

Contents

Chapter 1. Introduction	1
1.1. Main result	1
1.2. Historical background	2
1.3. Strongly positively recurrent actions	3
1.4. Outline of the proofs	4
Chapter 2. Patterson-Sullivan measures in hyperbolic spaces	7
2.1. Gromov hyperbolic spaces	7
2.2. Patterson-Sullivan measures	10
2.3. The Bowen-Margulis current	12
Chapter 3. Strongly positively recurrent actions	15
3.1. Entropy outside a compact set	15
3.2. Examples	15
3.3. Radial limit set	19
Chapter 4. Ergodicity of the Bowen-Margulis current	25
4.1. The measurable geodesic flow of Bader-Furman	25
4.2. Changing spaces	28
4.3. Conservativity of the flow	28
4.4. The Hopf argument	29
4.5. Finiteness of the Bowen-Margulis measure	39
Chapter 5. A twisted Patterson-Sullivan measure	47
5.1. Main theorem	47
5.2. Ultra-limit of Hilbert spaces	48
5.3. Conformal family of operator valued measures	50
5.4. Twisted measure on the Gromov boundary	54
5.5. Absolute continuity	56
5.6. Invariant vectors	61
Chapter 6. Applications to group theory	67
6.1. Amenability	67
6.2. Rigidity and growth gap	74
6.3. Counterexamples	75
Chapter 7. Comments and questions	79
7.1. Generalizations of Theorem 1.1 and its variations	79
7.2. Twisted Patterson-Sullivan measures	79

Appendix A. Integration of vector-valued functions	81
A.1. Bochner spaces	81
A.2. The Radon-Nikodym property	84
Appendix B. Banach lattices	85
B.1. Definitions and main properties	85
B.2. Examples	86
Bibliography	89
