

# Contents

1	<i>Introduction</i>	1
1.1	Measurement in Economics	
1.2	Role of Statistics in Economics	
1.3	Plan of the Book	
2	<i>Graphical Representation of Data</i>	6
2.1	Elements of Curve Tracing	
2.2	Alternative Graphs used for Representing Statistical Data Problems	
3	<i>Classification and Presentation of Statistical Data</i>	30
3.1	Statistical Population	
3.2	Variable	
3.3	Frequency Distribution	
3.4	Choice of Class Intervals	
3.5	Diagrammatic Representation of Frequency Distribution	
3.6	Cumulative Frequency Distribution and Cumulative Frequency Graph	
3.7	Diagrammatic Representation of a Frequency Distribution with Unequal Class Intervals Problems	
4	<i>Measures of Central Tendency</i>	56
4.1	Arithmetic Mean (A.M.)—Ungrouped Data	
4.2	Median—Ungrouped Data	
4.3	Comparison of Arithmetic Mean and Median	
4.4	Mode—Ungrouped Data	
4.5	Geometric Mean (G.M.)—Ungrouped Data	
4.6	Harmonic Mean (H.M.)—Ungrouped Data	
4.7	Computation of Averages from Grouped Data	
4.8	Computation of A.M. from Grouped Data	
4.9	Computation of Median from Grouped Data	
4.10	Graphical Determination of Median	
4.11	Computation of Mode from Grouped Data	
4.12	Computation of Geometric Mean from Grouped Data	

4.13	Computation of Harmonic Mean from Grouped Data	
4.14	Summary and Conclusion	
4.15	Averages from Combined Data Problems	
5	<i>Measures of Dispersion</i>	85
5.1	Range	
5.2	Standard Deviation	
5.3	Mean Deviation	
5.4	Quartile Deviation (Q.D.)	
5.5	Computation of Standard Deviation from Grouped Data	
5.6	Coefficient of Variation Problems	
6	<i>Measures of Skewness and Kurtosis</i>	98
6.1	Definition of Moments	
6.2	Relationship Between Central and Non-central Moments	
6.3	Skewness	
6.4	Kurtosis Problems	
7	<i>Correlation and Regression</i>	110
7.1	Introduction	
7.2	Bivariate Frequency Distribution	
7.3	Diagrammatic Representation	
7.4	Association Between Variables	
7.5	Analysis of Regression	
7.6	Computation of Correlation and Regression Lines Problems	
8	<i>Probability and Probability Distributions</i>	154
8.1	Introduction	
8.2	Meaning of Probability	
8.3	Probability Rules	
8.4	Calculus of Mathematical Expectations	
8.5	Some Theoretical Probability Distributions Problems	

9	<i>Sampling and Sampling Distribution</i>	185
9.1	Method of Complete Enumeration or Complete Census	
9.2	Sampling Method	
9.3	Sampling Technique	
9.4	Sampling Distribution of an Estimator	
9.5	Point Estimation	
9.6	Interval Estimation	
9.7	Tests of Significance Problems	
10	<i>Small Sample Tests of Significance</i>	220
10.1	Some Preliminary Concepts	
10.2	Chi Square Distribution	
10.3	Student's t Distribution	
10.4	F Distribution Problems	
11	<i>Elements of Multivariate Regression</i>	259
11.1	Linear Regression with Two Explanatory Variables	
11.2	Least Squares Estimation	
11.3	Estimate of the Error	
11.4	Multiple Correlation	
11.5	Partial Correlation Problems	
12	<i>Index Numbers</i>	282
12.1	Nature and Purpose of an Index Number	
12.2	Commonly used Index Numbers	
12.3	Chain Base Index Number	
12.4	Official Index Number	
12.5	True Cost of Living Index	
12.6	Fisher's Test for Index Numbers Problems	
13	<i>Time Series Analysis</i>	312
13.1	Nature and Decomposition of a Time Series	
13.2	Analysis of Trend: Polynomial Trend	
13.3	Analysis of Trend: Nonlinear Growth Curves	
13.4	Moving Average Method	
13.5	Seasonal Component	
13.6	Cyclical and Random Components	

13.7	Forecasts and its Accuracy Problems	
14	<i>Measurement of Economic Inequality</i>	362
14.1	Nature of the Distribution of Income and Wealth	
14.2	Graduating Income Distribution	
14.3	Lorenz Curve Representation of Distribution of Income	
14.4	Measures of Inequality	
14.5	Gini Coefficient and Lorenz Curve Problems	
	<i>Answers</i>	394
	<i>Miscellaneous Problems</i>	406
	<i>Appendix</i>	425
