Chapter 1. Introduction	1
1.1. Focusing Hartree Φ_3^4 -measure and its canonical stochastic quantization	1
1.2. Hartree Gibbs measures	9
Acknowledgments	18
Chapter 2. Invariant dynamics for Hartree SdNLW	19
2.1. Main results	19
2.2. Paracontrolled approach: Defocusing case	21
2.3. Focusing case	28
Chapter 3. Notations and basic lemmas	31
3.1. Sobolev and Besov spaces	31
3.2. On discrete convolutions	33
3.3. Tools from stochastic analysis	35
Chapter 4. On the stochastic terms	39
Chapter 5. Construction of the Gibbs measures	45
5.1. Proof of Lemma 5.1	46
5.2. Variational formulation	48
5.3. Exponential integrability in the defocusing case for $\beta > 1$	49
5.4. Exponential integrability for the focusing case: The non-endpoint case $\beta > 2$	53
5.5. Non-normalizability of the focusing Gibbs measure	55
5.6. Focusing Gibbs measure at the critical value $\beta = 2$	63
Chapter 6. Further analysis in the defocusing case: $0 < \beta \leq 1$	67
6.1. Construction of the defocusing Gibbs measure: $\frac{1}{2} < \beta \leq 1$	67
6.2. Tightness for $0 < \beta \leq \frac{1}{2}$	70
6.3. Uniqueness of the limiting Gibbs measure for $0 < \beta \leq \frac{1}{2}$	79
6.4. Singularity of the defocusing Gibbs measure for $0 < \beta \leq \frac{1}{2}$	83
Chapter 7. Paracontrolled operators	91
Chapter 8. Local well-posedness of Hartree SdNLW	101
Chapter 9. Invariant Gibbs dynamics	107
9.1. On the truncated dynamics	108
9.2. Proof of Theorem 2.1	117
Appendix A. On the parabolic stochastic quantization of the focusing Hartree Gibbs measure	125

Appendix B. On the regularities of the stochastic terms	129
Appendix C. Absolute continuity with respect to the shifted measure	131
Bibliography	139
