

Contents

Chapter 1. Introduction	1
1.1. The stable classification for fundamental group $\mathbb{Z} \times \mathbb{Z}/2$	2
1.2. Review of stable classification	3
1.3. Translating the bordism invariants into algebra	4
1.4. Context for our work	10
Acknowledgments	11
Chapter 2. Background	13
2.1. Stable diffeomorphism, bordism groups, and spectral sequences	13
2.2. Topological 4-manifolds and stable homeomorphism	17
2.3. Whitehead's certain exact sequence and the Γ functor	17
Chapter 3. The secondary obstruction	21
3.1. The equivariant intersection form	21
3.2. Sesquilinear forms and Tate cohomology	23
3.3. Relating $H_3(\pi; \mathbb{Z}/2)$ with symmetric modulo even forms	26
3.4. Proof of the Secondary Property Theorem	29
Chapter 4. The tertiary obstruction	39
4.1. Relating the tertiary obstruction with the Kervaire–Milnor invariant	39
4.2. The Tertiary Property for finite groups	45
Chapter 5. Inheritance results	47
5.1. Secondary property inheritance	47
5.2. Tertiary property inheritance	49
5.3. Reduction to odd index subgroups	55
Chapter 6. Examples	61
6.1. The secondary and tertiary properties for three families of groups	61
6.2. The secondary and tertiary properties for abelian groups	65
Chapter 7. The stable classification for fundamental group $\mathbb{Z} \times \mathbb{Z}/2$	83
7.1. The case $\beta(M) \in \{\pm 1, \pm 3\}$	86
7.2. The case $\beta(M) \in \{0, \pm 2, 4\}$	89
7.3. The case $\beta(M) \in \{0, 4\}$	91
Bibliography	97
