

# Contents

<b>Preface</b>	<b>xiii</b>
<b>1. The Processes of Science</b>	<b>1</b>
1.1 Introduction, 1	
1.2 Development of Theory, 5	
1.3 The Nature and Role of Theory in Science, 9	
1.4 Varieties of Theory, 12	
1.5 The Problem of General Science, 16	
1.6 Causality, 19	
1.7 The Upshot, 23	
1.8 What Is an Experiment? 23	
1.9 Statistical Inference, 26	
<b>2. Principles of Experimental Design</b>	<b>30</b>
2.1 Confirmatory and Exploratory Experiments, 30	
2.2 Steps of Designed Investigations, 31	
2.3 The Linear Model, 36	
2.4 Illustrating Individual Steps: Example 1, 37	
2.5 Three Principles of Experimental Design, 41	
2.6 The Statistical Triangle and Example 2, 42	
2.7 General Principle of Inference and Types of Statistical Analyses, 47	
2.8 Other Considerations for Experimental Designs, 50	
<b>3. Survey of Experimental Designs: A Preview</b>	<b>53</b>
3.1 Introduction, 53	
3.2 Error-Control Designs, 54	

3.3	Treatment Designs, 56	
3.4	Combining Ideas from Error-Control and Treatment Designs, 56	
3.5	Sampling Designs, 58	
3.6	Summary, 59	
<b>4.</b>	<b>Linear Model Theory</b>	<b>60</b>
4.1	Introduction, 60	
4.2	Representation of Linear Models, 62	
4.3	Functional and Classificatory Linear Models, 63	
4.4	The Fitting of $y \doteq X\beta$ , 65	
4.5	The Moore-Penrose Generalized Inverse, 75	
4.6	The Conditioned Linear Model, 76	
4.7	The Two-Part Linear Model, 80	
4.8	A Special Case of a Partitioned Model, 85	
4.9	Three-Part Models, 86	
4.10	The Two-Way Classification without Interaction, 87	
4.11	The $K$ -Part Linear Model, 88	
4.12	Balanced Classificatory Structures and Analysis of Variance, 93	
4.13	Unbalanced Data Structures, 104	
4.14	Analysis of Covariance Model, 110	
4.15	From Data Analysis to Statistical Inference, 115	
4.16	The Simple Normal Stochastic Linear Model, 116	
4.17	Distribution Theory with GMNLM, 121	
	Exercises, 126	
<b>5.</b>	<b>Randomization</b>	<b>128</b>
5.1	Introduction, 128	
5.2	The Tea Tasting Lady, 130	
5.3	A Triangular Experiment, 132	
5.4	The Simple Arithmetical Experiment, 134	
5.5	Randomization Ideas for Intervention Experiments, 140	
5.6	The General Idea of Experiment Randomization Test, 142	
5.7	Introduction to Subsequent Chapters, 143	
<b>6.</b>	<b>The Completely Randomized Design</b>	<b>145</b>
6.1	Introduction and Definition, 145	
6.2	The Randomization Process, 146	
6.3	The Derived Linear Model, 148	

6.4	Analysis of Variance, 156	
6.5	Statistical Tests, 161	
6.6	Approximating the Randomization Test, 164	
6.7	CRD with Unequal Numbers of Replications, 170	
6.8	Number of Replications, 174	
6.9	Subsampling in a CRD, 182	
6.10	Transformations, 187	
6.11	Computer Packages, 191	
	Exercises, 192	
<b>7.</b>	<b>Comparisons of Treatments</b>	<b>197</b>
7.1	Introduction, 197	
7.2	Preplanned Comparisons for Qualitative Treatments, 197	
7.3	Orthogonality and Orthogonal Comparisons, 202	
7.4	Comparisons for Quantitative Treatments, 203	
7.5	Multiple Comparison Procedures, 208	
7.6	Grouping Treatments, 213	
7.7	Computer Packages, 216	
	Exercises, 216	
<b>8.</b>	<b>Use of Supplementary Information</b>	<b>219</b>
8.1	Introduction, 219	
8.2	Motivation of the Procedure, 220	
8.3	Analysis of Covariance Procedure, 222	
8.4	Treatment Comparisons, 229	
8.5	Violation of Assumptions, 233	
8.6	Analysis of Covariance with Subsampling, 239	
8.7	The Case of Several Covariates, 241	
8.8	Computer Programs, 246	
	Exercises, 247	
<b>9.</b>	<b>Randomized Block Designs</b>	<b>250</b>
9.1	Introduction, 250	
9.2	Randomized Complete Block Design, 251	
9.3	Relative Efficiency of the Randomized Complete Block Design, 260	
9.4	Supplementary Information and Analysis of Covariance, 262	

9.5	Missing Observations, 265	
9.6	Nonadditivity in the RCBD, 271	
9.7	The Generalized Randomized Block Design, 279	
9.8	Incomplete Block Designs, 290	
9.9	Systematic Block Designs, 302	
9.10	Computer Packages, 305	
	Exercises, 306	
<b>10.</b>	<b>Latin Square Type Designs</b>	<b>315</b>
10.1	Introduction and Motivation, 315	
10.2	Latin Square Design, 317	
10.3	Replicated Latin Squares, 332	
10.4	Latin Rectangles, 335	
10.5	Incomplete Latin Squares, 336	
10.6	Orthogonal Latin Squares, 337	
10.7	Change-Over Designs, 339	
10.8	Computer Packages, 344	
	Exercises, 344	
<b>11.</b>	<b>Factorial Experiments: Basic Ideas</b>	<b>349</b>
11.1	Introduction, 349	
11.2	Inferences from Factorial Experiment, 350	
11.3	Experiments with Factors at Two Levels, 352	
11.4	The Interpretation of Effects and Interactions, 357	
11.5	$2^n$ Factorials in Incomplete Blocks, 359	
11.6	Fractions of $2^n$ Factorials, 365	
11.7	Orthogonal Main Effect Plans for $2^n$ Factorials, 374	
11.8	Experiments with Factors at Three Levels, 377	
11.9	Experiments with Factors at Two and Three Levels, 390	
11.10	Computer Packages, 394	
	Exercises, 396	
<b>12.</b>	<b>Response Surface Designs</b>	<b>401</b>
12.1	Introduction, 401	
12.2	Formulation of the Problem, 402	
12.3	First-Order Models and Designs, 404	
12.4	Second-Order Models and Designs, 409	
12.5	Integrated Mean Squared Error Designs, 416	
12.6	Searching for an Optimum, 420	

12.7	Experiments with Mixtures, 421	
12.8	Computer Packages, 426	
	Exercises, 427	
<b>13.</b>	<b>Split-Plot Type Designs</b>	<b>428</b>
13.1	Introduction, 428	
13.2	The Simple Split-Plot Design, 429	
13.3	Relative Efficiency of the Split-Plot Design, 438	
13.4	Other Forms of Split-Plot Designs, 439	
13.5	Split-Block Design, 448	
13.6	The Split-Split-Plot Design, 453	
13.7	Repeated Measures Designs, 455	
13.8	Computer Packages, 460	
	Exercises, 462
