

Contents

Chapter 1. Introduction	1
1.1. High friction scalings of the Vlasov–Navier–Stokes system	2
1.2. Formal derivation of the limits	5
1.3. Main results of this work	7
Chapter 2. State of the Art and Methodology of this Work	13
2.1. State of the art	13
2.2. Strategy	15
2.3. Outline of the proofs and organization of the paper	17
Chapter 3. Preliminary Results	27
3.1. Weak solutions	27
3.2. Conservation laws for the Vlasov equation	29
3.3. Higher regularity estimate for the Navier–Stokes equations	31
3.4. Rough bounds on the first moments	34
3.5. Modulated energy dissipation	35
3.6. Changes of variable in velocity or in space	38
3.7. Estimates on the convection term	41
3.8. Initialization of the bootstrap argument	42
Chapter 4. The <i>Light</i> and <i>Light and Fast</i> Particle Regimes	45
4.1. Uniform estimates on the Brinkman force in L^p	46
4.2. Conclusion of the bootstrap argument in the mildly well–prepared case	51
4.3. Convergence in the mildly well–prepared and well–prepared cases	55
4.4. Application to long time behavior	63
4.5. Convergence in the general case	64
Chapter 5. The Fine Particle Regime	65
5.1. Uniform estimates on the Brinkman force in L^p	66
5.2. Conclusion of the bootstrap argument in the well–prepared case	70
5.3. Non quantitative convergence in the well–prepared case	74
5.4. Relative entropy estimates	79
5.5. Convergence in the mildly well–prepared case	84
Chapter 6. Back to the <i>Light</i> and <i>Light and Fast</i> Particle Regimes	87
6.1. Uniform $L^{\frac{p}{p-1}}L^p$ estimates	87
6.2. Conclusion of the bootstrap and proof of convergence under optimal assumptions	89

6.3. Higher dissipation and relative entropy in the <i>light</i> and <i>light and fast</i> particle regimes	92
Chapter 7. Further Developments	95
7.1. The case of dimension two	95
7.2. High friction limits for mixtures	95
7.3. Derivation of a Boussinesq–Navier–Stokes system	100
7.4. Open problems	102
Appendix A. Some Technical Reminders	105
A.1. Sobolev and Besov (semi-)norms and Wasserstein–1 distance	105
A.2. Gagliardo–Nirenberg interpolation estimates	106
A.3. Perturbation of the identity map	106
A.4. Estimates for smooth solutions to the incompressible Navier–Stokes equations	107
A.5. Maximal parabolic regularity	107
Bibliography	109
Index	115
