

Contents

PREFACE	ix
ACKNOWLEDGMENTS	xi
1. Path Counting—Simple Boundaries	
1. Introduction	1
2. Two-Dimensional Lattice Paths	2
3. Reflection Principle (Conjugation)	2
4. Method of Penetrating Analysis	7
5. Recurrence and Generating Function Method	10
6. Vector Representation, Compositions, and Domination	14
7. Diagonal Steps	19
8. Summary and Concluding Remarks	21
Exercises	24
References	27
2. Path Counting—General Boundaries	
1. Introduction	31
2. Paths within General Boundaries	32
3. Some Generalizations	39
4. Higher Dimensional Paths	44
	vii

5. Types of Diagonal Steps and a Correspondence	52
6. Concluding Remarks	56
Exercises	57
References	60
3. Invariance and Fluctuation	
1. Introduction	63
2. Takács' Urn Problem	64
3. Chung–Feller Theorems	69
4. Sparre Andersen's Equivalence	77
5. Concluding Remarks	80
Exercises	81
References	82
4. Random Walk and Rank Order Statistics	
1. Introduction	85
2. Random Walks	86
3. Rank Order Statistics—Gnedenko's Technique	101
4. Rank Order Statistics—The Dwass Technique	108
5. Concluding Remarks	115
Exercises	120
References	122
5. Discrete Distributions, Queues, Trees, and Search Codes	
1. Introduction	127
2. Discrete Distributions and a Correlated Random Walk	128
3. Queues	139
4. Trees and Search Codes	145
5. Concluding Remarks	157
Exercises	158
References	162
6. Convolution Identities and Inverse Relations	
1. Introduction	165
2. Convolution Identities	166
3. Orthogonal Relations and Inversion Formulas	173
4. Concluding Remarks	177
Exercises	178
References	180
INDEX	183
