
Contents

<i>List of contributors</i>	page vi
<i>Preface</i>	vii
Lectures on anabelian phenomena in geometry and arithmetic <i>Florian Pop</i>	1
On Galois rigidity of fundamental groups of algebraic curves <i>Hiroaki Nakamura</i>	56
Around the Grothendieck anabelian section conjecture <i>Mohamed Saïdi</i>	72
From the classical to the noncommutative Iwasawa theory (for totally real number fields) <i>Mahesh Kakde</i>	107
On the $\mathfrak{M}_H(G)$-conjecture <i>J. Coates and R. Sujatha</i>	132
Galois theory and Diophantine geometry <i>Minhyong Kim</i>	162
Potential modularity – a survey <i>Kevin Buzzard</i>	188
Remarks on some locally \mathbb{Q}_p-analytic representations of $GL_2(F)$ in the crystalline case <i>Christophe Breuil</i>	212
Completed cohomology – a survey <i>Frank Calegari and Matthew Emerton</i>	239
Tensor and homotopy criteria for functional equations of ℓ-adic and classical iterated integrals <i>Hiroaki Nakamura and Zdzisław Wojtkowiak</i>	258
