Chapter	1	VARIABLES AND GRAPHS	1
		Statistics. Population and sample. Descriptive and inductive statistics. Discrete and continuous variables. Rounding of data. Scientific notation. Significant figures. Computations. Functions. Rectangular coordinates. Graphs. Equations. Inequalities. Logarithms. Antilogarithms.	
<hr/>			
Chapter	2	FREQUENCY DISTRIBUTIONS	27
		Raw data. Arrays. Frequency distributions. Class intervals and class limits. Class boundaries. The size or width of a class interval. The class mark. General rules for forming frequency distributions. Histograms and frequency polygons. Relative frequency distributions. Cumulative frequency distributions. Ogives. Relative cumulative frequency distributions. Percentage ogives. Frequency curves. Smoothed ogives. Types of curves.	
<hr/>			
Chapter	3	THE MEAN, MEDIAN, MODE AND OTHER MEASURES OF CENTRAL TENDENCY	45
		Index or subscript notation. Summation notation. Averages and measures of central tendency. The arithmetic mean. Weighted arithmetic mean. Properties of the arithmetic mean. Arithmetic mean computed from grouped data. The median. The mode. Empirical relation between mean, median and mode. The geometric mean. The harmonic mean. Relation between arithmetic, geometric, and harmonic means. The root mean square (r.m.s.). Quartiles, deciles and percentiles.	
<hr/>			
Chapter	4	THE STANDARD DEVIATION AND OTHER MEASURES OF DISPERSION	69
		Dispersion or variation. The range. The mean deviation or average deviation. The semi-interquartile range or quartile deviation. The 10-90 percentile range. The standard deviation. The variance. Short methods for computing the standard deviation. Properties of the standard deviation. Charlier's check. Sheppard's correction for variance. Empirical relations between measures of dispersion. Absolute and relative dispersion. Coefficient of variation. Standardized variable, standard scores.	
<hr/>			
Chapter	5	MOMENTS, SKEWNESS AND KURTOSIS	89
		Moments. Moments for grouped data. Relation between moments. Computation of moments for grouped data. Charlier's check and Sheppard's corrections. Moments in dimensionless form. Skewness. Kurtosis. Population moments, skewness, and kurtosis.	
<hr/>			
Chapter	6	ELEMENTARY PROBABILITY THEORY	99
		Classical definition of probability. Relative frequency definition of probability. Conditional probability. Independent and dependent events. Mutually exclusive events. Discrete probability distributions. Continuous probability distributions. Mathematical expectation. Relation between population and sample mean and variance. Combinatorial analysis. Fundamental principle. Factorial n . Permutations. Combinations. Stirling's approximation to $n!$. Relation of probability to point set theory.	

CONTENTS

		Page
Chapter 7	THE BINOMIAL, NORMAL AND POISSON DISTRIBUTIONS	122
	The binomial distribution. Some properties of the binomial distribution. The normal distribution. Some properties of the normal distribution. Relation between binomial and normal distributions. The Poisson distribution. Some properties of the Poisson distribution. Relation between binomial and Poisson distributions. The multinomial distribution. Fitting theoretical distributions to sample frequency distributions.	
<hr/>		
Chapter 8	ELEMENTARY SAMPLING THEORY	141
	Sampling theory. Random samples. Random numbers. Sampling with and without replacement. Sampling distributions. Sampling distribution of means. Sampling distribution of proportions. Sampling distribution of differences and sums. Standard errors.	
<hr/>		
Chapter 9	STATISTICAL ESTIMATION THEORY	156
	Estimation of parameters. Unbiased estimates. Efficient estimates. Point estimates and interval estimates. Reliability. Confidence interval estimates of population parameters. Confidence interval estimates for means. Confidence intervals for proportions. Confidence intervals for differences and sums. Confidence intervals for standard deviations. Probable error.	
<hr/>		
Chapter 10	STATISTICAL DECISION THEORY, TESTS OF HYPOTHESES AND SIGNIFICANCE	167
	Statistical decisions. Statistical hypotheses. Null hypotheses. Tests of hypotheses and significance. Type I and type II errors. Level of significance. Tests involving the normal distribution. One-tailed and two-tailed tests. Special tests. Operating characteristic curves. Power of a test. Control charts. Tests of significance involving sample differences. Tests involving the binomial distribution.	
<hr/>		
Chapter 11	SMALL SAMPLING THEORY	188
	Small samples. "Student's" t distribution. Confidence intervals. Tests of hypotheses and significance. The chi-square distribution. Confidence intervals for χ^2 . Degrees of freedom.	
<hr/>		
Chapter 12	THE CHI-SQUARE TEST	201
	Observed and theoretical frequencies. Definition of χ^2 . Significance tests. The chi-square test for goodness of fit. Contingency tables. Yates' correction for continuity. Simple formulas for computing χ^2 . Coefficient of contingency. Correlation of attributes. Additive property of χ^2 .	
<hr/>		
Chapter 13	CURVE FITTING AND THE METHOD OF LEAST SQUARES	217
	Relationship between variables. Curve fitting. Equations of approximating curves. Freehand method of curve fitting. The straight line. The method of least squares. The least square line. Non-linear relationships. The least square parabola. Regression. Applications to time series. Problems involving more than two variables.	

CONTENTS

	Page
<p>Chapter 14 CORRELATION THEORY</p> <p style="padding-left: 2em;">Correlation and regression. Linear correlation. Measures of correlation. The least square regression lines. Standard error of estimate. Explained and unexplained variation. Coefficient of correlation. Remarks concerning the correlation coefficient. Product-moment formula for the linear correlation coefficient. Short computational formulas. Regression lines and the linear correlation coefficient. Rank correlation. Correlation of time series. Correlation of attributes. Sampling theory of correlation. Sampling theory of regression.</p>	241
<hr/>	
<p>Chapter 15 MULTIPLE AND PARTIAL CORRELATION</p> <p style="padding-left: 2em;">Multiple correlation. Subscript notation. Regression equation. Regression plane. Normal equations for the least square regression plane. Regression planes and correlation coefficients. Standard error of estimate. The coefficient of multiple correlation. Change of dependent variable. Generalizations to more than three variables. Partial correlation. Relationships between multiple and partial correlation coefficients. Non-linear multiple regression.</p>	269
<hr/>	
<p>Chapter 16 ANALYSIS OF TIME SERIES</p> <p style="padding-left: 2em;">Time series. Graphs of time series. Characteristic movements of time series. Classification of time series movements. The analysis of time series. Moving averages. Smoothing of time series. Estimation of trend. Estimation of seasonal variations. Seasonal index. Deseasonalization of data. Estimation of cyclical variations. Estimation of irregular or random variations. Comparability of data. Forecasting. Summary of fundamental steps in time series analysis.</p>	283
<hr/>	
<p>Chapter 17 INDEX NUMBERS</p> <p style="padding-left: 2em;">Index number. Applications of index numbers. Price relatives. Properties of price relatives. Quantity or volume relatives. Value relatives. Link and chain relatives. Problems involved in computation of index numbers. The use of averages. Theoretical tests for index numbers. Notation. Simple aggregate method. Simple average of relatives method. Weighted aggregate method. Fisher's ideal index. The Marshall-Edgeworth index. Weighted average of relatives method. Quantity or volume index numbers. Value index numbers. Changing the base period of index numbers. Deflation of time series.</p>	313
<hr/>	
<p style="padding-left: 4em;">APPENDIX</p> <p style="padding-left: 6em;">I. Ordinates of the Standard Normal Curve</p> <p style="padding-left: 6em;">II. Areas under the Standard Normal Curve</p> <p style="padding-left: 6em;">III. Percentile Values for Student's <i>t</i> Distribution</p> <p style="padding-left: 6em;">IV. Percentile Values for the Chi-Square Distribution</p> <p style="padding-left: 6em;">V. Four-Place Common Logarithms</p> <p style="padding-left: 6em;">VI. Values of $e^{-\lambda}$</p> <p style="padding-left: 6em;">VII. Random Numbers</p> <p style="padding-left: 6em;">VIII. Derivation of Normal Equations for Least Square Line</p>	341
<p>INDEX</p>	351
