

Contents

Chapter 1. Introduction	1
1.1. Overview	1
1.2. Main result	2
1.3. The C^0 -estimate	3
1.4. Outline of chapters	5
Chapter 2. Preliminaries	7
2.1. Cones	7
2.2. Steady Ricci solitons	13
Chapter 3. Asymptotics of Cao's steady gradient Kähler-Ricci soliton	19
Chapter 4. Constructing a background metric and the equation set-up	35
4.1. Construction of an approximate soliton	35
4.2. Set-up of the complex Monge-Ampère equation	39
Chapter 5. Poincaré inequality for steady gradient Ricci solitons	43
Chapter 6. Invertibility of the drift Laplacian: Exponential case	47
6.1. Main setting	47
6.2. Function spaces	52
6.3. Preliminaries and Fredholm properties of the linearised operator	53
6.4. Small perturbations of steady gradient Kähler-Ricci solitons: Exponential case	57
Chapter 7. A priori estimates	61
7.1. A priori C^0 -estimate	62
7.2. A priori estimates on higher derivatives	72
7.3. Weighted a priori estimates	80
7.4. Proof of Theorem 7.1	85
Chapter 8. Invertibility of the drift Laplacian: Polynomial case	87
8.1. Function spaces	87
8.2. Preliminaries and Fredholm properties of the linearised operator	88
8.3. Small perturbations of steady gradient Kähler-Ricci solitons: Polynomial case	91
8.4. Surjectivity of the drift Laplacian	92
Chapter 9. Proof of Theorem A	97
9.1. Existence	97
9.2. Uniqueness	102

Appendix A. The model metric \hat{g}	109
Bibliography	117
