<b>PREFACE</b>	iii
<b>1 THE GAUSS AND GAUSS-JORDAN METHODS: ASPECTS OF COMPUTER PROGRAMMING</b>	1
1.1 Introduction	1
1.2 Gauss's Method	3
1.3 Gauss's Method with Row Interchanges	8
1.4 The Gauss-Jordan Method	10
1.5 Arithmetical Cost	11
1.6 Efficient Programming	13
1.7 Computer Representation of Numbers	15
1.8 A Measure of Computational Accuracy	16
1.9 Gauss's Method with Integer Coefficients	17
Exercises	18
References	20
<b>2 MATRIX ANALYSIS OF GAUSS'S METHOD: THE CHOLESKY AND DOOLITTLE DECOMPOSITIONS</b>	23
2.1 Matrix Representation	23
2.2 Matrix Multiplication	26

2.3	Matrix Inversion	27
2.4	Elementary Matrices	30
2.5	Matrix Analysis of Gauss's Method	32
2.6	The Determinant	34
2.7	Doolittle's $L_0U_*$ Decomposition	35
2.8	The $U'_0DU_0$ Decomposition	37
2.9	Cholesky's $U'U$ Decomposition	38
2.10	Horst's Method	40
	Exercises	42
	References	43
<b>3</b>	<b>THE LINEAR ALGEBRAIC MODEL: THE METHOD OF AVERAGES AND THE METHOD OF LEAST SQUARES</b>	<b>45</b>
3.1	The Linear Algebraic Model	45
3.2	The Method of Averages	46
3.3	The Method of Least Squares	49
3.4	Accuracy	50
3.5	Empirical Condition Number	51
3.6	Longley's Test Problem	52
	Exercises	53
	References	54
<b>4</b>	<b>THE CAUCHY-BIENAYMÉ, LAPLACE, AND SCHMIDT PROCEDURES</b>	<b>59</b>
4.1	The Cauchy-Bienaymé Procedure I	59
4.2	The Cauchy-Bienaymé Procedure II	63
4.3	The Laplace Orthogonalization Procedure	66
4.4	The Schmidt Orthogonalization Procedure	68
4.5	Comparison of the Schmidt and Laplace Procedures	69
4.6	Laplace's Procedure with Column Interchanges	71
4.7	Uniqueness of the $U'_0DU_0$ Decomposition	72
4.8	Partial Orthogonalization and Scaling	73
	Exercises	75
	References	76

<b>5</b>	<b>HOUSEHOLDER'S PROCEDURE</b>	<b>81</b>
5.1	Householder's Procedure	81
5.2	Householder's Transformation Matrix	84
5.3	Comparison of the Householder and Laplace Procedures	89
5.4	Further Remarks on Householder's Procedure	90
5.5	Maindonald's Variant of Householder's Procedure	91
5.6	Householder's Procedure with Column Interchanges	93
	Exercises	94
	References	95
<b>6</b>	<b>GIVENS'S PROCEDURE</b>	<b>97</b>
6.1	Givens Transformation Matrix	97
6.2	Givens's Procedure	99
6.3	A Revised Version of Givens's Procedure	101
6.4	Partial Orthogonalization	103
6.5	Square Root Free Variants of Givens's Procedure	106
6.6	Gentleman's Procedure	109
6.7	The Weighted Least Squares Estimator	112
6.8	Deleting Observations	113
6.9	Imposing Constraints	115
6.10	Stirling's Procedure	118
6.11	Generalized Givens Transformations with Integer Coefficients	120
	Exercises	123
	References	126
<b>7</b>	<b>UPDATING THE QU DECOMPOSITION</b>	<b>127</b>
7.1	Adding Rows	127
7.2	Deleting Rows	129
7.3	Adding Columns	131
7.4	Deleting Columns	132
7.5	Permuting Columns	133
7.6	All Possible Regressions	135

7.7	Adding Dummy Rows and Dummy Columns	137
	Exercises	139
	References	140
<b>8</b>	<b>PSEUDO-RANDOM NUMBERS</b>	<b>141</b>
8.1	Data Precision	141
8.2	Multiplicative Congruential Pseudo-Random Number Generators	142
8.3	Uniformly Distributed Pseudo-Random Numbers	145
8.4	Mean and Variance	146
8.5	Normally Distributed Pseudo-Random Numbers	147
	Exercises	148
	Project: A Simulation Study	149
	References	151
<b>9</b>	<b>THE STANDARD LINEAR MODEL</b>	<b>153</b>
9.1	The Linear Statistical Model	153
9.2	The Expectation and Variance of a Random Variable	155
9.3	The Standard Linear Model	156
9.4	The Expectation and Variance of an Estimator	158
9.5	The Expectation and Variance of $\hat{\beta}$	159
9.6	The Least Squares Estimator of $\sigma^2$	161
9.7	The Expected Results of the Simulation Study	162
	Project: A Least Squares Computer Program	164
	References	165
<b>10</b>	<b>CONDITION NUMBERS</b>	<b>167</b>
10.1	Theoretical Condition Numbers	167
10.2	Empirical Condition Numbers	170
10.3	Perturbations of the Full Data Set	170
	Exercises	171
	References	172

<b>11</b>	<b>INSTRUMENTAL VARIABLE ESTIMATORS</b>	<b>173</b>
11.1	The Instrumental Variable Estimator I	173
11.2	A Nonsymmetric Variant of Householder's Procedure	174
11.3	Nonsymmetric Householder Transformation Matrices	177
11.4	The Expectation and Variance of an Instrumental Variable Estimator	179
11.5	The Instrumental Variable Estimator II	180
11.6	Computing Instrumental Variable Estimators by Householder's Procedure	182
	Exercises	183
	References	184
<b>12</b>	<b>GENERALIZED LEAST SQUARES ESTIMATION</b>	<b>185</b>
12.1	Grouped Data	185
12.2	Three Linear Models	188
12.3	The Weighted Least Squares and Generalized Least Squares Estimators	189
12.4	Elementary Computational Procedures	191
12.5	Generalized Least Squares Estimation by Householder Transformations	192
12.6	A Reexamination of Householder's Procedure	195
12.7	The Reverse Cholesky Decomposition	196
12.8	Generalized Least Squares Estimation by Givens Transformations I	198
12.9	Generalized Least Squares Estimation by Givens Transformations II	201
12.10	Updating the Generalized Least Squares Estimates	202
12.11	Special Methods for the Reverse Cholesky Decomposition	206
12.12	Generalizations of the Generalized Least Squares Problem	208
12.13	Estimation in Rank Deficient Models	211
	Exercises	214
	References	216

<b>13</b>	<b>ITERATIVE SOLUTIONS OF LINEAR AND NONLINEAR LEAST SQUARES PROBLEMS</b>	<b>217</b>
13.1	Iterative Refinement of the Generalized Least Squares Estimator	217
13.2	Iterative Refinement of the Ordinary Least Squares Estimator	219
13.3	Iterative Solution of Nonlinear Least Squares Problems	223
	Exercises	226
	References	227
<b>14</b>	<b>CANONICAL EXPRESSIONS FOR THE LEAST SQUARES ESTIMATORS AND TEST STATISTICS</b>	<b>229</b>
14.1	The Canonical Form of the Standard Linear Model	229
14.2	Unbiased Estimators of $\beta$ and $\sigma^2$	231
14.3	The Minimum Variance Unbiased Linear Estimator of $\beta$	232
14.4	A Statistical Test for Deleted Regressors I	234
14.5	Distributional Assumptions	235
14.6	A Statistical Test for Deleted Regressors II	238
14.7	A Statistical Test for Additional Observations	239
	Exercises	240
	Project: A Simulation Study of the Deletion Test	241
	References	242
<b>15</b>	<b>TRADITIONAL EXPRESSIONS FOR THE LEAST SQUARES UPDATING FORMULAS AND TEST STATISTICS</b>	<b>245</b>
15.1	Adding Regressors I	245
15.2	Adding Regressors II	247
15.3	The Inverse of a Partitioned Matrix	251
15.4	Adding Observations I	252
15.5	Adding Observations II	253
15.6	Deleting Observations	256

<b>Contents</b>	<b>xiii</b>
15.7 Imposing Constraints	257
15.8 A Statistical Test for Linear Constraints	259
Exercises	261
References	263
<b>16 LEAST SQUARES ESTIMATION SUBJECT TO LINEAR EQUALITY CONSTRAINTS</b>	<b>265</b>
16.1 Inconsistent Constraints	265
16.2 The General Form of the Constrained Least Squares Estimator	267
16.3 A Particular Form of the Constrained Least Squares Estimator	268
16.4 The Constrained Minimum Variance Unbiased Linear Estimator of $\beta$	269
16.5 Traditional Expressions for the Constrained Least Squares Estimator	271
16.6 The Distribution of the Test for Linear Constraints	272
Exercises	273
References	274
<b>SUPPLEMENTARY READING</b>	<b>275</b>
<b>GLOSSARY OF MATRIX ALGEBRA</b>	<b>277</b>
<b>AUTHOR INDEX</b>	<b>283</b>
<b>SUBJECT INDEX</b>	<b>287</b>
