Chapter 1. Introduction	1
1.1. Periodic vortex patches solutions	2
1.2. Quasi-periodic solutions	3
1.3. Main result and ideas of the proof	5
Acknowledgments	18
Chapter 2. Hamiltonian reformulation	19
2.1. Contour dynamics equation	19
2.2. Conservation laws	21
2.3. Hamiltonian structure and reversibility	23
Chapter 3. Linearization and frequencies structure	27
3.1. Linearized operator	27
3.2. Structure of the linear frequencies	32
3.2.1. Monotonicity and asymptotic behavior	32
3.2.2. Non-degeneracy and transversality	34
3.3. Linear quasi-periodic solutions	41
Chapter 4. Functional tools	43
4.1. Function spaces	43
4.2. Classical operations	44
4.3. Modified periodic fractional Laplacian	52
Chapter 5. Hamiltonian toolbox	55
5.1. Action-angle coordinates	55
5.2. Hamiltonian regularity	58
Chapter 6. Berti-Bolle approach for the approximate inverse	61
6.1. Linear change of variables	62
6.2. Defect of the symplectic structure	66
6.3. Construction of an approximate inverse	69
Chapter 7. Toroidal pseudo-differential operators	75
7.1. Operators and reversibility	75
7.2. Symbol class topology	76
7.3. Continuity and law products	80
7.4. Commutators	88
Chapter 8. New approach related to Egorov theorem	93
8.1. Nonlocal pseudo-differential hyperbolic equation	93
8.2. Töplitz matrices and binomial convolution	99

8.3. Refined Egorov's theorem	102
8.3.1. Tame estimates of the iterated commutators	122
8.3.2. Iterated kernel estimates	131
8.3.3. Iterated Töplitz matrix operators	146
Chapter 9. Reducibility of the linearized operator	153
9.1. Structure on the normal direction	154
9.2. Asymptotic structure	157
9.3. Reduction of the transport part	161
9.3.1. Transport equation with constant coefficients	162
9.3.2. Straightening of the transport equation	163
9.4. First conjugation of the linearized operator	187
9.5. Reduction of the nonlocal part	195
9.6. Complete reduction up to small errors	204
9.6.1. Frequency localization of operators	205
9.6.2. Localization on the normal direction	209
9.6.3. KAM reduction of the remainder term	215
9.6.4. Approximate inverse in the normal direction	240
Chapter 10. Proof of the main result	245
10.1. Nash-Moser scheme	245
10.2. Final Cantor set estimates	260
Appendix A	271
Bibliography	275
