral	16
2.7. Divisible groups	17
Chapter 3. First examples and constructions	21
3.1. Constructions	22
3.2. $p^{\mathbb{N}}$ -freeness	24
3.3. Compact groups	25
Chapter 4. Characterization of normed $p$ -adic amenability	29
4.1. Proof of Theorem 4.0.1	29
4.2. Proof of Theorem 1.0.9	33
4.3. Corollaries	34
Chapter 5. Examples	37
5.1. Discrete groups	37
5.2. Profinite groups	43
5.3. Matrix groups over non-Archimedean local fields	45
5.4. Groups of tree automorphisms	48
5.5. Non-simplicity of 2-adic amenable groups	51
Chapter 6. Characterization over other fields	55
6.1. The non-spherically complete case	56
6.2. The spherically complete case	57
6.3. Ordered fields	58
Chapter 7. Bounded cohomology of normed $\mathbb{K}$ -amenable groups	61
7.1. Continuous bounded cohomology	61
7.2. Left uniformly continuous bounded cohomology	61
7.3. Characterization for discrete groups	64
7.4. Profinite representations	66

Chapter 8. More results on bounded cohomology	69
8.1. Bar resolution, comparison map, and duality	69
8.2. Degrees 0 and 1	71
8.3. 1-quasicocycles of compactly generated groups	72
8.4. Surjectivity of the comparison map	73
Chapter 9. Quasimorphisms	77
9.1. The defect group	78
9.2. $\mathbb{K}$ -valued quasimorphisms and $D(\mathbb{K})$ -valued homomorphisms	79
9.3. $\mathbb{Q}_p$ -valued quasimorphisms	82
9.4. Additivity	86
9.5. Higher-dimensional quasicocycles	90
Chapter 10. Bounded cohomology of topological spaces	93
10.1. Definitions	94
10.2. Proof of Theorem 10.0.1	95
10.3. Non-Archimedean simplicial volume	97
10.4. Relation to bounded cohomology of groups	98
Bibliography	101
