<b>List of Exercises</b>	<b>xi</b>
<b>Preface to the Second Edition</b>	<b>xiii</b>
<b>1 Scope and Nature of Queueing Theory</b>	<b>1</b>
<b>2 Review of Topics from the Theory of Probability and Stochastic Processes</b>	<b>9</b>
2.1 Random Variables	9
2.2 Birth-and-Death Processes	14
2.3 Statistical Equilibrium	19
2.4 Probability-Generating Functions	26
2.5 Some Important Probability Distributions	34
Bernoulli Distribution	34
Binomial Distribution	34
Multinomial Distribution	35
Geometric Distribution	36
Negative-Binomial (Pascal) Distribution	37
Uniform Distribution	38
Negative-Exponential Distribution	42
Erlangian (Gamma) Distribution	50
Poisson Distribution	64
2.6 Remarks	71
<b>3 Birth-and-Death Queueing Models</b>	<b>73</b>
3.1 Introduction	73
3.2 Relationship Between the Outside Observer's Distribution and the Arriving Customer's Distribution	77
3.3 Poisson Input, $s$ Servers, Blocked Customers Cleared: The Erlang Loss System	79

3.4	Poisson Input, $s$ Servers with Exponential Service Times, Blocked Customers Delayed: The Erlang Delay System	90
3.5	Quasirandom Input	102
3.6	Equality of the Arriving Customer's $n$ -Source Distribution and the Outside Observer's $(n-1)$ -Source Distribution for Birth-and-Death Systems with Quasirandom Input	105
3.7	Quasirandom Input, $s$ Servers, Blocked Customers Cleared: The Engset Formula	108
3.8	Quasirandom Input, $s$ Servers with Exponential Service Times, Blocked Customers Delayed	111
3.9	Summary	116
<b>4</b>	<b>Multidimensional Birth-and-Death Queueing Models</b>	<b>123</b>
4.1	Introduction	123
4.2	Product Solutions (Mixed Traffic, Queues in Tandem)	126
	Infinite-Server Group with Two Types of Customers	126
	Finite-Server Group with Two Types of Customers and Blocked Customers Cleared	128
	Queues in Tandem	132
4.3	Generating Functions (Overflow Traffic)	139
4.4	Macrostates (Priority Reservation)	150
4.5	Indirect Solution of Equations (Load Carried by Each Server of an Ordered Group)	153
4.6	Numerical Solution of State Equations by Iteration (Gauss-Seidel and Overrelaxation Methods)	158
4.7	The Equivalent Random Method	165
4.8	The Method of Phases	171
<b>5</b>	<b>Imbedded-Markov-Chain Queueing Models</b>	<b>176</b>
5.1	Introduction	176
5.2	The Equation $L = \lambda W$ ( Little's Theorem)	178
5.3	Equality of State Distributions at Arrival and Departure Epochs	185
5.4	Mean Queue Length and Mean Waiting Time in the $M/G/1$ Queue	189
5.5	Riemann-Stieltjes Integrals	192
5.6	Laplace-Stieltjes Transforms	197
5.7	Some Results from Renewal Theory	200
5.8	The $M/G/1$ Queue	208
	The Mean Waiting Time	209
	The Imbedded Markov Chain	210
	The Pollaczek-Khintchine Formula	216
	The Busy Period	228
5.9	The $M/G/1$ Queue with Finite Waiting Room	235
5.10	The $M/G/1$ Queue with Batch Arrivals	241
5.11	Optimal Design and Control of Queues: The $N$ -Policy and the $T$ -Policy	243
5.12	The $M/G/1$ Queue with Service in Random Order	253
5.13	Queues Served in Cyclic Order	261
5.14	The $GI/M/s$ Queue	267
5.15	The $GI/M/s$ Queue with Service in Random Order	275

<b>6</b>	<b>Simulation of Queueing Models</b>	<b>281</b>
6.1	Introduction	281
6.2	Generation of Stochastic Variables	284
6.3	Simulation Programming Languages	287
6.4	Statistical Questions	288
6.5	Examples	298
	Waiting Times in a Queue with Quasirandom Input and Constant Service Times	298
	Response Times in a Processor-Sharing Operating System	301
<b>7</b>	<b>Annotated Bibliography</b>	<b>308</b>
	<b>Appendix</b>	<b>315</b>
	<b>References</b>	<b>325</b>
	<b>Index</b>	<b>341</b>
