Differential Galois Groups, Specializations and Matzat's Conjecture

Ruyong Feng
Michael Wibmer

March 2026 • Volume 319 • Number 1622 (second of 6 numbers)

Contents

Chapter 1. Introduction	1
Notation and conventions	6
Chapter 2. $\mathrm{Ad} \times \mathrm{Jac}$ -open sets	7
2.1. Open sets defined by commutative group schemes	7
2.2. Hilbert sets	11
2.3. Néron's specialization theorem	15
2.4. Denseness of $\mathrm{ad} \times \mathrm{Jac}$ -open sets	20
Chapter 3. Some topics in differential Galois theory	23
3.1. Basics of differential Galois theory	23
3.2. Differential torsors	24
3.3. Proto-Picard-Vessiot rings	32
3.4. Logarithmic independence via residues	40
3.5. Exponential bounds for linear differential operators	44
3.6. Linear relations	48
Chapter 4. Specializations	53
4.1. The exponential bound under specialization	54
4.2. Divisors under specialization	55
4.3. Logarithmic independence under specialization	60
4.4. The setup for specializing Picard-Vessiot rings	65
4.5. Algebraic relations under specialization	72
4.6. Picard-Vessiot rings under specialization	74
Chapter 5. Applications of the specialization theorem	79
5.1. Exceptional parameter values	79
5.1.1. Exceptional parameter values for the algebraic relations among the solutions in a family of linear differential equations	79
5.1.2. Families of not solvable algebraic groups	81
5.1.3. Exceptional parameter values for solving in a family of linear differential equations	82
5.2. A short solution of the inverse problem	84
5.3. Proof of Matzat's conjecture	85
Bibliography	89
