

# *Table of Contents*

<b>Chapter 1. Elements of Probability</b>	<b>1</b>
1. Introduction	1
2. Fundamental Concept	1
2.1. Components of a probability	1
2.2. Definition of probability	2
2.3. Illustrative examples	2
2.4. Values of a probability	3
2.5. Sure event and impossible event	3
2.6. Complement (or negation) of an event	3
3. Two or More Events—Multiplication Theorem	4
3.1. Composite event (A and B)	5
3.2. Conditional probability	5
3.3. Independence	6
3.4. Multiplication theorem	7
3.5. Multiplication theorem when events are independent	8
3.6. Multiplication theorem concerning a sure event or an impossible event	8
3.7. A theorem of (pairwise) independence	8
4. Two or More Events—Addition Theorem	9
4.1. Composite event (A or B)	9
4.2. Mutual exclusion	9
4.3. Addition theorem	9
4.4. Addition theorem when events are mutually exclusive	11

5.	Remarks on Addition and Multiplication Theorems	11
5.1.	Summary of the addition and multiplication theorems	11
5.2.	The distributive law	12
5.3.	Product of complements vs. complement of product	12
6.	Misuses of Probability—Some Examples	13
6.1.	Order of events in a conditional probability	13
6.2.	Prospective study vs. retrospective study	15
6.3.	Relative risk and odds ratio	16
6.4.	Probability of A given B vs. probability of B given A	17
7.	An Example from Life Table	19
7.1.	Conditional probability	21
7.2.	Probability of composite events involving two or more people	22
7.3.	Probability of dissolution of marriage	23
7.4.	A mortality table of French insurance companies	25
8.	Problems for Solution	25
<b>Chapter 2. Basic Concepts of Statistics</b>		<b>29</b>
1.	Introduction	29
2.	Random Variable	30
2.1.	Expectation (mean, expected value) of a random variable	32
2.1.1.	Expectations of sample proportion and of sample mean	33
2.2.	Variance and standard deviation of a random variable	34
2.2.1.	Variances of sample proportion and of sample mean	37
3.	The Binomial Distribution	39
3.1.	The probability distribution	40
3.2.	The binomial probability $p$ (or $q$ )	41
4.	Problems for Solution	43
<b>Chapter 3. The Normal Distribution and Statistical Inference</b>		<b>45</b>
1.	The Normal Distribution	45
1.1.	The central limit theorem	49
2.	Statistical Inference—Interval Estimation	52

2.1.	Interval estimation—confidence interval	52
3.	Statistical Inference—Hypothesis Testing	55
3.1.	Testing hypotheses of two proportions (probabilities)	55
3.1.1.	Summary	59
3.2.	Testing hypotheses of population proportions and of population means—A summary	59
4.	The Chi-Square Test	61
5.	Problems for Solution	66
<b>Chapter 4.</b>	<b>Age-specific Death Rate and Other Measures of Mortality</b>	<b>71</b>
1.	Introduction	71
2.	Age-Specific Death Rate	72
2.1.	Other specific death rates	77
3.	Standard Error of the Age-Specific Death Rate	78
3.1.	Age specific death rates determined from a sample of deaths	80
4.	Infant Mortality and Maternal Mortality	82
5.	Problems for Solution	86
<b>Chapter 5.</b>	<b>Adjustment of Rates</b>	<b>91</b>
1.	Introduction	91
2.	Adjusted Rates	93
2.1.	The crude death rate (C.D.R.)	93
2.2.	Direct method death rate (D.M.D.R.)	95
2.3.	Comparative mortality rate (C.M.R.)	96
2.4.	Indirect method death rate (I.M.D.R.)	97
2.5.	Standardized mortality ratio (S.M.R.)	99
2.6.	Life table death rate (L.T.D.R.)	100
2.7.	Equivalent average death rate (E.A.D.R.)	101
2.8.	Relative mortality index (R.M.I.)	101
2.9.	Mortality index (M.I.)	102
3.	Standard Error of the Adjusted Rates	103
3.1.	A general formula for the variance of an adjusted rate	105
4.	Computation of the Sample Variance of the Direct Method Age-Adjusted Death Rate	106
5.	Sample Variance of the Life Table Death Rate	108
6.	Problems for Solution	109

<b>Chapter 6. The Life Table and Its Construction—The Complete Life Table</b>	<b>113</b>
An Historical Note	113
1. Introduction	114
2. Description of the Life Table	115
3. Construction of the Complete Current Life Table	118
4. Problems for Solution	134
<b>Chapter 7. The Life Table and its Construction—The Abridged Life Table</b>	<b>137</b>
1. Introduction	137
2. A Method of Life Table Construction	138
3. An Abridged Life Table	140
4. The Fraction of the Last Age Interval of Life, $a_i$	142
4.1. Computation of $a_0$	143
4.2. Computation of $a_1$ for age interval (1, 5)	144
5. Significant Contributions to the Construction of Abridged Life Tables	147
5.1. King's method	148
5.2. Reed–Merrell's method	148
5.3. Greville's method	148
5.4. Weisler's method	149
5.5. Sirken's method	149
5.6. Keyfitz's method	150
5.7. United Nations' and Brass' model life table systems and Coale–Demeny's regional life tables	150
6. Problems for Solution	151
<b>Chapter 8. Statistical Inference Regarding Life Table Functions</b>	<b>153</b>
1. Introduction	153
2. The Probability of Death, $q_i$ , and the Probability of Survival, $p_i$	153
3. The Survival Probability, $p_{ij}$	156
4. The Expectation of Life at Age $x_\alpha$ , $e_\alpha$	161
4.1. Computation of the variance of the expectation of life in a current life table	163
4.2. Statistical inference about the expectation of life	164

5.	Life Table Based on a Sample of Deaths	165
6.	Problems for Solution	166
<b>Chapter 9.</b>	<b>The Cohort Life Table and Some Applications</b>	<b>169</b>
1.	Introduction	169
2.	Elements of the Life Table	170
2.1.	The observed expectation of life and the sample mean future life time	170
3.	Sample Variance of the Life Table Functions	172
4.	A Life Table for <i>Drosophila Melanogaster</i>	174
5.	An Antenatal Life Table	176
6.	Life Tables in Ecological Studies	180
7.	The Family Life Cycle	182
7.1.	Probabilities of survival and dissolution of marriage	183
7.2.	Duration of marriage	185
7.3.	Duration of widowhood	187
7.4.	Duration of the family life cycle	189
8.	Problems for Solution	191
<b>Chapter 10.</b>	<b>Statistical Theory of the Life Table</b>	<b>193</b>
1.	Introduction	193
2.	Probability Distribution of the Number of Survivors at Age $x$ , $l_x$	195
2.1.	Mortality laws	198
3.	Joint Probability Distribution of the Numbers of Survivors	199
3.1.	An urn scheme	201
4.	Joint Probability Distribution of the Numbers of Deaths	203
5.	Optimality Properties of $\hat{p}_j$ and $\hat{q}_j$	204
5.1.	Maximum likelihood estimators of $p_j$	204
5.2.	Cramér–Rao lower bound for the variance of an unbiased estimator of $p_j$	207
5.3.	Sufficiency and efficiency of $\hat{p}_j$	209
6.	Distribution of the Observed Expectation of Life at Age $x_\alpha$ , $\hat{e}_\alpha$	211

7.	Maximum Likelihood Estimation—An Appendix	214
7.1	Optimality properties of an estimator	217
8.	Problems for Solution	218
<b>Chapter 11. Medical Follow-up Studies</b>		<b>221</b>
1.	Introduction	221
2.	Estimation of the Probability of Survival for Interval ( $x, x + 1$ ), $p_x$	222
2.1.	Basic random variables and likelihood functions	223
2.2.	Formulas for the estimators, $p_x$	224
2.2.1.	The actuarial method	224
2.2.2.	Estimator A	225
2.2.3.	Estimator B	226
2.2.4.	Elvebeck's estimator	227
2.2.5.	Drolette's estimator	227
2.2.6.	Kaplan–Meier's estimator	228
2.2.7.	Estimator C	229
2.3.	A summary of the estimators	230
2.4.	Consistency of the estimators	232
3.	Estimation of the Survival Probability, $p_{ij}$	233
4.	Estimation of the Expectation of Life, $e_x$	233
4.1.	Sample variance of the observed expectation of life	235
5.	An Example of Life Table Construction for a Follow-up Population	236
6.	Problems for Solution	241
<b>Chapter 12. A New Life Table—for Survival and Stages of Disease</b>		<b>245</b>
1.	Introduction	245
2.	Description of the Life Table	246
3.	Biometric Functions of the Life Table	249
3.1.	Probability of advancement from stage $i$ to stage $i + 1$ , $p_i$	250
3.2.	Probability of dying in stage $i$ , $q_i$	250
3.3.	Waiting time in stage $i$ , $\tau_i$	251
3.4.	Life time in stage $i$ , $t_i$	251
3.5.	Life time beyond $x_i$ , $Y_i$	252
3.6.	Expectation of life at $x_i$ , $\hat{e}_i$	254

4.	Probability Distribution of Life Table Functions	256
4.1.	Joint distribution of $l_2, \dots, l_s$	256
4.2.	Probability distribution of $d_1, \dots, d_s$	256
4.3.	Expectations and variance of $L_i$ and $T_i$	257
4.4.	Expectation and variance of $\hat{e}_i$	257
5.	Life Tables for Subpopulations and Their Relationship with the Life Table for the Entire Population	258
6.	A Fertility Table for Studies of Human Reproduction	259
6.1.	Maximum-likelihood estimation of the elements of the fertility table	260
6.2.	Description of the fertility table	264
6.3.	Computation of parity progression ratio for a current population	268
6.4.	Summary and discussion	269
7.	Problems for Solution	272
<b>Appendix I.</b>	<b>Fraction of Last Age Interval of Life <math>a_i</math> for Selected Countries</b>	<b>275</b>
<b>Appendix II-1.</b>	<b>Computer Program for Construction of Complete Life Tables</b>	<b>289</b>
<b>Appendix II-2.</b>	<b>Computer Program for Construction of Abridged Life Tables</b>	<b>295</b>
