List of Symbols	vii
Chapter 1. Background, goals, and outline	1
1.1. Background	1
1.2. Goals	2
1.3. Outline	3
Part 1. Model and Main Results	5
Chapter 2. Introduction of model and basic properties	7
2.1. Model: Geographic space Ω_N , hierachical group of order N	7
2.2. Evolution equations	11
2.3. Well-posedness	14
2.4. Duality	15
2.5. Clustering criterion	19
Chapter 3. Main results: $N < \infty$, identification of clustering regime	21
3.1. Finite mean wake-up time	21
3.2. Infinite mean wake-up time	22
3.3. Clustering regime	24
Chapter 4. Main results: $N \rightarrow \infty$, renormalisation and multi-scale limit	25
4.1. Intermezzo: Meyer-Zheng topology	25
4.2. Main ingredients for the hierarchical multi-scale limit	26
4.3. Hierarchical multi-scale limit theorems	29
4.4. Heuristics behind the multi-scale limit	34
Chapter 5. Main results $N \rightarrow \infty$: Orbit and cluster formation	45
5.1. Orbit of renormalisation transformations	45
5.2. Growth of mono-type clusters	46
5.3. Rates of scaling for renormalised diffusion functions	50
Part 2. Preparations and Proofs	53
Chapter 6. Proofs: $N < \infty$, identification of clustering regime	55
6.1. Explanation of clustering criterion for infinite seed-bank	55
6.2. Scaling of wake-up time and migration kernel for infinite seed-bank	56
6.3. Hierarchical clustering	58
Chapter 7. Preparation: $N \rightarrow \infty$, McKean-Vlasov process and mean-field	61
7.1. McKean-Vlasov process	61

7.2.	Mean-field system and McKean-Vlasov limit	63
7.3.	Proof of equilibrium and ergodicity	64
7.4.	Proof of McKean-Vlasov limit	66
Chapter 8.	Proofs: $N \rightarrow \infty$, mean-field finite-systems scheme	67
8.1.	Mean-field finite-systems scheme	67
8.2.	Abstract scheme behind finite-systems scheme	71
Chapter 9.	Proofs: $N \rightarrow \infty$, mean-field, proof of abstract scheme	79
9.1.	Proof of step 1. Equilibrium of the single components	79
9.2.	Proof of step 2. Convergence of the estimator	90
9.3.	Proof of step 3. Convergence of the 1-blocks in the Meyer-Zheng topology	94
9.4.	Proof of step 4. Mean-field finite-systems scheme	95
Chapter 10.	Preparation: $N \rightarrow \infty$, two-colour mean-field	99
10.1.	Two-colour mean-field finite-systems scheme	99
10.2.	Proof of the two-colour mean-field finite-systems scheme	104
Chapter 11.	Preparation: $N \rightarrow \infty$, two-level three-colour	121
11.1.	Two-level three-colour mean-field finite-systems scheme	121
11.2.	Scheme for the two-level three-colour mean-field analysis	131
11.3.	Proof of two-level three-colour mean-field finite-systems scheme	133
Chapter 12.	Proofs: $N \rightarrow \infty$, hierarchical multi-scale limit theorems	167
12.1.	Finite-level mean-field finite-systems scheme and interaction chain	167
12.2.	Proof of the mean-field finite-systems scheme: Finite-level	173
12.3.	Proof of the hierarchical multi-scale limit theorems	178
Chapter 13.	Proofs: $N \rightarrow \infty$, orbit of renormalisation transformation	181
13.1.	Moment relations	181
13.2.	Iterate moment relations	184
13.3.	Clustering	185
13.4.	Dichotomy finite versus infinite seed-bank	189
Appendix A.	Computation of scaling coefficients	193
A.1.	Regularly varying coefficients	193
A.2.	Pure exponential coefficients	195
A.3.	Slowly varying functions	196
Appendix B.	Meyer-Zheng topology	197
B.1.	Basic facts about the Meyer-Zheng topology	197
B.2.	Pseudopaths of stochastic processes on a general metric separable space	197
B.3.	Proof of key lemmas	200
Bibliography		205
