

# Contents

<b>1</b>	<b>Introduction</b> .....	1
1.1	Refinement of the Conjecture .....	5
1.2	Results for Complex Projective Spaces .....	12
1.3	Results for Complex Grassmannians .....	16
1.4	Plan of the Paper.....	19
<b>2</b>	<b>Gromov–Witten Theory and Quantum Cohomology</b> .....	23
2.1	Notations and Preliminaries.....	23
2.2	Quantum Cohomology and its Semisimplicity.....	25
2.3	Extended Deformed Connection and Topological Solution .....	29
2.4	Idempotent Vielbein and $\Psi$ -Matrix.....	36
2.5	Monodromy Data as Local Moduli .....	37
2.5.1	Inverse Problem for Frobenius Manifolds .....	47
<b>3</b>	<b>Helix Theory in Triangulated Categories</b> .....	53
3.1	Prerequisites .....	53
3.2	Notations and Preliminaries.....	54
3.3	Exceptional Objects and Mutations.....	57
3.4	Semiorthogonal Decompositions, Admissible Subcategories, and Mutations Functors .....	64
3.5	Saturatedness and Serre Functors.....	69
3.6	Dual Exceptional Collections and Helices .....	71
3.6.1	Left and Right Dual Exceptional Collections.....	71
3.6.2	Geometrical Dual Exceptional Collection .....	74
3.6.3	Helices .....	74
3.6.4	$m$ -Blocks .....	77
<b>4</b>	<b>Non-symmetric Orthogonal Geometry of Mukai Lattices</b> .....	79
4.1	Grothendieck Group and Mukai Lattices.....	79
4.1.1	Geometrical Dual Exceptional Basis .....	84

4.2	Isometries and Canonical Operator .....	85
4.3	Adjoint Operators and Canonical Algebra .....	87
4.4	Isometric Classification of Mukai Structures .....	88
4.5	Geometric Case: The Derived Category $\mathcal{D}^b(X)$ .....	91
<b>5</b>	<b>The Main Conjecture</b> .....	<b>97</b>
5.1	Original Version of the Conjecture and Known Results .....	97
5.2	Relationships with Zaslow's Conjecture for Solutions of $tt^*$ -Equations .....	100
5.3	Gamma Classes, Graded Chern Character, and Morphisms $\Pi_X^\pm$ .....	101
5.4	Refined Statement of the Conjecture .....	102
5.5	Relations with Kontsevich's Homological Mirror Symmetry .....	112
5.6	Galkin-Golyshev-Iritani $\Gamma$ -Conjecture II and its Relationship with Conjecture 5.2 .....	117
<b>6</b>	<b>Proof of the Main Conjecture for Projective Spaces</b> .....	<b>125</b>
6.1	Notations and Preliminaries .....	125
6.2	Computation of the Topological-Enumerative Solution .....	128
6.3	Computation of the Group $\mathcal{C}_0(\mathbb{P})$ .....	132
6.4	Computation of the Central Connection Matrix .....	135
6.5	Reduction to Beilinson Form .....	140
6.6	Mutations of the Exceptional Collections .....	151
6.7	Monodromy Data Along the Small Quantum Cohomology, and Some Results on the Big Quantum Cohomology .....	158
6.8	Symmetries and Quasi-Periodicity of Stokes Matrices Along the Small Quantum Locus .....	163
<b>7</b>	<b>Proof of the Main Conjecture for Grassmannians</b> .....	<b>171</b>
7.1	Results on the Classical Cohomology of $\mathbb{G}$ .....	172
7.2	Quantum Cohomology of $\mathbb{G}$ as Exterior Power of the Quantum Cohomology of $\mathbb{P}$ .....	179
7.3	Computation of the Fundamental Systems of Solutions and Monodromy Data .....	184
7.4	Reduction to (Twisted) Kapranov Form .....	188
7.5	Geometry of the Affine Grassmannian and Classical/Quantum Satake Correspondence .....	193
7.5.1	Langlands Duality .....	193
7.5.2	The Affine Grassmannian $\mathcal{G}r_G$ .....	194
7.5.3	Classical Geometric Satake Correspondence .....	196
7.5.4	Quantum Cohomology and the Affine Grassmannian .....	199
7.6	Reinterpretation of the Results for $\mathbb{G}(2, 4)$ .....	201
7.7	Symmetries and Quasi-Periodicity of the Stokes Matrices Along the Small Quantum Locus .....	206

<b>A Basic Notions on Pure Motives</b> .....	209
A.1 Universality of Chow Motives .....	211
<b>B Tabulation of Stokes Matrices for <math>\mathbb{G}(r, k)</math> for Small <math>k</math></b> .....	215
<b>References</b> .....	223
<b>Index</b> .....	233
