

CONTENTS

§ 1	INTRODUCTION, EXAMPLES, SURVEY	
1.1	Optimization problems in elementary geometry	1
1.2	Calculus of variations	10
1.3	Approximation problems	14
1.4	Linear programming	19
1.5	Optimal Control	24
1.6	Survey	27
1.7	Literature	28
§ 2	LINEAR PROGRAMMING	
2.1	Definition and interpretation of the dual program	30
2.2	The FARKAS-Lemma and the Theorem of CARATHEODORY	37
2.3	The strong duality theorem of linear programming	44
2.4	An application: relation between inradius and width of a polyhedron	50
2.5	Literature	55
§ 3	CONVEXITY IN LINEAR AND NORMED LINEAR SPACES	
3.1	Separating convex sets in linear spaces	56
3.2	Separation of convex sets in normed linear spaces	67
3.3	Convex functions	73
3.4	Literature	84
§ 4	CONVEX OPTIMIZATION PROBLEMS	
4.1	Examples of convex optimization problems	85
4.2	Definition and motivation of the dual program. The weak duality theorem	90
4.3	Strong duality, KUHN-TUCKER saddle point theorem	100
4.4	Quadratic programming	126
4.5	Literature	140

§ 5	NECESSARY OPTIMALITY CONDITIONS	
5.1	GATEAUX and FRECHET Differential	142
5.2	The Theorem of LYUSTERNIK	150
5.3	LAGRANGE multipliers. Theorems of KUHN-TUCKER and F. JOHN type	164
5.4	Necessary optimality conditions of first order in the calculus of variations and in optimal control theory	177
5.5	Necessary and sufficient optimality conditions of second order	196
5.6	Literature	206
§ 6	EXISTENCE THEOREMS FOR SOLUTIONS OF OPTIMIZATION PROBLEMS	
6.1	Functional analytic existence theorems	208
6.2	Existence of optimal controls	217
6.3	Literature	223
	BIBLIOGRAPHY	225
	SYMBOL INDEX	229
	SUBJECT INDEX	230
