

CONTENTS

Introduction	ix
Acknowledgement	xii
Chapter 1 Introduction to Singularity Theory with Historical Remarks . . .	1
1. Introduction with naive discussion	1
2. Elementary definitions	3
3. Genericity	12
4. Stability	14
5. Singularities	20
Chapter 2 On Singularities of Mappings from the Plane into the Plane . . .	24
1. Introduction	24
2. Jet spaces	25
3. Transversality	26
4. Morse Lemma - the genericity aspect	31
5. Characterization of folds and cusps	33
6. Whitney's Theorem	43
7. The proof of Theorem 6.1	44
8. The proof of Theorem 6.2	48
Chapter 3 Unfoldings of Mappings	52
1. Introduction	52
2. Germs of mappings	55
3. Finitely determined germs	60
4. Universal unfolding	66
5. Thom's Classification Theorem	85
Chapter 4 Catastrophe Theory	95
1. Introduction	95
2. Naive discussion with illustrative examples	96
3. The elementary catastrophes	100
4. Types of elementary catastrophes	104
Chapter 5 Thom-Whitney Stratification Theory	120
1. Introduction	120
2. Examples	122
3. Regularity conditions of H. Whitney	124
4. Fundamental theorems	132
5. Ratio test	138

CONTENTS

Chapter 6	C^0 -Sufficiency of Jets	142
	1. Introduction	142
	2. Criterion of C^0 - and v-sufficiency of jets in $J^r(n,1)$. .	147
	3. Degree of C^0 -sufficiency	155
	4. Sufficiency of jets in $J^r(n,p)$	161
	Appendix I - Thom's Three Basic Principles	166
	Appendix II - The Proof of Thom's Classification Theorem	181
	Further Reading	192
	Index	197
