<b>Preface</b>	<i>page</i>	ix
<b>1. Introduction</b>		1
1.1. Sequential experiments		1
1.2. Sampling inspection		4
1.3. Properties of the curtailed inspection plan		7
1.4. Loss and risk functions		11
Problems		12
<b>2. The sequential probability ratio test</b>		14
2.1. Origin of the SPRT		14
2.2. Derivation of the SPRT		14
2.3. Some important properties of the SPRT		17
2.4. Some applications of the SPRT		24
Problems		29
<b>3. Sequential tests between three hypotheses</b>		32
3.1. Two examples		32
3.2. Formulation of the test		33
3.3. Properties of Sobel and Wald's Test		36
3.4. Armitage's method		37
3.5. Billard and Vagholkar's Test		40
3.6. Some special methods of treating three hypotheses		43
3.7. Application of the methods		44
Problems		45
<b>4. Extensions to the SPRT</b>		46
4.1. The problem of composite hypotheses		46
4.2. Wald's theory of weight functions		47
4.3. Some applications of Wald's theory of weight functions		49
4.4. Transformation of observations		53
4.5. Cox's theorem		54
4.6. Discussion		58
4.7. Asymptotic tests		59
Problems		62

## CONTENTS

<b>5. Some applications of Cox's theorem</b>	<i>page</i> 65
5.1. The sequential $t$ -test	65
5.2. Two-sided tests	66
5.3. Closed forms of the tests	69
5.4. Use of the tests	70
5.5. A sequential test of randomness	71
5.6. Sequential analysis of variance	76
5.7. Sequential $\chi^2$ and $T^2$	78
Problems	79
<b>6. Some methods leading to closed boundaries</b>	81
6.1. Review of Chapters 1–5	81
6.2. Armitage's 'restricted' procedures	81
6.3. Approximate solution by diffusion theory	83
6.4. Application to tests for binomial probability	84
6.5. Contraction of the middle boundary	85
6.6. Boundaries to minimize the maximum expected sample size	87
6.7. Discussion of Armitage's methods	87
Problems	90
<b>7. Decision theory</b>	92
7.1. Assumptions	92
7.2. Bayesian approach	97
7.3. Sequential sampling	100
7.4. The meeting point	102
7.5. Three terminal decisions	108
7.6. Empirical Bayes solutions	109
7.7. The minimax criterion	111
7.8. Discussion	114
Problems	115
<b>8. Sequential estimation</b>	118
8.1. Estimation versus hypothesis testing	118
8.2. Estimation	121
8.3. Inverse binomial sampling	125
8.4. Estimation of a normal mean	131
8.5. Discussion of § 8.2 to § 8.4	136
8.6. Some theoretical results	136

## CONTENTS

8.7. Asymptotic boundary theory	<i>page</i> 138
8.8. Lower bound to the variance of sequential estimates	140
8.9. Bayesian decision theory approach to sequential estimation	141
8.10. Discussion	148
8.11. Sequential interval estimation	148
Problems	151
<b>9. Sequential estimation of points on regression functions</b>	<b>153</b>
9.1. Introduction	153
9.2. The Robbins–Monro process	154
9.3. Dvoretzky’s theorem	159
9.4. Practical use of the Robbins–Monro process	161
9.5. The Kiefer–Wolfowitz procedure	163
9.6. Methods for seeking the maximum of a response surface	166
Problems	169
<b>10. Sequential estimation of points on quantal response curves</b>	<b>171</b>
10.1. Introduction	171
10.2. The Robbins–Monro process	172
10.3. The Up-and-Down rule	175
10.4. Modifications to the Up-and-Down rule	179
10.5. Finite Markov chain approximation	181
10.6. Wetherill’s UDTR rule	183
Problems	188
<b>11. Double sampling</b>	<b>189</b>
11.1. Double sampling (sampling inspection)	189
11.2. Estimation by double sampling	191
11.3. Choice of the second sample size in double sampling	196
11.4. Stein’s double sampling plan	198
Problems	199
<b>12. Selection procedures</b>	<b>202</b>
12.1. Plant selection	202
12.2. Screening for drugs	205
12.3. Selection of the largest of $k$ normal means	207
Problems	211

CONTENTS

<b>Appendix</b>	The normal diffusion process	<i>page</i>	213
<b>References</b>	I General		215
	II Applications		225
