

Contents

Preface	iii
1 The Basics: Unconstrained Optimisation	1
1.1 Introduction	1
1.2 Stationary Points for Functions of One Variable	3
1.3 Applications	10
1.4 Stationary Points for Functions of Two Variables	12
1.5 Applications	17
1.6 Contour Maps: An Introduction	20
1.7 Exotic Contours	23
Problem Set 1	27
References	28
2 Optimisation with Equality Constraints	30
2.1 Introduction	30
2.2 Constrained Stationary Points	31
2.3 The Lagrange Multiplier Method	33
2.4 Singularities	37
2.5 Other Aspects of the Lagrange Method	38
2.6 Generalisation of the Lagrange Method	41
2.7 Applications	47
Problem Set 2	50
References	52
3 Inequality Constraints	54
3.1 Introduction	54
3.2 The One-Variable Case	55
3.3 The Two-Variable Case: A Single Inequality Constraint	59
3.4 The Two-Variable Case: Several Inequality Constraints	62
3.5 The Sign of the Lagrange Multiplier	66
3.6 The Complementary Slackness Conditions	69
3.7 An Application: The Coal Transportation Problem	72
3.8 The Kuhn–Tucker Conditions	74
Problem Set 3	76
References	77
4 Duality	79
4.1 Introduction	79
4.2 Some Simple Examples	81
4.3 Higher Dimensional Examples	87
4.4 The Dual Linear Program	90

4.5	Convexity and Concavity	94
4.6	The Primal–Dual Structure	100
4.7	Geometric Programming: An Application of Duality Theory	103
4.8	The Geometric Program with Constraints	108
	Problem Set 4	110
	References	112
5	Linear Programming	114
5.1	Introduction	114
5.2	Slack Variables	116
5.3	The Kuhn–Tucker Conditions	118
5.4	Development of the Algorithm	120
5.5	Streamlining the Algorithm	121
5.6	The Simplex Tabular Algorithm	123
5.7	Applying the Simplex Tabular Algorithm	127
5.8	Sensitivity Analysis	133
5.9	Applications	135
	Problem Set 5	140
	References	141
6	Optimal Control Theory: The Basics	142
6.1	Introduction	142
6.2	Optimal Control Theory: The Discrete Case	144
6.3	The Pioneer Problem	150
6.4	Continuous Optimal Control Theory	153
6.5	An Exhaustible Resource Problem	160
6.6	Phase Space	162
6.7	Ramsey’s Growth Model	171
	Problem Set 6	173
	References	176
7	Optimal Control: Generalisations	177
7.1	Introduction	177
7.2	Bounds on the Control Variable	177
7.3	An Application in Renewable Resource Theory	182
7.4	Terminal Conditions	186
7.5	Further Generalisations	192
7.6	Further Applications	199
7.7	The Calculus of Variations	202
	Problem Set 7	208
	References	211
8	Postscript	213
8.1	Introduction	213
8.2	Finite State Systems	214
8.3	Dynamic Programming	220
8.4	Stochastic Programming	224
8.5	The Theory in Perspective	225
	References	227

Appendix	229
A Linear Simultaneous Equations	229
B Summation Notation	231
C Matrices	232
D Limits of Functions	234
E Geometric Vectors	237
F Conic Sections	240
G Differential Equations	242
H Hyperbolic Functions	244
I Some Classical Problems	246
J The Chain Rule and the Variational Principle	249
Solutions	256
Chapter 1	256
Chapter 2	261
Chapter 3	264
Chapter 4	270
Chapter 5	274
Chapter 6	281
Chapter 7	285
Index	291
