<i>Preface</i>	<i>page</i>	xv
1 Models		1
1.1 Modelling		1
1.1.1 Principles		1
1.1.2 Stochastic Models		3
1.1.3 Formulation of a Model		3
1.1.4 Descriptive Models and Explanatory Models		4
1.1.5 Sampling Designs		5
1.2 Statistical Models		6
1.2.1 Definitions		6
1.2.2 A Priori Information		10
1.2.3 Specification Errors		13
1.3 Intermediate Forms		17
1.3.1 A Principle for Formulating Explanatory Models		17
1.3.2 Examples		18
1.3.3 Coherency Conditions		23
1.4 Conditional Models		24
1.4.1 Conditioning		24
1.4.2 Exogeneity		25
1.5 Dynamic Models		27
1.5.1 Definitions		27
1.5.2 Exogeneity and Causality		28
1.5.3 Formulation of Dynamic Models		33
1.6 Exercises		36
1.7 References		40
2 Statistical Problems and Decision Theory		43
2.1 Examples of Statistical Problems		43
2.2 Decision Rules		44

2.2.1	Space of Decisions	44
2.2.2	Nonrandomized Decision Rules	45
2.2.3	Randomized Decision Rules	48
2.3	Ordering Decision Rules	48
2.3.1	Correct Decisions	48
2.3.2	Loss Functions	49
2.3.3	Ordering Nonrandomized Decision Rules	51
2.3.4	Ordering Randomized Decision Rules	53
2.3.5	Admissible Decision Rules	54
2.4	An Example	54
2.4.1	The Model	55
2.4.2	The Estimation Problem	55
2.4.3	Risks Associated with Nonrandomized Decision Rules	55
2.4.4	Risks Associated with Randomized Decision Rules	56
2.5	Other Orderings of Decision Rules	59
2.5.1	Bayesian Approach	59
2.5.2	Empirical Bayesian Approach	61
2.5.3	Conditional Approach	62
2.6	Exercises	62
2.7	References	64
3	Statistical Information: Classical Approach	67
3.1	Sufficiency	68
3.1.1	Definition	68
3.1.2	Characterization of Sufficiency	70
3.1.3	Set of Sufficient Statistics	72
3.1.4	Some Properties of Sufficient Statistics	75
3.1.5	Conditioning	76
3.2	Ancillarity	79
3.2.1	Ancillary Statistics	79
3.2.2	Ancillarity and Sufficiency	80
3.3	Information Measures	81
3.3.1	Fisher Information	81
3.3.2	Kullback Information	87
3.4	Identification	88
3.4.1	Definitions	89
3.4.2	Some Examples	90
3.4.3	Application to Exponential Models	92
3.4.4	Identification and Information	95
3.5	Exercises	96

3.6	References	98
4	Bayesian Interpretations of Sufficiency, Ancillarity, and Identification	101
4.1	Sufficiency	102
4.1.1	Definition	102
4.1.2	Minimal Sufficiency	103
4.1.3	Improving Decision Rules	104
4.1.4	Partial Sufficiency and Bayesian Cut	105
4.2	Ancillarity	106
4.3	Identification	108
4.4	Exercises	109
4.5	References	110
5	Elements of Estimation Theory	113
5.1	Consequences of Decision Theory	113
5.1.1	Improving Nonrandomized Decision Rules	113
5.1.2	Quadratic Risk Functions	114
5.2	Estimation Principles	119
5.2.1	Invariance Principle	119
5.2.2	Unbiasedness Principle	121
5.2.3	Asymptotic Criteria	121
5.3	Search for Good Estimators	122
5.3.1	Search Within a Subclass	123
5.3.2	Criterion Optimization	123
5.3.3	Bayesian Methods	123
5.4	Exercises	124
5.5	References	126
6	Unbiased Estimation	127
6.1	Definitions	127
6.1.1	Unbiased Estimators	127
6.1.2	Existence of Unbiased Estimators	129
6.1.3	Unbiased Estimation and Sufficiency	130
6.1.4	Conditional Models	131
6.2	FDCR Inequality	131
6.3	Best Unbiased Estimators	134
6.3.1	Efficient Estimators	134
6.3.2	Examples of Efficient Estimators	139
6.3.3	Lehmann–Scheffé Theorem	140
6.3.4	Uniqueness of the Best Unbiased Estimator	143
6.4	Best Invariant Unbiased Estimators	144

6.4.1	Gauss–Markov Theorem	145
6.4.2	Best Quadratic Unbiased Estimators	146
6.5	Biased and Unbiased Estimators	150
6.5.1	Nonlinear Functions of an Unbiased Estimator	150
6.5.2	Inadmissible Best Unbiased Estimators	151
6.6	Exercises	154
6.7	References	156
7	Maximum Likelihood Estimation	159
7.1	Principle	159
7.1.1	Definition	159
7.1.2	Three Difficulties	160
7.1.3	An Interpretation of ML Estimation	165
7.2	Likelihood Equations	165
7.2.1	General Remarks	165
7.2.2	Unconstrained Maxima	167
7.2.3	Constrained Maxima	168
7.2.4	Concentrated Likelihood Function	170
7.3	Finite Sample Properties	175
7.3.1	Functional Invariance	175
7.3.2	Relationship with Sufficiency	178
7.3.3	Exponential Models	178
7.4	Asymptotic Properties	180
7.4.1	Existence and Strong Consistency	180
7.4.2	Asymptotic Distribution	183
7.4.3	Concentrated Likelihood Function	186
7.4.4	Direct Derivation of Asymptotic Properties	187
7.4.5	On the Regularity Conditions	189
7.5	marginal and conditional ml estimation	194
7.5.1	Principles	194
7.5.2	Examples	196
7.5.3	Asymptotic Properties	198
7.6	Exercises	203
7.7	References	207
8	M-Estimation	209
8.1	Definition and Asymptotic Properties	209
8.1.1	Definition	209
8.1.2	Existence and Consistency of M-Estimators	210
8.1.3	Asymptotic Normality	212
8.1.4	Quasi Generalized M-Estimators	214

8.2	Nonlinear Regression Models of Order 1 and 2	217
8.2.1	Definitions	217
8.2.2	Special Cases and Examples	218
8.2.3	First-Order and Second-Order Identification	220
8.3	Nonlinear Least Squares	222
8.3.1	The Method	222
8.3.2	Asymptotic Properties	224
8.3.3	Quasi Generalized Nonlinear Least Squares	227
8.3.4	Linearizing a Nonlinear Model	229
8.4	Pseudo Maximum Likelihood Estimation	234
8.4.1	ML Estimation With Specification Errors	234
8.4.2	Consistent PML Estimation of Order 1	238
8.4.3	Quasi Generalized PML Estimation	248
8.4.4	Consistent PML Estimation of Order 2	252
8.5	Estimation of a Conditional Median	255
8.5.1	The Model	255
8.5.2	Least Absolute Deviations Estimation	255
8.5.3	Maximum Score Estimation	264
8.5.4	Consistent Estimators of Parameters Appearing in the Conditional Median	267
8.6	Appendix	270
8.7	Exercises	272
8.8	References	274
9	Methods of Moments and Their Generalizations	277
9.1	Asymptotic Least Squares	279
9.1.1	Parameters of Interest and Auxiliary Parameters	279
9.1.2	The Estimation Principle	279
9.1.3	Best Asymptotic Least Squares Estimators	282
9.2	Examples	284
9.2.1	Relations of the Form $b = h(a)$	284
9.2.2	Estimation Using the Laplace Transform	284
9.2.3	Exponential Families	285
9.2.4	Estimating Equations Linear in the Parameters of Interest	289
9.3	Seemingly Linear Models	291
9.3.1	Consistency of OLS Estimators	291
9.3.2	Autoregressive Models With Autocorrelated Errors	293
9.3.3	Measurement Errors in the Variables	294

9.3.4	Simultaneous Equation Models	297
9.4	Instrumental Variable Estimation	299
9.4.1	Instrumental Variables	299
9.4.2	Instrumental Variable Estimators	301
9.4.3	Asymptotic Distributions of IV Estimators	303
9.4.4	Best Instrumental Variable Estimation	305
9.4.5	Two-Stage Least Squares as Best Asymptotic Least Squares	310
9.5	Generalized Methods of Moments	311
9.5.1	Definition	312
9.5.2	Best GMM Estimation	315
9.5.3	GMM Estimation After Linearization of the Estimating Equations	317
9.5.4	Nonlinear Two-Stage Least Squares	318
9.6	Exercises	320
9.7	References	322
10	Estimation Under Equality Constraints	325
10.1	Constraints	325
10.1.1	Explicit, Implicit, and Mixed Forms	325
10.1.2	Examples	327
10.1.3	Relation Between Explicit and Implicit Forms	329
10.2	Least Squares Under Linear Constraints	331
10.2.1	Explicit Linear Constraints	331
10.2.2	Implicit Linear Constraints	334
10.3	Asymptotic Properties	336
10.3.1	General Framework	337
10.3.2	Taylor Expansions of the First-Order Conditions	342
10.3.3	Asymptotic Distributions	345
10.4	Constrained Two-Step Estimation	350
10.4.1	Methods Based on Unconstrained Estimators	350
10.4.2	Methods Based on the Constraints	352
10.5	Examples	354
10.6	Exercises	356
10.7	References	359
11	Prediction	361
11.1	General Concepts	361
11.1.1	Statement of the Problem	361
11.1.2	Prediction Criteria	362

11.1.3 Simulations	365
11.2 Examples	367
11.2.1 Predictions in the Linear Model	367
11.2.2 Properties of Predictors in the Linear Model	369
11.2.3 Prediction Intervals	373
11.2.4 Prediction of a Nonlinear Function of Y_{n+1}	374
11.2.5 Prediction of a Latent Variable	375
11.2.6 Prediction in a Dynamic Model	377
11.3 Residuals	379
11.3.1 Residuals in an Exponential Model	379
11.3.2 Generalized Residuals	381
11.3.3 Simulated Residuals	385
11.4 Appendix	386
11.5 Exercises	388
11.6 References	390
12 Bayesian Estimation	393
12.1 The Bayesian Approach	393
12.1.1 Review	393
12.1.2 Prior Distributions	394
12.1.3 An Example of Bayesian Estimation	397
12.1.4 Diffuse Priors	399
12.2 Conjugate Priors	400
12.2.1 Models with Sufficient Statistics of Dimension Independent of the Number of Observations	400
12.2.2 Conjugate Priors	403
12.2.3 Posterior Distributions From Conjugate Priors	404
12.2.4 Examples	405
12.3 Asymptotic Results	413
12.3.1 Asymptotic Study of Posterior Distributions	413
12.3.2 Consequences	415
12.4 Diffuse Priors	416
12.4.1 Representations of a Noninformative Prior	416
12.4.2 Application to the Linear Model	422
12.4.3 Marginalizing	425
12.5 Best Linear Unbiased Bayesian Estimation	426
12.5.1 Existence and Form of the Optimal Estimator	426
12.5.2 Shrinkage Estimators	428

12.5.3 Bayesian Linear Estimators and Admissible Linear Estimators in the Classical Sense	429
12.6 Approximate Determination of Posterior Distributions	430
12.6.1 Approximating the Prior Distribution	431
12.6.2 Direct Approximations to Posterior Distributions	433
12.6.3 Numerical Integration	435
12.7 Appendix	437
12.8 Exercises	439
12.9 References	441
13 Numerical Procedures	443
13.1 Numerical Optimization	443
13.1.1 Gradient Methods	444
13.1.2 Gradient Methods and ML Estimation	452
13.1.3 Direct Search Methods	458
13.2 Fixed Point Methods	460
13.2.1 Principles	460
13.2.2 An Example: The Fair Algorithm	461
13.3 EM Algorithm	462
13.3.1 Definition	463
13.3.2 Application to Exponential Latent Models	464
13.3.3 Properties	466
13.4 Kalman Filter	467
13.4.1 State Space Models	468
13.4.2 Kalman Covariance Filter	470
13.4.3 Information Filter	474
13.4.4 Kalman Filter and Computation of Likelihood Functions of State Space Models	477
13.5 Prediction and Smoothing in State Space Models	480
13.5.1 Prediction	480
13.5.2 Smoothing	481
13.6 Recursive Least Squares and Recursive Residuals	484
13.7 Exercises	487
13.8 References	490
Appendix tables	492
Index	498
