

Contents

Chapter 1. Introduction	1
1.1. Outline of the article	5
1.2. Notation	5
Chapter 2. Partial regularity in the interior	7
2.1. The ε -regularity theorem	7
2.2. Monotonicity formula	7
2.3. Energy density	9
2.4. Convergence of singular points	9
2.5. Tangent maps	9
2.6. Stratification of the singular set	11
2.7. Classification of tangent maps into \mathbb{S}^2	11
2.8. Additional properties of singularities of minimizers into \mathbb{S}^2	12
Chapter 3. Monotonicity formula and tangent maps at the boundary	15
3.1. Notation for “straightening” the boundary	15
3.2. Boundary monotonicity formula	16
3.3. Tangent maps at the boundary	19
Chapter 4. Refined estimates by Naber and Valtorta	21
Chapter 5. Extension property and its consequences	23
5.1. Extension lemma	23
5.2. Uniform boundedness	27
5.3. Caccioppoli inequality and higher local integrability	30
Chapter 6. Strong convergence for minimizers and its consequences	35
6.1. Strong convergence with variable boundary	39
Chapter 7. Boundary regularity for smooth and singular boundary data in $W^{1,n-1}$	43
7.1. Uniform boundary regularity for constant boundary data	43
7.2. Uniform boundary regularity for singular boundary data	45
7.3. Hot spots	47
Chapter 8. Hardt and Lin’s stability of singularities for $n \geq 3$	53
8.1. Outline	54
8.2. Behavior of top-dimensional singularities	54
8.3. Local case	56
8.4. Global case	58
8.5. The case $n = 3$	61

Chapter 9. Almgren and Lieb's linear law: Size of the singular set	63
Chapter 10. Final remarks	65
10.1. Examples	65
10.2. Remarks about the optimal boundary norm in higher dimensions	70
10.3. Remarks about other target manifolds	71
Appendix A. Trace theorems	73
A.1. A trace theorem	73
A.2. A Counterexample	76
Bibliography	79
