A Para-Controlled Approach to the Stochastic Yang-Mills Equation in Two Dimensions

Bjoern Bringmann
Sky Cao

March 2026 • Volume 319 • Number 1624 (fourth of 6 numbers)

Contents

Chapter 1. Introduction	1
1.1. Main results	3
1.2. Open problems	8
1.2.1. Global well-posedness of the stochastic Yang-Mills heat equation	8
1.2.2. Random geometric wave equations	9
1.3. Overview of the article	10
Chapter 2. Preliminaries	13
2.1. Parameters	13
2.2. Explicit geometric formulas	13
2.3. Harmonic analysis	14
2.4. Function spaces and heat propagator	18
2.5. Lie groups and Lie algebras	20
Chapter 3. Para-controlled Ansatz	23
Chapter 4. Vector-valued multiple stochastic integrals	29
Chapter 5. Explicit stochastic objects	35
5.1. Linear stochastic object	37
5.2. Power-type nonlinearities	37
5.3. Quadratic stochastic object	44
5.4. Derivative nonlinearities	48
5.5. Proof of Proposition 5.4	59
Chapter 6. Nonlinear estimates	61
Chapter 7. Gauge-covariance	69
7.1. Space-time Besov space estimates	72
7.2. Stochastic estimate	76
7.3. Modified linear object	79
7.3.1. Low $\times$ high estimate	86
7.3.2. High $\times$ high estimates	89
7.3.3. High $\times$ low estimates	92
7.3.4. Proof of Lemma 7.1 and Proposition 7.31	92
7.4. Modified enhanced data set	95
7.5. Contraction mapping argument and the proof of Proposition 7.4	100
Appendix A. A standard reduction	105
Appendix B. Proofs of para-product and Schauder-type estimates	107

Appendix C. Space-time function spaces	113
Appendix D. Proofs of Lemma 2.7, Lemma 2.9, and Lemma 2.10	119
Acknowledgments	121
Bibliography	123
