

Contents

1	A Little Bit of Chaos by Chris Bills and Liz Bills	1
	1. Introduction	1
	2. Complex numbers	2
	3. The Argand diagram	4
	4. Iterations	4
	5. Prisoners and escapers	6
	6. Julia sets	9
	7. The Mandelbrot set	10
	8. Conclusion	11
2	Nightmare on Large Number Street by Bill Dalton	16
	1. Introduction	16
	2. Hilbert's 10th problem	17
	3. A Turing Machine	18
	4. Conflicting computations	22
	5. Binary numbers	24
	6. Limitations on storage in computers	26
3	Games of Chance by David Harries	32
	1. Starting activities	32
	2. Probability	33
	3. Expectation, arithmetic mean and standard deviation	37
	4. Final thoughts	42
	5. Discussion of experiments and questions	42
4	Weather by Brian Hoskins	49
	1. What is weather?	49
	2. The Earth and its atmosphere	49
	3. The Coriolis force	53
	4. The balance of forces	54
	5. Motion around pressure centres	55
	6. Some ideas on climate	56
5	Square Roots and Seventeengons by Frances Kirwan	60
	1. Regular polygons	60
	2. Construction of a regular pentagon	62

3. Constructible numbers and square roots	69
4. Polynomial equations	77
5. Fermat primes	81
6. Construction of the regular 17-gon using straight-edge and compasses	82
6 Discrete Mathematics and its Application to Ecology by Philip Maini	89
1. Introduction	89
2. The logistic map	93
3. Chaos	96
4. Summary	98
7 Channels, Pipes and Rivers by David Needham	103
1. Observations and examples	103
2. The flow of water	103
3. Mathematical model for flow in closed channels	105
4. Blockage in a closed channel	109
5. Flow in non-horizontal closed pipes	112
6. Applications	115
7. Open channel flow	118
8 Balloons and Bubbles by Michael Sewell	124
1. Experiments and questions	124
2. Equilibrium	124
3. Pressure on a patch	126
4. Equilibrium of a spherical patch	129
5. Tension in a soap film	131
6. Equilibrium of a patch of general shape	131
7. Equilibrium under zero excess pressure	132
8. Connected soap bubbles	135
9. Tension in rubber	137
10. Pressure peaks and pits	138
11. Comparison of tension and pressure values	140
12. Spherical and aspherical expansion	142
13. Cylindrical balloon	143
9 Dynamics of Dinosaurs by Michael Sewell	149
1. Introduction to some dinosaurs	149
2. Weighing dinosaurs	155
3. Dinosaur footprints	162
4. Speed of dinosaur	166
5. Athletic animals	170

10	Pythagorean Number Triples by David Stirling	176
	1. Introduction	176
	2. Diophantine equations	179
	3. Pythagorean triples	185
11	Plato, Polyhedra and Weather Forecasting by Andy White	194
	1. Setting the scene	194
	2. Weather forecasting	195
	3. Designing a new computer model	197
	4. Polygons: irregular and regular	198
	5. The Platonic solids	201
	6. Almost regular arrangements of points on a sphere	204
	7. Archimedean solids: the principle	205
	8. Archimedean solids: the practice	207
	9. Logic and visualization	209
	10. Euler's formula	209
12	Water Waves by Winifred Wood	216
	1. Introduction	216
	2. Waves in deep water	222
	3. Waves in shallow water	223
	4. Groups of waves	225
	5. Group speed	228
	6. Other sea waves	230
