Chapter 1. Introduction	1
1.1. Statement of results	2
1.2. Proof strategy for Theorem 1.1	3
Chapter 2. Features of Hitchin representations and the Hitchin component	5
2.1. Frenet curves and $\mathrm{PGL}(V)$ -Hitchin representations	5
2.2. Positivity of $\mathrm{PGL}(V)$ -Hitchin representations	7
2.3. Real-analytic structure of the $\mathrm{PGL}(V)$ -Hitchin representations	9
2.4. The tangent space to $\mathrm{Hit}_V(S)$	10
2.5. The Goldman symplectic form	12
Chapter 3. Topological constructions	15
3.1. Ideal triangulations on S	15
3.2. Barrier systems	16
3.3. Bridge systems	17
Chapter 4. Tangent cocycles for the Hitchin component	19
4.1. Preliminaries to define the tangent cocycle	19
4.2. Defining the tangent cocycle in special cases	22
4.3. Defining the tangent cocycle in general	28
4.4. Properties of Ψ	31
Chapter 5. The $(\mathcal{T}, \mathcal{J})$ -trivialization of $T\mathrm{Hit}_V(S)$	33
5.1. Eruption endomorphisms	34
5.2. Shearing endomorphisms	38
5.3. The linear map Ξ	41
5.4. Description of Ω and the $(\mathcal{T}, \mathcal{J})$ -parallel vector fields	48
Chapter 6. The $(\mathcal{T}, \mathcal{J})$ -trivialization of $\mathrm{Hit}_V(S)$ is symplectic	53
6.1. A triangulation of S	53
6.2. The cup product of parallel vector fields	56
Chapter 7. A symplectic basis of vector fields on $\mathrm{Hit}_V(S)$	63
7.1. Choice of ideal triangulation and compatible bridge system	63
7.2. Special parallel vector fields	64
7.3. Internal and external parts	69
7.4. The internal part of $\omega_{[\rho]}(\mathcal{X}'([\rho]), \mathcal{X}([\rho]))$	70
7.5. The external part of $\omega_{[\rho]}(\mathcal{X}'([\rho]), \mathcal{X}([\rho]))$	72
7.6. Explicit computations for the proof of Theorem 7.9	75
Bibliography	87
