Preface	xi
1 Basic assumptions of a new psychology of language	1
1.1 Introduction	1
1.2 Embodiedness	2
1.3 Embeddedness	5
1.4 Mental models	7
1.5 Incremental processing	9
1.6 Consequences of this view on language	10
1.7 Overview of the book	12
2 Language and communication	14
2.1 Introduction	14
2.2 Verbal and non-verbal communication	14
2.3 Language and communication in context	17
2.4 The medium and the message	18
2.4.1 McLuhan: The medium is the message	18
2.4.2 McLuhan: The medium is the <i>massage</i>	19
2.5 Evolution of communication and language	19
2.6 The Sender–Receiver model of communication	24
2.7 What is next?	25
2.8 What have we learned?	25
3 Language User Framework	27
3.1 Introduction	27
3.2 The Language User Framework	28
3.2.1 Parallel and sequential processing components	31
3.2.2 Complex language activities in daily life	32
3.2.3 Cognitive control and Working Memory	33
3.2.4 How the Language User Framework relates to the brain	34
3.2.5 Language and other cognitive domains	35
3.2.6 Language development, second language acquisition, and multilingualism	36

3.2.7	Linguistics and psycholinguistics	38
3.2.7.1	Phonetics and phonology	39
3.2.7.2	Lexicology and morphology	39
3.2.7.3	Syntax (grammar)	40
3.2.7.4	Semantics and pragmatics	40
3.2.7.5	Bringing the disciplines together	41
3.3	What is next?	42
3.4	What have we learned?	43
4	Language research techniques	45
4.1	Introduction	45
4.2	The experimental basics	45
4.3	Research techniques measuring word retrieval	48
4.3.1	Off-line measurement: Memory	48
4.3.2	On-line measurement: Behavioral reaction time and neuroscientific studies	49
4.4	Behavioral reaction time tasks	50
4.4.1	Lexical decision: Visual and auditory	50
4.4.2	Word naming	53
4.4.3	Picture naming	54
4.5	Techniques used at word and sentence level	55
4.5.1	Self-paced reading	55
4.5.2	Eye tracking	56
4.5.2.1	Using eye tracking to study natural reading	56
4.5.2.2	Using eye tracking in reading experiments	56
4.5.2.3	Using eye tracking in the visual world paradigm	58
4.6	Neurophysiological and neuroimaging techniques	59
4.6.1	Electroencephalography (EEG)	59
4.6.2	Magnetoencephalography (MEG)	62
4.6.3	Functional magnetic resonance imaging (fMRI)	62
4.6.4	Positron emission topography (PET)	64
4.6.5	Computerized axial tomography (CAT/CT)	64
4.7	Combining experimental control with ecological validity	65
4.7.1	Computer screen paradigms	65
4.7.2	In-lab interaction paradigms	66
4.7.3	Virtual reality paradigms	67
4.8	What is next?	69
4.9	What have we learned?	69
5	Recognizing spoken words	71
5.1	Spoken word recognition: The essence	71
5.2	Spoken word recognition: Representations	73
5.3	Spoken word recognition: Processes	78
5.3.1	Categorical perception	78
5.3.2	Phoneme restoration	79
5.4	Models of spoken word recognition	80
5.4.1	Cohort model	80
5.4.2	TRACE model	82

- 5.4.3 Shortlist model 84
- 5.4.4 Recent computational developments 85
- 5.4.5 A neurobiological approach to spoken word recognition 85
- 5.5 Spoken word recognition: Empirical studies 86
 - 5.5.1 Lexical embeddings and Cohort's sequentiality assumption 87
 - 5.5.2 Speed of spoken word recognition 88
 - 5.5.3 Time-course of spoken word recognition and top-down effects 89
- 5.6 Spoken word recognition: The role of context 91
 - 5.6.1 Fast effects of linguistic and non-linguistic context on spoken word recognition 92
 - 5.6.2 Context effects: The role of your mental model of the speaker 95
 - 5.6.3 Context effects: The role of embodiedness 96
- 5.7 What is next? 97
- 5.8 What have we learned? 97

6 Recognizing printed and written words 99

- 6.1 Printed and written word recognition: The essence 99
- 6.2 Printed and written word recognition: Representations 101
 - 6.2.1 Letter features and letters 102
 - 6.2.2 Syllables and morphemes 103
 - 6.2.3 Writing systems or scripts: Shallow vs. deep orthography 104
- 6.3 Printed and written word recognition: Processes 105
 - 6.3.1 Are words looked up in the lexicon one by one or in parallel? 106
- 6.4 Models of visual word recognition 107
 - 6.4.1 Interactive Activation model 108
 - 6.4.1.1 Strengths of the IA model 110
 - 6.4.1.2 Limitations of the IA model 110
 - 6.4.2 Spatial Coding model 111
 - 6.4.3 Dual Route Cascaded model 113
 - 6.4.4 Multilink model 115
 - 6.4.5 Parallel distributed processing models 118
 - 6.4.6 Recent computational developments 119
- 6.5 Printed and written word recognition: Empirical studies 120
 - 6.5.1 Speed of printed word recognition 121
 - 6.5.2 Activation of phonology in word reading 122
 - 6.5.3 Activation of orthography during listening 123
- 6.6 Visual word recognition: The role of context 124
 - 6.6.1 Cross-modal priming with lexical decision 124
 - 6.6.2 Predicting words in sentence context 126
- 6.7 What is next? 127
- 6.8 What have we learned? 127

7 Sentence processing 129

- 7.1 Sentence processing: The essence 129
- 7.2 Sentence processing: Representations 131
 - 7.2.1 Difficult sentences: Embedded sentences 133
 - 7.2.2 Difficult sentences: Garden path sentences 134

- 7.3 Sentence processing: Processes 135
 - 7.3.1 Incremental processing: Tracking the eyes 135
 - 7.3.2 Integration of syntactic and semantic information over time 137
 - 7.3.3 Integration vs. prediction 139
- 7.4 Models of sentence processing 140
 - 7.4.1 Garden Path model 140
 - 7.4.2 Referential theory of parsing 141
 - 7.4.3 Constraint-based model of sentence processing 142
 - 7.4.4 Unrestricted race model 142
 - 7.4.5 Neurobiological models of sentence processing 142
 - 7.4.6 Computational models of sentence processing 146
- 7.5 Sentence processing: Empirical studies 148
- 7.6 Sentence processing: The role of context 152
- 7.7 What is next? 155
- 7.8 What have we learned? 155

8 Meaning

158

- 8.1 Meaning: The essence 158
- 8.2 Meaning: Representations 161
 - 8.2.1 Sense and reference 161
 - 8.2.2 Word meaning representations 162
 - 8.2.2.1 Semantic networks 162
 - 8.2.2.2 WordNet 163
 - 8.2.2.3 Semantic features 164
 - 8.2.2.4 Featural and Unitary Semantic Space 164
 - 8.2.2.5 Exemplar and instance theory 165
 - 8.2.2.6 Prototypes 166
 - 8.2.2.7 Semantic space based on global co-occurrence 166
 - 8.2.2.8 Embodied representation 167
 - 8.2.3 Sentence meaning representations 168
 - 8.2.4 Text meaning representations 169
 - 8.2.5 Meaning in the brain 170
- 8.3 Meaning: Processes 171
 - 8.3.1 Embodiedness: Effects of other cognitive modalities 171
 - 8.3.2 Linking the meaning of subsequent sentences by inferences 174
 - 8.3.2.1 Bridging inferences 174
 - 8.3.2.2 Elaborative inferences: Forward and backward 174
 - 8.3.2.3 Inferences: Anaphors and antecedents 175
 - 8.3.3 Thinking and reasoning 177
- 8.4 Models of meaning 178
 - 8.4.1 Models of sentence and text processing 178
 - 8.4.1.1 Construction-Integration model 179
 - 8.4.1.2 CAPS/READER model 180
 - 8.4.1.3 Event indexing and event segmentation 181
 - 8.4.1.4 Cognitive control and the mental model 182
- 8.5 Meaning: Empirical studies 182
 - 8.5.1 Semantic illusions 182
 - 8.5.2 Semantic integration of words and pictures 183

- 8.6 Meaning: The role of context 185
 - 8.6.1 Finding the correct referent using prosody 185
 - 8.6.2 From literal to non-literal meaning: The larger discourse context 187
- 8.7 What is next? 188
- 8.8 What have we learned? 189

9 Language production

191

- 9.1 Language production: The essence 191
- 9.2 Language production: Representations 192
- 9.3 Language production: Processes 196
 - 9.3.1 Language production and the Language User Framework 196
 - 9.3.2 Conceptualizer 198
 - 9.3.3 Formulator 200
 - 9.3.3.1 Syntactic encoding 200
 - 9.3.3.2 Lemma retrieval 201
 - 9.3.3.3 The complex interaction between syntactic encoding and lemma retrieval 202
 - 9.3.3.4 Morphophonological encoding 203
 - 9.3.4 Articulator 203
- 9.4 Models of language production 206
 - 9.4.1 Slot-and-filler models of language production 206
 - 9.4.2 Standard model of language production 207
 - 9.4.3 Interactive Activation model for word production 208
 - 9.4.4 Models of tone language production 209
 - 9.4.5 Interface Hypothesis 210
- 9.5 Language production: Empirical studies 212
 - 9.5.1 Picture-word interference paradigm 213
 - 9.5.2 Syntactic priming paradigm 214
 - 9.5.3 Neuroscientific studies 215
 - 9.5.4 Studies eliciting speech production errors 216
 - 9.5.4.1 Lexical bias effects in elicited speech errors 216
 - 9.5.4.2 Freudian speech errors 217
 - 9.5.4.3 Induced subject-verb agreement errors 217
- 9.6 Language production: The role of context 218
 - 9.6.1 Language production in a dialog context 218
 - 9.6.2 Multimodal language production 220
- 9.7 What is next? 221
- 9.8 What have we learned? 221

10 Multilingualism

224

- 10.1 Multilingualism: The essence 224
- 10.2 Multilingualism: Representations 225
 - 10.2.1 Cross-linguistic similarity of word representations 226
 - 10.2.2 Cross-linguistic similarity of syntactic representations 229
 - 10.2.3 Storing words and grammar of multiple languages: One or two systems? 230

10.3	Multilingualism: Processes	231
10.3.1	Processing words and sentences in multiple languages: One or two systems?	231
10.3.2	The interaction of bottom-up and top-down processes	232
10.4	Models of multilingual processing and control	234
10.4.1	Revised Hierarchical Model	234
10.4.2	Distributed Conceptual Feature model	234
10.4.3	Bilingual Interactive Activation models	235
10.4.4	Multilink model	235
10.4.5	Inhibitory and Adaptive Control models	237
10.5	Multilingualism: Empirical studies	239
10.5.1	Multilingual word retrieval	239
10.5.2	Multilingual sentence processing	244
10.5.3	Multilingual language production and control	246
10.6	Multilingualism: The role of context	248
10.6.1	Semantic effects of sentence context	249
10.6.2	Task- and stimulus-related context effects	250
10.7	What is next?	252
10.8	What have we learned?	253

11 Conclusion and outlook

255

11.1	Introduction	255
11.2	Expanding the four basic assumptions of the book	256
11.2.1	Embodiedness, multimodality, and interactivity	256
11.2.2	Embeddedness, symbol hierarchy, and interactivity	258
11.2.3	Incrementality, time-scale, and interactivity	259
11.2.4	The mental model as an interface for language and other cognitive faculties	261
11.3	Expanding the Language User Framework	263
11.3.1	The Multimodal Language User Framework	263
11.3.2	Language in the overarching cognitive system	265
11.4	Biases in the psychology of language	267
11.5	Outlook: Diversity, dialog, and digital developments	270
11.5.1	Acknowledging linguistic and cultural diversity	270
11.5.2	Shift of focus from monolog to dialog	272
11.5.3	Advances in human-computer interaction	273
11.5.4	Development and use of large language models	275
11.5.5	Computational models of human language processing	276
11.6	What have we learned?	278
11.7	Final remarks	278
