

Contents

Chapter 1. Introduction	1
1.1. Spanning subgraphs in hypercubes	1
1.2. Hamilton cycles in binomial random graphs	1
1.3. Hamilton cycles in binomial random subgraphs of the hypercube	2
1.4. Hitting time results	3
1.5. Randomly perturbed graphs	4
1.6. Percolation on the hypercube	5
1.7. Organisation of the paper	6
Chapter 2. Outline of the main proofs	7
2.1. Overall outline	7
2.2. Building block I: Trees via branching processes	7
2.3. Building block II: Cube tilings via the nibble	8
2.4. Constructing a long cycle	8
2.5. Constructing a Hamilton cycle	10
2.6. Hitting time for the appearance of a Hamilton cycle	12
2.7. Edge-disjoint Hamilton cycles	12
Chapter 3. Notation	13
Chapter 4. Probabilistic tools	15
Chapter 5. Auxiliary results	17
5.1. Results about matchings	17
5.2. Properties of random subgraphs of the hypercube	20
Chapter 6. Tiling random subgraphs of the hypercube with small cubes	27
6.1. The Rödl nibble	27
6.2. Iterating the nibble	35
Chapter 7. Near-spanning trees in random subgraphs of the hypercube	41
7.1. Constructing a bounded degree near-spanning tree	42
7.2. Extending the tree	56
7.3. The repatching lemma	57
Chapter 8. Hamilton cycles in randomly perturbed dense subgraphs of the hypercube	61
8.1. Layers, molecules, atoms, and absorbing structures	61
8.2. Bondless and bondlessly surrounded molecules	63

8.3. Connecting cubes	65
8.4. Proof of Theorem 8.1	71
8.5. Proofs of Theorems 1.1, 1.2 and 1.7	92
Chapter 9. Hitting time result	95
9.1. Absorbing structures for vertices with small degree	95
9.2. Auxiliary lemmas	98
9.3. Hamilton cycles in robust subgraphs of the cube	103
9.4. Proofs of Theorem 1.8 and Theorem 1.5	124
Bibliography	127
Index	131
