Foreword	v
Preface	vii
Acknowledgments	xi
Guide to Readers	xxiii
List of Abbreviations	xxvii

Chapter 1. Basic Concepts of Sampling 1

Introduction - Complete enumeration or sample - Advantages of sampling - Limitations of sampling - Relationship between a complete enumeration and a sample - Probability versus purposive samples - Terms and definitions - Sampling frames - Types of probability sampling - Universe parameters - Sample estimators - Criteria of estimators - Mean square error - Principal steps in a sample survey - Symbols and notations - Further reading - Exercises

Part I: Single-stage Sampling

Chapter 2. Simple Random Sampling 29

Introduction - Characteristics of the universe - Simple random sampling - Sampling without replacement - Sampling with replacement - Important results - Fundamental theorems - Standard errors of estimators and setting of confidence limits - Estimation of totals, means, ratios and their variances - Use of random sample numbers - Examples - Estimation for sub-universes - Estimation of proportion of units - Method of random groups for estimating variances and covariances - Further reading - Exercises

Chapter 3. Ratio and Regression Estimators	71
Introduction - Ratio method of estimation - Regression method of estimation - Further reading - Exercises	
Chapter 4. Systematic Sampling	81
Introduction - Linear and circular systematic sampling - Sample mean and variance - Estimation of variance - Further reading - Exercise	
Chapter 5. Varying Probability Sampling: Sampling with Probability Proportional to Size	91
Introduction - Selection of one unit with probability proportional to size - Estimating procedures - Procedures for the selection of sample units with pps - Special cases of crop surveys - Ratio method of estimation - Further reading - Exercises	
Chapter 6. Choice of Sampling Units: Cluster Sampling	115
Introduction - Simple random sampling - Discussion of the results - Notes - Further reading - Exercises	
Chapter 7. Size of Sample: Cost and Error	125
Introduction - Simple random sampling - Estimation of variance - Cost considerations - Balance of cost and error - Cluster sampling - General remarks - Further reading - Exercises	
Chapter 8. Self-weighting Designs	141
Introduction - Simple random sampling - Varying probability sampling - Rounding off of multipliers	
Part II: Stratified Single-stage Sampling	
Chapter 9. Stratified Sampling: Introduction	147
Introduction - Reasons for stratification - Fundamental theorems in stratified sampling - Setting of confidence limits - Selection of two units from each stratum - Further reading	

Chapter 10. Stratified Simple Random Sampling **157**

Introduction - Estimation of totals, means, ratios and their variances - Estimation of proportion of units - Ratio method of estimation: Combined and separate ratio estimators - Ratio of ratio estimators of totals of two study variables - Gain due to stratification - Stratification after sampling - Further reading - Exercises

Chapter 11. Stratified Varying Probability Sampling **189**

Introduction - Estimation of totals, means, ratios and their variances - Different schemes of selection in different strata - Special cases of crop surveys - Ratio method of estimation: Combined and separate ratio estimators - Ratio of ratio estimators of totals of two study variables - Gain due to stratification - Further reading - Exercise

Chapter 12. Size of Sample and Allocation to Different Strata **207**

Introduction - Principles of stratification - Allocation of sample size to different strata - Formation of strata - Multiple stratification - Determination of the total sample size - Examples - Further reading - Exercises

Chapter 13. Self-weighting Designs in Stratified Single-stage Sampling **223**

Introduction - Stratified simple random sampling - Stratified varying probability sampling - Fractional values of n_h - Self-weighting designs at the tabulation stage - Further reading

Part III: Multi-stage Sampling

Chapter 14. Multi-stage Sampling: Introduction **229**

Introduction - Reasons for multi-stage sampling - Structure of a multi-stage design - Fundamental theorems in multi-stage sampling - Setting of confidence limits - Further reading

Chapter 15. Multi-stage Simple Random Sampling 237

Introduction - Two-stage srs: Estimation of totals, means, ratios, and their variances - Two-stage srs: Estimation for sub-universes - Two-stage srs: Estimation of proportion of units - Two-stage srs: Ratio method of estimation - Three-stage srs: Estimation of totals, means, ratios and their variances - Three-stage srs: Estimation for sub-universes - Three-stage srs: Estimation of proportion of units - Three-stage srs: Ratio method of estimation - Further reading - Exercises

Chapter 16. Multi-stage Varying Probability Sampling 271

Introduction - General estimating equations: Two- and three-stage pps designs - Two-stage design with pps and srs - Three-stage design with pps, srs, and srs - Special cases of crop surveys - Further reading - Exercises

Chapter 17. Size of Sample and Allocation to Different Stages 289

Introduction - Two-stage design - Three-stage design - Further reading - Exercises

Chapter 18. Self-weighting Designs in Multi-stage Sampling 301

Introduction - General case - Two-stage sample design with pps and srs - Opinion and marketing research - Further reading

Part IV: Stratified Multi-stage Sampling

Chapter 19. Stratified Multi-stage Sampling: Introduction 309

Introduction - Reasons for stratified multi-stage sampling - Fundamental theorems in stratified multi-stage sampling - Further reading

Chapter 20. Stratified Multi-stage Simple Random Sampling 317

Introduction - Stratified two-stage srs: Estimation of totals, means, ratios and their variances - Stratified three-stage srs - Miscellaneous notes - Further reading - Exercises

Chapter 21. Stratified Multi-stage Varying Probability Sampling 355

Introduction - Stratified two- and three-stage pps designs - Stratified two-stage design with pps and srs - Stratified three-stage design with pps, srs, and srs - Special cases of crop surveys - Further reading - Exercises

Chapter 22. Size of Sample and Allocation to Different Strata and Stages 379

Introduction - Optimum allocations - Gain due to stratification - Further reading

Chapter 23. Self-weighting Designs in Stratified Multi-stage Sampling 381

Introduction - General case - Stratified two-stage design with pps and srs - Opinion and marketing research - Self-weighting versus optimum design - Further reading

Part V: Miscellaneous Topics

Chapter 24. Miscellaneous Sampling Topics 389

Introduction - Multi-phase sampling - Sampling on successive occasions and panel sampling - Estimation of mobile populations - Inverse sampling - Estimation of rare events - Interpenetrating network of sub-samples - Simplified methods of variance computation - Other methods of estimating sampling variance: bootstrap and jackknife - Method of collapsed strata - Controlled selection - The use of Bayes' theorem in sampling - Use of focus groups - Randomized response technique - Line sampling and lattice sampling - Surveys on disability - Surveys on nutritional status of children - Surveys on the status of women - Estimation of HIV/AIDS infection

Chapter 25. Errors and Biases in Data and Estimates 423

Introduction - Coverage and content errors - Classification of errors in data and estimates - Simple statistical model - More complex models - Measurement of response errors - Control of non-sampling errors - Evaluation and control of sampling *versus* non-sampling errors - Evaluation and adjustment for non-response - Concluding remarks - Further reading - Exercises

Chapter 26. Planning, Execution and Analysis of Surveys	459
Introduction - Objectives of the survey - Legal basis - Publicity and cooperation of respondents - Budget and cost control - Project management - Administrative organization - Coordination with other inquiries - Cartographic (mapping) work - Tabulation programs - Methods of data collection - Questionnaire preparation - Survey design - Pilot inquiries and pre-tests - Selection and training of enumerators - Supervision - Processing of data - Preparation of reports - Further reading - Exercise	
Chapter 27. The Use of Personal Computers in Survey Sampling	485
Introduction - General issues - Sample selection - Data collection - Data editing and data entry - Combined data collection, editing and entry - Data tabulation - Variance estimation - Data dissemination - Integrated systems of data processing - Computer-assisted survey information system - Statistical analysis - Spreadsheets and graphics - Geographical information systems - Desktop publishing - Concluding remarks - Further reading	
Appendix I	List of notations and symbols 503
Appendix II	Elements of probability and proofs of some theorems in sampling 505
Appendix III	Statistical tables 529
Appendix IV	Hypothetical universe of 600 households in 30 villages in 3 States 535
Appendix V	Case Study: Indian National Sample Survey, 1964-5 539
Appendix VI	Multi-country survey programs 559
References	575
Answers to Exercises	605
Index of Names and Organizations	611
Index of Subjects	619
